Web-based Data-Architect Practice Exam is customizable and you can adjust its time and type of Salesforce Certified Data Architect Data-Architect questions. It is compatible with all operating systems like Mac, Linux, IOS, Android and Windows, etc.

Salesforce Certified Data-Architect exam is a challenging exam that tests the knowledge and expertise of the candidate in various areas, including data modeling, data integration, data architecture, and data governance. Data-Architect Exam consists of multiple-choice questions and scenario-based questions, and it requires in-depth knowledge of the Salesforce platform and its capabilities.

Salesforce Certified Data Architect Sample Questions (Q17-Q22):

NEW QUESTION # 17

A customer wishes to migrate 700,000 Account records in a single migration into Salesforce. What is the recommended solution to migrate these records while minimizing migration time?

- A. Use Salesforce Soap API in serial mode.

- B. Use Salesforce Soap API in parallel mode.
- **C. Use Salesforce Bulk API in parallel mode.**
- D. Use Salesforce Bulk API in serial mode.

Answer: C

NEW QUESTION # 18

A customer is operating in a highly reputed industry and is planning to implement SF. The customer information maintained in SF, includes the following:

Personally, identifiable information (PII)

IP restrictions on profiles organized by Geographic location

Financial records that need to be private and accessible only by the assigned Sales associate.

User should not be allowed to export information from Salesforce.

Enterprise security has mandate access to be restricted to users within a specific geography and detail monitoring of user activity.

Which 3 Salesforce shield capabilities should a data architect recommend? Choose 3 answers:

- A. Event monitoring to monitor all user activities
- B. Prevent Sales users access to customer PII information
- **C. Transaction security policies to prevent export of SF Data.**
- **D. Encrypt Sensitive Customer information maintained in SF.**
- **E. Restrict access to SF from users outside specific geography**

Answer: C,D,E

Explanation:

The best Salesforce Shield capabilities for the customer are to restrict access to SF from users outside specific geography, implement transaction security policies to prevent export of SF data, and encrypt sensitive customer information maintained in SF.

Salesforce Shield is a set of security features that help protect enterprise data on the Salesforce platform. It includes three components: Event Monitoring, Platform Encryption, and Field Audit Trail. Restricting access to SF from users outside specific geography can be done using network-based security features, such as IP whitelisting or VPN. Transaction security policies can be used to define actions or notifications based on user behavior patterns, such as exporting data or logging in from an unknown device. Platform Encryption can be used to encrypt data at rest using a tenant secret key that is controlled by the customer.

NEW QUESTION # 19

How can an architect find information about who is creating, changing, or deleting certain fields within the past two months?

- A. Export the metadata and search it for the fields in question.
- B. Create a field history report for the fields in question.
- **C. Export the setup audit trail and find the fields in question.**
- D. Remove "customize application" permissions from everyone else.

Answer: C

Explanation:

The setup audit trail tracks changes made in your org's setup area for the past 180 days¹. You can export the setup audit trail and find the fields in question by filtering by action type, user, or date².

NEW QUESTION # 20

UC has the following system:

Billing system

Customer support system

CRM system

US has been having trouble with business intelligence across the different systems. Recently US implemented a master data management (MDM) solution that will be the system of truth for the customer records.

Which MDM data element is needed to allow reporting across these systems?

- **A. Global unique customer number.**
- B. Phone number.

- C. Email address.
- D. Full name.

Answer: A

Explanation:

The correct answer is A, global unique customer number. A global unique customer number is a data element that can uniquely identify each customer across different systems. It can be used as a key to link customer records from different sources and enable reporting across these systems. Email address, phone number, and full name are not reliable or consistent identifiers for customers, as they can change over time or be shared by multiple customers.

NEW QUESTION # 21

Universal Containers is experiencing frequent and persistent group membership locking issues that severely restricts its ability to manage manual and a automated updates at the same time.

What should a data architect do in order to restore the issue?

- A. Enable parallel sharing rule calculation.
- **B. Enable granular locking**
- C. Enable implicit sharing
- D. Enable defer sharing calculation

Answer: B

NEW QUESTION # 22
