Splunk Enterprise Certified Admin Sample Questions (Q33-Q38):

NEW QUESTION #33

What configuration file are remote Windows Management Instrumentation inputs defined in?

- A. None, the inputs are defined outside of Splunk.
- B. wmi_inputs.conf
- C. wmi.conf

• D. inputs.conf

Answer: C

Explanation:

In Splunk Enterprise, when collecting data from remote Windows machines using Windows Management Instrumentation (WMI), the configurations are defined in the wmi.conf file. This file specifies the parameters for connecting to WMI providers and defines the data inputs.

The wmi.conf file is located in the \$SPLUNK_HOME\etc\system\local\ directory. It contains stanzas that define global settings and input-specific configurations for WMI data collection. This setup allows Splunk to collect various types of data from remote Windows systems, such as event logs and performance metrics, without requiring a forwarder on the remote machine. Reference:

Monitor data through Windows Management Instrumentation (WMI) - Splunk Documentation wmi.conf - Splunk Documentation

NEW QUESTION #34

In which Splunk configuration is the SEDCMDused?

- A. inputs.conf
- B. transforms.conf
