Pass Guaranteed 2026 Juniper JN0-105: Newest Junos, Associate (JNCIA-Junos) Boot Camp

This format enables you to assess your JN0-105 test preparation with a Juniper JN0-105 certification exam. You can also customize your time and the kinds of Juniper JN0-105 Exam Questions of the Juniper JN0-105 practice test. ValidExam has formulated JN0-105 PDF questions for the convenience of Juniper JN0-105 test takers.

Juniper Junos, Associate (JNCIA-Junos) Sample Questions (Q91-Q96):

NEW QUESTION # 91

Which command modifier would you use to see all possible completions for a specific command?

- A. ?
- B. |
- C. detail
- D. extensive

Answer: A

Explanation:

In Junos OS, the ? command modifier is used to display all possible completions for a specific command. This helps users understand the available options and syntax for a command they are trying to use.

Reference:

"Use the ? command modifier to display all possible completions for a specific command."

NEW QUESTION # 92

You received a new Junos device and are configuring the system-related settings. You must configure this device for the current date and time on the US West coast. You have set the time zone to America /Los_Angeles, however the time and date did not change.

In this scenario, which two additional actions would satisfy this requirement? (Choose two.)

- A. Set the date and time setting manually.
- B. Configure a DNS server.
- C. Configure an NTP server.
- D. Reboot the device.

Answer: A,C

Explanation:

When configuring the system-related settings for the current date and time on a Junos device, especially for a specific time zone like America/Los_Angeles, and the time does not automatically adjust, two effective actions can be taken. Firstly, setting the date and time manually allows for immediate correction of the system clock. This can be done via the CLI with the appropriate set date and time command. Secondly, configuring the device to use an NTP server can provide ongoing synchronization with an accurate time source, ensuring that the device maintains the correct time and date automatically in the future, even in the case of restarts or minor drifts in the internal clock.

NEW QUESTION # 93

Click the Exhibit button.

```
[edit protocols ospf]
user@router# show
area 0.0.0.0 {
  interface all;
}
export [ policy1 policy2 policy3 ];
[edit routing-options]
user@router# show
static {
  route 10.10.10.0/24 next-hop 192.168.1.254;
}
```

Referring to the exhibit, OSPF has three export policies that match different static route prefixes. The 10.10.10.0/24 static route does not match any terms in the policy1 routing policy.

What happens next in this scenario?

- A. The static route is rejected by the default routing policy.
- B. The static route is rejected by the policy1 routing policy.
- C. The static route is evaluated by the policy2 routing policy.
- D. The static route is evaluated by the policy3 routing policy.

Answer: C

Explanation:

In Junos, when multiple policies are applied to a routing protocol for route export, the routes are evaluated in the order in which the policies are listed. In the exhibit, the OSPF configuration has three export policies listed: policy1, policy2, and policy3. The static route 10.10.10.0/24 does not match any terms in policy1; therefore, it is not rejected by policy1 but is instead passed on to the next

policy in the sequence, which is policy2.

If the static route matches a term in policy2 that permits the route, it will be exported into OSPF. If it does not match in policy2, it will then be evaluated by policy3. If there is no match in policy3 as well, and assuming there are no more policies listed, the route would then be subject to the default routing policy behavior, which typically rejects the route unless an explicit accept statement is present in the policies.

NEW QUESTION # 94

Which two statements about firewall filters are correct? (Choose two.)

- A. Firewall filters can match Layer 4 parameters.
- B. Firewall filters are stateful.
- C. Firewall filters are stateless.
- D. Firewall filters can match Layer 7 parameters.

Answer: A,C

Explanation:

Firewall filters in Junos OS are stateless, meaning they process each packet individually without regard to the state of a connection or sequence of packets. These filters can match various packet attributes, including those at Layer 4, such as TCP and UDP port numbers. This allows for granular control over traffic based on the type of service or application. Unlike stateless filters, stateful firewalls keep track of the state of active connections and make decisions based on the context of the traffic flow, which is not a capability of Junos firewall filters.

Additionally, Junos firewall filters primarily operate up to Layer 4 and do not natively inspect Layer 7 parameters, which involve application-level data.

NEW QUESTION # 95

Click the Exhibit button.

```
user@router> show route
inet.0: 13 destinations, 14 routes (13 active, 0 holddown, 0
hidden)
+ = Active Route, - = Last Active, * = Both
0.0.0.0/0          *[Static/5] 00:05:38
                  > to 172.29.1.1 via ge-0/0/3.0
```

Referring the exhibit, what does the highlighted number indicate?

- A. route preference is 5
- B. hop count is 5
- C. cost is 5
- D. metric is 5

Answer: A

Explanation:

In the exhibit shown, the highlighted number next to the route type (Static) within the square brackets indicates the route preference, also known as the administrative distance. In Junos, the route preference is a value that determines the priority of the route source. Lower numbers indicate a higher priority when the routing table is being calculated. The route preference is used to select the best route when multiple paths to the same destination exist from different routing sources. The number 5 is unusually low for a static route by default, suggesting it has been manually configured to override other route types.

NEW QUESTION # 96

.....

Our company is a professional certificate exam materials provider, we have occupied in the field for years, and we also famous for providing high-quality exam dumps. JN0-105 training materials have the questions and answers, and it will be convenient for you to check your answer. In addition, the pass rate for JN0-105 Exam Braindumps is 98.75%, and we can guarantee you pass the exam just one time. If you fail to pass the exam, we will refund your money. We also offer you free update for one year after purchasing, and the update version for JN0-105 training materials will be sent to you automatically.
