## ISACA CISM考古題推薦，CISM題庫分享

如果你選擇了報名參加ISACA CISM 認證考試，你就應該馬上選擇一份好的學習資料或培訓課程來準備考試。因為ISACA CISM是一個很難通過的認證考試，要想通過考試必須為考試做好充分的準備。

獲得CISM認證在信息安全管理領域表現出很高的專業知識和專業水平。它可能導致職業發展機會，提高信譽和更高的薪水。該認證得到了世界各地的許多組織和政府機構的認可，並且通常需要信息安全管理職位。總體而言，CISM認證是展示自己在信息安全管理方面的知識和技能並在該領域進一步發展職業的絕佳方法。

## 最新的 Isaca Certification CISM 免費考試真題 (Q902-Q907):

### 問題 #902

It is important to classify and determine relative sensitivity of assets to ensure that:

- A. countermeasures are proportional to risk.
- B. cost of controls is minimized.
- C. cost of protection is in proportion to sensitivity.
- D. highly sensitive assets are protected.

答案: A

解題說明:

Section: INFORMATION RISK MANAGEMENT

Explanation:

Classification of assets needs to be undertaken to determine sensitivity of assets in terms of risk to the business operation so that proportional countermeasures can be effectively implemented. While higher costs are allowable to protect sensitive assets, and it is

always reasonable to minimize the costs of controls, it is most important that the controls and countermeasures are commensurate to the risk since this will justify the costs. Choice B is important but it is an incomplete answer because it does not factor in risk. Therefore, choice D is the most important.

#### 問題 #903

A new port needs to be opened in a perimeter firewall. Which of the following should be the FIRST step before initiating any changes?

- A. Prepare an impact assessment report.
- B. Back up the firewall configuration and policy files.
- C. Conduct a penetration test.
- D. Obtain approval from senior management.

答案： A

解題說明：

An impact assessment report needs to be prepared first by providing the justification for the change, analysis of the changes to be made, the impact if the change does not work as expected, priority of the change and urgency of the change request. Choices B, C and D could be important steps, but the impact assessment report should be performed before the other steps.

#### 問題 #904

Which of the following practices completely prevents a man-in-the-middle (MitM) attack between two hosts?

- A. Use security tokens for authentication
- B. Enforce static media access control (MAC) addresses
- C. Use https with a server-side certificate
- D. Connect through an IPSec VPN

答案： D

解題說明：

Explanation

IPSec effectively prevents man-in-the-middle (MitM) attacks by including source and destination IPs within the encrypted portion of the packet. The protocol is resilient to MitM attacks. Using token-based authentication does not prevent a MitM attack; however, it may help eliminate reusability of stolen cleartext credentials. An https session can be intercepted through Domain Name Server (DNS) or Address Resolution Protocol (ARP) poisoning. ARP poisoning - a specific kind of MitM attack - may be prevented by setting static media access control (MAC) addresses. Nevertheless, DNS and NetBIOS resolution can still be attacked to deviate traffic.

#### 問題 #905

In addition to business alignment and security ownership, which of the following is MOST critical for information security governance?

- A. Reporting of security metrics
- B. Compliance with policies
- C. Auditability of systems
- D. Executive sponsorship

答案： C

#### 問題 #906

Which of the following enables compliance with a nonrepudiation policy requirement for electronic transactions?

- A. One-time passwords
- B. Encrypted passwords
- C. Digital signatures
