Many people want to be the competent people which can excel in the job in some area and be skillful in applying the knowledge to the practical working in some industry. But the thing is not so easy for them they need many efforts to achieve their goals. Passing the test SAFe-Practitioner certification can make them become that kind of people and if you are one of them buying our SAFe-Practitioner Study Materials will help you pass the test smoothly with few efforts needed. Our SAFe-Practitioner exam questions are valuable and useful and if you buy our product will provide first-rate service to you to make you satisfied.

Scrum SAFe-Practitioner (SAFe 5 Practitioner (SP)) Certification Exam is a globally recognized certification program designed to validate the knowledge and skills of individuals in implementing the Scaled Agile Framework (SAFe) methodology. SAFe Practitioner Exam (6.0) certification exam is intended for Agile practitioners who seek to enhance their skills in implementing SAFe across an enterprise. The SAFe 5 Practitioner certification exam is based on the latest version of the SAFe framework, and validates the knowledge and skills required to lead Agile teams in a large-scale enterprise.

The SAFe 5 Practitioner (SP) Certification Exam is a multiple-choice exam that consists of 45 questions. Candidates have 90 minutes to complete the exam and must score at least 35 out of 45 to pass. SAFe-Practitioner Exam covers a range of topics related to the SAFe framework, including agile principles and mindset, agile frameworks and methodologies, and SAFe roles and responsibilities.

And we are always in pursuit of high pass rate of SAFe-Practitioner practice quiz compared with our counterparts to gain more attention from potential customers.

Scrum SAFe Practitioner Exam (6.0) Sample Questions (Q84-Q89):

NEW QUESTION # 84

What is ART sync event at program level?

- **A. Combined PO Sync and Scrum of Scrums**
- B. There is no such event in SAFe
- C. Sync of all people on the ART
- D. Sync between the ScrumMasters and the Business Owners

Answer: A

NEW QUESTION # 85

There are Ten Core Competencies of Business Agility

- **A. FALSE**
- B. TRUE

Answer: A

NEW QUESTION # 86

The analyzing step of the Portfolio Kanban system has a new Epic with a completed Lean business case. What best describes the next step for the Epic?

- **A. It will be moved to the ready state in the Portfolio Kanban if it receives a 'go' decision from Lean Portfolio Management.**
- B. It will be implemented if it has the highest weighted shortest job first (WSJF) ranking
- C. It will remain in the analyzing step until one or more Agile Release Trains have the capacity to implement it.
- D. It will be implemented once the Epic Owner approves the Lean business case.

Answer: A

Explanation:

The Portfolio Kanban system is a method to visualize and manage the flow of portfolio Epics, from ideation through analysis, implementation, and completion. The analyzing step of the Portfolio Kanban system involves developing a Lean business case for the Epic and presenting it to Lean Portfolio Management (LPM) for approval. If the Epic receives a 'go' decision from LPM, it will be moved to the ready state in the Portfolio Kanban, where it will wait until one or more Agile Release Trains (ARTs) have the capacity to implement it. The other options are incorrect because:

* A. The Epic Owner does not have the authority to approve the Lean business case. Only LPM can make the final decision on whether to proceed with the Epic or not.

* C. The Epic will not remain in the analyzing step after receiving a 'go' decision from LPM. It will be moved to the ready state, where it will be prioritized using weighted shortest job first (WSJF) and other factors.

* D. The Epic will not be implemented based on its WSJF ranking alone. It will also depend on the availability and alignment of the ARTs that can deliver the Epic. References: 1: Portfolio Kanban - Scaled Agile Framework

NEW QUESTION # 87

What is scrum?

- A. A routine method of deploying deliverables to operations
- B. A methodology used to deliver usable and reliable solutions to the end user
- C. A process for continuously maintaining deployment readiness
- **D. A lightweight process for cross-functional, self-organized teams**

Answer: D

Explanation:

Scrum is a framework that enables teams to deliver value in complex and uncertain environments. Scrum is based on the agile manifesto, which values individuals and interactions, working software, customer collaboration, and responding to change. Scrum consists of three roles (Product Owner, Scrum Master, and Developers), five events (Sprint Planning, Daily Scrum, Sprint Review, Sprint Retrospective, and Sprint), and three artifacts (Product Backlog, Sprint Backlog, and Increment). Scrum teams work in short iterations called Sprints, where they plan, execute, and deliver a potentially releasable product increment. Scrum teams inspect and adapt their process and product continuously, using empirical feedback and data. Scrum teams are self-organized, meaning they decide how to best accomplish their work, and cross-functional, meaning they have all the skills needed to create a product increment.

NEW QUESTION # 88

What is used to describe functional and non-functional requirements?

- A. Features
- B. Enablers
- C. Milestones
- D. Architectural Runway

Answer: A

Explanation:

Features are used to describe functional and non-functional requirements in SAFe. Features are services that fulfill stakeholder needs and deliver value to the customer. They are typically 10-12 weeks of development effort and can span multiple iterations. Features are derived from the Program Backlog and are prioritized by the Product Management. Features are also used to define the PI Objectives and measure the business value delivered by the Agile Release Train (ART).
