## 100% Pass Quiz 2026 Salesforce Professional PDII: Platform Developer II Test Pass4sure

Where there is life, there is hope. Never abandon yourself. You still have many opportunities to counterattack. If you are lack of knowledge and skills, our PDII guide questions are willing to offer you some help. Actually, we are glad that our PDII Study Materials are able to become you top choice. Just look at the warm feedbacks from our PDII learning braindumps, we are very

popular in the whole market. And our PDII exam guide won't let you down.

Salesforce is a cloud computing company that specializes in customer relationship management (CRM) software. Salesforce has a certification program for individuals who want to demonstrate their expertise in using Salesforce technology. One of the most sought-after certifications in the program is the Salesforce Certified Platform Developer II (PDII).

## The benefit in Obtaining the PDII Exam Certification

- A candidate might have incredible IT skills. Employers that do the hiring need to make decisions based on limited information and as it always. When they view the official Salesforce Certified Platform Developer II certification, they can be guaranteed that a candidate has achieved a certain level of competence.
- After completing the Salesforce Certified Platform Developer II certification Candidate becomes a solid, well-rounded Salesforce Certified Platform Developer II.
- If the Candidate has the desire to move up to a higher-paying position in an organization. This certification will help as always.
- When an organization hiring or promotion an employee, then the decision is made by human resources. Now while Candidate may have an IT background, they do their decisions in a way that takes into record many different factors. One thing is candidates have formal credentials, such as the Salesforce Certified Platform Developer II.

## Salesforce Platform Developer II Sample Questions (Q107-Q112):

### NEW QUESTION # 107

Developer wishes to improve runtime performance of Apex calls by caching results on the client. What is the best way to implement this?

- A. Set a cookie in the browser for use upon return to the page.
- **B. Call the `setStorable()` method on the action in the JavaScript client-side code.**
- C. Decorate the server-side method with `@AuraEnabled(cacheable=true)`.
- D. Decorate the server-side method with `@AuraEnabled(storable=true)`.

**Answer: B**

### NEW QUESTION # 108

A company has a Request\_\_c object that has a lookup to the Opportunity object and a custom field. Status\_\_c, with values of Open, Closed, and Invalid. An Opportunity should not be allowed to be deleted if there are any Request\_\_c records related to it that have a Status\_\_c value of Open or 'Closed.' what is the optimal way to enforce the requirement to prevent deletion?

- **A. An Apex Trigger on Opportunity**
- B. A Process on Request\_\_c
- C. A Process on Opportunity
- D. An Apex Trigger on Request\_\_c

**Answer: A**

### NEW QUESTION # 109

A developer created an Apex class that updates an Account based on input from a Lightning web component that is used to register an Account. The update to the Account should only be made if it has not already been registered.

What should the developer do to ensure that users do not overwrite each other's updates to the same Account if they make updates at the same time?

- A.
- B.
- **C.**
- D.

**Answer: C**

Explanation:

When multiple users are updating the same record at the same time, there is a risk of overwriting each other's changes. Salesforce provides a mechanism called 'record locking' to prevent this from happening.

\* Option D is correct because including FOR UPDATE in the SOQL query locks the retrieved records for the duration of the transaction. This prevents other transactions from updating the record until the current transaction is complete, which is essential for avoiding race conditions where two users might overwrite each other's updates.

\* Option A is incorrect because while adding a try/catch block around the update operation is good practice for handling exceptions, it does not prevent overwrites from concurrent updates.

\* Option B is incorrect because using upsert instead of update does not address the problem of concurrent updates. The upsert operation is used to either insert a new record or update an existing one based on whether a record with a matching ID or external ID already exists.

\* Option C is incorrect because FOR UPDATE should be used in the SOQL query to lock the records, not in the SELECT statement itself.

### NEW QUESTION # 110

A developer needs to store variables to control the style and behavior of a Lightning Web Component.

Which feature can be used to ensure that the variables are testable in both Production and all Sandboxes?

- A. Custom setting
- B. Custom object
- C. Custom variable
- **D. Custom metadata**

**Answer: D**

Explanation:

Custom metadata types are the best feature for storing variables that control style and behavior of a Lightning Web Component.

Unlike custom settings, custom metadata is deployable and testable in both Production and all Sandboxes.

### NEW QUESTION # 111

A developer is building a Lightning web component that searches for Contacts. The component must communicate the search results to other unrelated Lightning web components, that are in different DOM trees, when the search completes.

What should the developer do to implement the communication?

- A. Fire a custom component event.
- B. Fire an application event.
- **C. Publish a message on a message channel.**
- D. Publish an event on an event channel.

**Answer: C**
