Our TestValid Terraform-Associate-004 exam certification training materials are real with a reasonable price. After you choose our Terraform-Associate-004 exam dumps, we will also provide one year free renewal service. Before you buy TestValid Terraform-Associate-004 certification training materials, you can download Terraform-Associate-004 free demo and answers on probation. If you fail the Terraform-Associate-004 exam certification or there are any quality problem of Terraform-Associate-004 exam certification training materials, we guarantee that we will give a full refund immediately.

HashiCorp Terraform-Associate-004 Exam Syllabus Topics:

Topic	Details
Topic 1	Core Terraform workflow: This domain focuses on the essential workflow steps: initializing directories, validating configurations, generating execution plans, applying changes, destroying infrastructure, and formatting code.
Topic 2	Terraform configuration: This domain covers writing Terraform code including resources and data blocks, using variables and outputs, handling complex types, creating dynamic configurations with expressions and functions, managing dependencies, implementing validation, and handling sensitive data.
Topic 3	HCP Terraform: This domain covers using HashiCorp Cloud Platform Terraform for infrastructure provisioning, collaboration and governance features, organizing workspaces and projects, and configuring integrations.
Topic 4	Infrastructure as Code (IaC) with Terraform: This domain covers the foundational concept of Infrastructure as Code and how Terraform enables managing resources across multiple cloud providers and services through a unified workflow.

Do you often envy the colleagues around you can successfully move to a larger company to achieve the value of life? Are you often wondering why your classmate, who has scores similar to yours, can receive a large company offer after graduation and you are rejected? In fact, what you lack is not hard work nor luck, but Terraform-Associate-004 Guide question. With Terraform-Associate-004 question torrent, you will suddenly find the joy of learning and you will pass the professional qualification exam very easily.

HashiCorp Certified: Terraform Associate (004) (HCTA0-004) Sample Questions (Q282-Q287):

NEW QUESTION # 282

All modules published on the official Terraform Module Registry have been verified by HashiCorp.

- A. False
- B. True

Answer: A

Explanation:

Not all modules published on the official Terraform Module Registry have been verified by HashiCorp. While HashiCorp verifies some modules, there are many community-contributed modules that are not verified. Verified modules have a "Verified" badge indicating that HashiCorp has reviewed them for security and best practices, but the registry also includes unverified modules.

Reference:

Terraform Module Registry documentation: Terraform Registry

NEW QUESTION # 283

You want to use API tokens and other secrets within your team's Terraform workspaces. Where does HashiCorp recommend you store these sensitive values? (Pick the 3 correct responses)

- A. In an HCP Terraform/Terraform Cloud variable, with the sensitive option checked.
- B. In a plaintext document on a shared drive.
- C. In HashiCorp Vault.
- D. In a terraform.tfvars file, checked into your version control system.
- E. In a terraform.tfvars file, securely managed and shared with your team.

Answer: A,C,E

Explanation:

Sensitive values such as API tokens should be stored in a secure way, either in Terraform Cloud variables marked as sensitive or in HashiCorp Vault. Storing secrets in version control systems or plaintext files is not recommended.

Terraform Cloud Environment Variables

NEW QUESTION # 284

Which of the following is not a benefit of adopting infrastructure as code?

- A. A Graphical User Interface
- B. Reusability of code
- C. Automation
- D. Versioning

Answer: A

Explanation:

Infrastructure as Code (IaC) provides several benefits, including the ability to version control infrastructure, reuse code, and automate infrastructure management. However, IaC is typically associated with declarative configuration files and does not inherently provide a graphical user interface (GUI). A GUI is a feature that may be provided by specific tools or platforms built on top of IaC principles but is not a direct benefit of IaC itself.

Reference = The benefits of IaC can be verified from the official HashiCorp documentation on "What is Infrastructure as Code with Terraform?" provided by HashiCorp Developer1.

NEW QUESTION # 285

Which option cannot be used to keep secrets out of Terraform configuration files?

- A. A -var flag
- B. Environment variables
- C. secure string
- D. A Terraform provider

Answer: C

Explanation:

A secure string is not a valid option to keep secrets out of Terraform configuration files. A secure string is a feature of AWS Systems Manager Parameter Store that allows you to store sensitive data encrypted with a KMS key. However, Terraform does not support secure strings natively and requires a custom data source to retrieve them. The other options are valid ways to keep secrets out of Terraform configuration files. A Terraform provider can expose secrets as data sources that can be referenced in the configuration. Environment variables can be used to set values for input variables that contain secrets. A -var flag can be used to pass values for input variables that contain secrets from the command line or a file. Reference = [AWS Systems Manager Parameter Store], [Terraform AWS Provider Issue #55], [Terraform Providers], [Terraform Input Variables]

NEW QUESTION # 286

It is _____ to change the Terraform backend from the default local backend to a different backend after performing your first terraform apply.

- A. impossible
- B. discouraged
- C. mandatory
- D. optional

Answer: D

Explanation:

Detailed Explanation:

* Rationale for Correct Answer: Terraform uses local state by default, but you can later configure another backend and migrate the existing state. Remote state is therefore an architectural choice rather than something that must be configured before the first apply. HashiCorp explicitly documents migration from local state to HCP Terraform.

* Analysis of Incorrect Options (Distractors):

* A: Changing to a remote backend is not inherently discouraged; remote state is commonly used for collaboration and centralized state management.

* B: Terraform does not require you to migrate away from the local backend.

* D: Backend migration is supported, so changing the backend is not impossible.

* Key Concept: Backend configuration and state migration.
