If you fail to pass the exam after you purchased JN0-105 preparation questions, you only need to provide your transcript to us, and then you can receive a full refund. Or we can free exchange two other exam materials for you if you have other exams to attend at the same time. So just buy our JN0-105 Exam Questions!

Juniper Junos, Associate (JNCIA-Junos) Sample Questions (Q79-Q84):

NEW QUESTION # 79
Exhibit
[edit system archival] user@router# show configuration {
transfer-on-commit; archive-sites {
"scp://user@172.15.100.2 : /archive" password## SECRET-DATA
"ftp://user@10.210.9.178:/archive" password "$9..."; ## SECRET-DATA
.
Referring to the exhibit, where are the configuration backup files stored?

- A. Files are storedto any site as selected by Junos internally.
- B. Files are storedto the SCP site and the FTP site simultaneously.
- C. Files are storedto the SCP site but if the transfer fails, then to theFTP site.
- D. Files are storedto the SCP site and the FTP site in a round-robinmanner.

Answer: B

Explanation:
In Junos OS, thearchivalconfiguration under[edit system]allows for the automatic backup of configuration files to designated locations upon commit. When multiplearchive-sitesare specified, as shown in the exhibit with both SCP and FTP sites listed, the device does not choose between them or use them in a round-robin manner. Instead, it attempts to transfer the configuration backup files to all specified sites simultaneously upon each commit. This ensures redundancy and increases the likelihood that a backup will be successfully stored even if one of the transfer methods or destinations fails.

NEW QUESTION # 80
How many login classes are assignable to a user account?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: B

Explanation:
https://www.juniper.net/documentation/us/en/software/junos/user-access-evo/user-access/topics/topic-map
/junos-os-login-class.html#:~:text=You%20can%20define%20any%20number,to%20an%20individual%
20user%20account.
In Junos OS, each user account can be assigned only one login class. Login classes in Junos OS define the permissions for users, controlling what they can access and modify within the system. This setup helps in maintaining a clear and secure access control mechanism.

NEW QUESTION # 81
Which two common routing policy actions affect the flow of policy evaluation? (Choose two.)

- A. next term
- B. next policy
- C. community
- D. next hop

Answer: A,B

Explanation:
In Junos OS routing policy evaluation, "next policy" (A) and "next term" (C) are common actions that affect the flow of policy evaluation. "Next policy" directs the evaluation to the next policy in the sequence, whereas
"next term" moves the evaluation to the next term within the current policy, allowing for granular control over routing decisions.

NEW QUESTION # 82

You are logged in to a Junos OS device with SSH and issued the show protocols | compare command in the configuration, but no output is shown.
Which statement is correct in this scenario?

- A. The command only works for interface configuration differences.
- B. Someone accidentally deleted the active configuration.
- C. You must commit the configuration before any output will be shown.
- D. There are no changes to the candidate configuration.

Answer: D

Explanation:
The show | compare command in Junos OS is used to display the differences between the candidate configuration and the active configuration. If no output is shown when you issue this command, it means that there are no changes between the candidate configuration and the active configuration. This indicates that the candidate configuration is identical to the active configuration, and thus no differences are displayed.
Reference: Juniper Networks Documentation on Configuration Management
"The show | compare command displays the differences between the candidate configuration and the active configuration. If there are no changes, no output is displayed."

NEW QUESTION # 83

Which command displays all IPv6 routes in the default routing instance?

- A. showroute table inet6.0
- B. showroute table inet.0
- C. showroute table inet.l
- D. showroute table inet6.1

Answer: A

Explanation:
In Junos OS, the command to display IPv6 routes in the default routing instance isshow route table inet6.0.
The routing tableinet6.0specifically holds IPv6 routes. The commandshow route table inet.0is used for IPv4 routes, andinet6.1orinet.l(assuminginet.lis a typo forinet.1) are not standard Junos routing tables for displaying IPv6 routes in the default routing instance.

NEW QUESTION # 84

......

The Juniper JN0-105 exam is one of the most valuable certification exams. The JN0-105 exam opens a door for beginners or experienced Juniper professionals to enhance in-demand skills and gain knowledge. JN0-105 credential is proof of candidates' expertise and knowledge.
