

# Get Updated Salesforce Mule-Arch-201 Exam Questions (2026)

**Top 5 Facts to Rely on Salesforce Mule-Arch-201 Practice Tests**

1. You get the actual Salesforce Mule-Arch-201 exam experience.
2. Time management becomes easy during the actual exam.
3. Valuable insights offer more improvement scope.
4. Rigorous Practice Makes you perfect about Salesforce Mule-Arch-201 syllabus domains.
5. Self-assessment provides self-satisfaction regarding the Mule-Arch-201 exam preparation.

Our Mule-Arch-201 questions pdf is up to date, and we provide user-friendly Mule-Arch-201 practice test software for the Salesforce Certified MuleSoft Platform Architect exam. Moreover, we are also providing money back guarantee on all of Salesforce Certified MuleSoft Platform Architect test products. If the Mule-Arch-201 braindumps products fail to deliver as promised, then you can get your money back. The Mule-Arch-201 Sample Questions include all the files you need to prepare for the Salesforce Mule-Arch-201 exam. With the help of the Mule-Arch-201 practice exam questions and test software, you will be able to feel the real Mule-Arch-201 exam scenario, and it will allow you to assess your skills.

Elementary Mule-Arch-201 practice engine as representatives in the line are enjoying high reputation in the market rather than some useless practice materials which cash in on your worries. We can relieve you of uptight mood and serve as a considerate and responsible company with excellent Mule-Arch-201 Exam Questions which never shirks responsibility. It is easy to get advancement by our Mule-Arch-201 study materials. On the cutting edge of this line for over ten years, we are trustworthy company you can really count on.

## Practice Mule-Arch-201 Exam Online | Mule-Arch-201 Study Guide Pdf

No one can beat us in terms of Salesforce Mule-Arch-201 exam prices. Download the Salesforce Mule-Arch-201 exam dumps after paying discounted prices and start this journey. You can study Mule-Arch-201 Exam Engine anytime and anyplace for the convenience our three versions of our Mule-Arch-201 study questions bring.

### Salesforce Certified MuleSoft Platform Architect Sample Questions (Q70-Q75):

#### NEW QUESTION # 70

An API implementation is updated. When must the RAML definition of the API also be updated?

- A. When the API implementation changes the structure of the request or response messages
- B. When the API implementation is optimized to improve its average response time
- C. When the API implementation is migrated from an older to a newer version of the Mule runtime
- D. When the API implementation changes from interacting with a legacy backend system deployed on-premises to a modern, cloud-based (SaaS) system

**Answer: A**

Explanation:

Correct Answer: When the API implementation changes the structure of the request or response messages

\*\*\*\*\*

>> RAML definition usually needs to be touched only when there are changes in the request/response schemas or in any traits on API.

>> It need not be modified for any internal changes in API implementation like performance tuning, backend system migrations etc..

#### NEW QUESTION # 71

Which two statements are true about the technology architecture of an Anypoint Virtual Private Cloud (VPC)?

Choose 2 answers

- A. Round-robin load balancing is used to distribute client requests across different applications
- B. By default, HTTP requests can be made from the public internet to workers at port 6091
- C. CIDR blocks are used
- D. Ports 8081 and 8082 are used
- E. Anypoint VPC is responsible for load balancing the applications

**Answer: B,C**

Explanation:

An Anypoint Virtual Private Cloud (VPC) provides a secure and private networking environment for MuleSoft applications, using specific architectural elements:

CIDR Blocks:

Anypoint VPCs utilize CIDR blocks to define IP ranges, allowing organizations to control and segment the VPC's IP address space.

Port 6091 for HTTP Requests:

By default, HTTP requests can be made to workers on port 6091 from the public internet, providing an accessible entry point unless additional restrictions are applied.

of Correct Answers (B, E):

CIDR blocks enable IP range management for VPCs, and port 6091 is the default public entry port, which is part of Anypoint VPC's default settings.

of Incorrect Options:

Option A (Ports 8081 and 8082) is incorrect; these are not default public ports for Anypoint VPC.

Option C (responsible for load balancing) is incorrect as load balancing requires a separate Dedicated Load Balancer (DLB).

Option D (round-robin load balancing) applies to DLBs, not directly to VPCs.

Reference

For more on VPC setup and networking, refer to MuleSoft documentation on VPC configurations and default port settings.

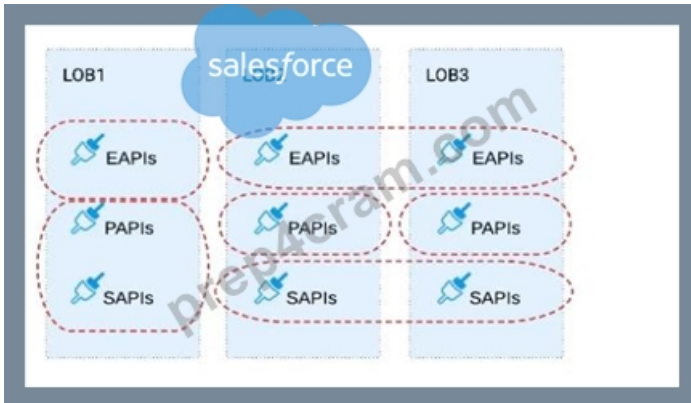

#### NEW QUESTION # 72

Refer to the exhibit.

Three business processes need to be implemented, and the implementations need to communicate with several different SaaS applications.

These processes are owned by separate (siloes) LOBs and are mainly independent of each other, but do share a few business entities. Each LOB has one development team and their own budget. In this organizational context, what is the most effective approach to choose the API data models for the APIs that will implement these business processes with minimal redundancy of the data models?

A) Build several Bounded Context Data Models that align with coherent parts of the business processes and the definitions of associated business entities

B) Build distinct data models for each API to follow established micro-services and Agile API-centric practices C) Build all API data models using XML schema to drive consistency and reuse across the organization D) Build one centralized Canonical Data Model (Enterprise Data Model) that unifies all the data types from all three business processes, ensuring the data model is consistent and non-redundant

- A. Option D
- B. Option C
- C. Option B
- D. Option A

**Answer: D**

Explanation:

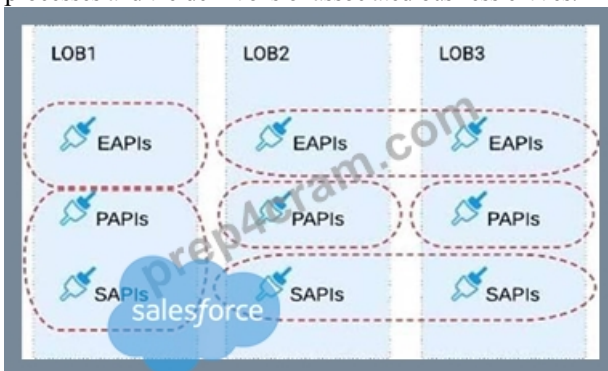

Correct Answer: Build several Bounded Context Data Models that align with coherent parts of the business processes and the definitions of associated business entities.

\*\*\*\*\*

>> The options w.r.t building API data models using XML schema/ Agile API-centric practices are irrelevant to the scenario given in the question. So these two are INVALID.

>> Building EDM (Enterprise Data Model) is not feasible or right fit for this scenario as the teams and LOBs work in silo and they all have different initiatives, budget etc.. Building EDM needs intensive coordination among all the team which evidently seems not possible in this scenario.

So, the right fit for this scenario is to build several Bounded Context Data Models that align with coherent parts of the business processes and the definitions of associated business entities.

**NEW QUESTION # 73**

What Mule application deployment scenario requires using Anypoint Platform Private Cloud Edition or Anypoint Platform for Pivotal Cloud Foundry?

- A. When it is required to make ALL applications highly available across multiple data centers
- **B. When regulatory requirements mandate on-premises processing of EVERY data item, including meta-data**
- C. When it is required that ALL APIs are private and NOT exposed to the public cloud
- D. When ALL backend systems in the application network are deployed in the organization's intranet

**Answer: B**

Explanation:

Correct Answer: When regulatory requirements mandate on-premises processing of EVERY data item, including meta-data.

\*\*\*\*\*

We need NOT require to use Anypoint Platform PCE or PCF for the below. So these options are OUT.

>> We can make ALL applications highly available across multiple data centers using CloudHub too.

>> We can use Anypoint VPN and tunneling from CloudHub to connect to ALL backend systems in the application network that are deployed in the organization's intranet.

>> We can use Anypoint VPC and Firewall Rules to make ALL APIs private and NOT exposed to the public cloud.

Only valid reason in the given options that requires to use Anypoint Platform PCE/ PCF is - When regulatory requirements mandate on-premises processing of EVERY data item, including meta-data.

#### NEW QUESTION # 74

True or False. We should always make sure that the APIs being designed and developed are self-servable even if it needs more man-day effort and resources.

- **A. TRUE**
- B. FALSE

**Answer: A**

Explanation:

Correct Answer: TRUE

\*\*\*\*\*

>> As per MuleSoft proposed IT Operating Model, designing APIs and making sure that they are discoverable and self-servable is VERY VERY IMPORTANT and decides the success of an API and its application network.

#### NEW QUESTION # 75

.....

The second version is the web-based format of the Salesforce Certified MuleSoft Platform Architect (Mule-Arch-201) practice test. Browsers such as Internet Explorer, Microsoft Edge, Firefox, Safari, and Chrome support the web-based practice exam. You don't have to install excessive plugins or software to attempt this Salesforce Certified MuleSoft Platform Architect (Mule-Arch-201) practice test.
