Are you on the way to pass the SPLK-1004 exam? Our SPLK-1004 exam questions will be the best choice for you. And if you still feel uncertain about the content, wondering whether it is the exact SPLK-1004 exam material that you want, you can free download the demo to check it out. You will be quite surprised by the convenience to have an overview just by clicking into the link, and you can experience all kinds of SPLK-1004 versions.

Splunk Core Certified Advanced Power User Sample Questions (Q26-Q31):

NEW QUESTION # 26

Which of the following can be used to access external lookups?

- A. Perl and Python
- B. Perl and binary executable
- C. Python and binary executable
- D. Python and Ruby

Answer: C

Explanation:

Splunk supports external lookups that enrich search results using scripts or binary executables. Python and binary executables are

commonly used for creating these external lookups, as Python is widely supported, and binary executables can handle performance-critical tasks.

NEW QUESTION # 27

What are the four types of event actions?

- A. eval, link, change, and clear
- B. stats, target, change, and clear
- C. stats, target, set, and unset
- D. eval, link, set, and unset

Answer: A

Explanation:

The four types of event actions in Splunk are eval, link, change, and clear (Option C). These actions can be used in dashboard panel configurations to dynamically interact with or manipulate event data based on user inputs or other criteria. Eval is used for calculating fields, link for creating hyperlinks, change for modifying field values, and clear for removing field values or other data elements.

NEW QUESTION # 28

Which command processes a template for a set of related fields?

- A. bin
- B. foreach
- C. xyseries
- D. untable

Answer: B

Explanation:

The foreach command in Splunk is used to apply a processing step to each field in a set of related fields, making it ideal for performing repetitive tasks across multiple fields without having to specify each field individually. This command can process a template of commands or functions to apply to each specified field, thereby streamlining operations that need to be applied uniformly across multiple data points.

NEW QUESTION # 29

Which of the following could be used to build a contextual drilldown?

- A. <set>and<unset>elements with adepend?attribute.
- B. \$earliest\$and\$latest\$tokens set by a global time range picker.
- C. <set>and<reset>elements with arejectsattribute.
- D. <set>and<offset>elements withdependsandrejectsattributes.

Answer: A

Explanation:

Comprehensive and Detailed Step by Step Explanation: To build a contextual drilldown in Splunk dashboards, you can use <set>and<unset>elements with adepend?attribute. These elements allow you to dynamically update tokens based on user interactions, enabling context-sensitive behavior in your dashboard.

Here's why this works:

* Contextual Drilldown: A contextual drilldown allows users to click on a visualization (e.g., a chart or table) and navigate to another view or filter data based on the clicked value.

* Dynamic Tokens: The <set>element sets a token to a specific value when a condition is met, while <unset>clears the token when the condition is no longer valid. The depend?attribute ensures that the behavior is conditional and context-aware.

Example:

```
<drilldown>
<set token="selected_product">$click.value$</set>
<unset token="selected_product" depend="?"></unset>
</drilldown>
```

In this example:

* When a user clicks on a value, the selected_producttoken is set to the clicked value (\$click.value\$).

* If the condition specified in depend? is no longer true, the token is cleared using <unset>.

Other options explained:

* Option B: Incorrect because \$earliest\$ and \$latest\$ tokens are related to time range pickers, not contextual drilldowns.

* Option C: Incorrect because <reset> is not a valid element in Splunk XML, and rejects is unrelated to drilldown behavior.

* Option D: Incorrect because <offset> is not used for building drilldowns, and depends/rejects do not apply in this context.

References:

* Splunk Documentation on Drilldowns: <https://docs.splunk.com/Documentation/Splunk/latest/Viz/DrilldownIntro>

* Splunk Documentation on Tokens: <https://docs.splunk.com/Documentation/Splunk/latest/Viz/UseTokenstoBuildDynamicInputs>

NEW QUESTION # 30

Which of these generates a summary index containing a count of events by productId?

- A. | stats count by productId
- B. sistats summary_index by productId
- C. | stats sum(productId)
- D. | stats count by productId

Answer: D

Explanation:

The stats count by productId command counts the number of events for each unique productId, making it the correct command for generating a summary index based on event counts.

NEW QUESTION # 31

.....

Some people want to study on the computer, but some people prefer to study by their mobile phone. Because our SPLK-1004 study torrent can support almost any electronic device, including iPod, mobile phone, and computer and so on. If you choose to buy our Splunk Core Certified Advanced Power User guide torrent, you will have the opportunity to use our study materials by any electronic equipment. We believe that our SPLK-1004 Test Torrent can help you improve yourself and make progress beyond your imagination. If you buy our SPLK-1004 study torrent, we can make sure that our study materials will not let you down
