Latest UiPath-AAAv1 Exam Testking & UiPath-AAAv1 Real Exams

Using free UiPath UiPath-AAAv1 dumps is a great way to prepare for the exam. UiPath Certified Professional Agentic Automation Associate (UiAAA) UiPath-AAAv1 dumps are updated regularly and contain an excellent course of action material. UiPath experts carefully design the dumps to help you pass the exam. If you want to be successful in your exam, you need to have a good understanding of the UiPath Certified Professional Agentic Automation Associate (UiAAA) UiPath-AAAv1 Certification.

UiPath Certified Professional Agentic Automation Associate (UiAAA) Sample Questions (Q10-Q15):

NEW QUESTION # 10

What is the primary recommendation for using <https://www.google.com/search?q=bpmn.uipath.com> to access the Maestro modeling canvas?

- A. Use <https://www.google.com/search?q=bpmn.uipath.com> only to import predefined process templates from Studio Web.
- B. Use <https://www.google.com/search?q=bpmn.uipath.com> as a sandbox since the tool does not offer implementation capabilities.
- C. Always use <https://www.google.com/search?q=bpmn.uipath.com> as the primary tool for modeling processes with full implementation features.
- D. Utilize <https://www.google.com/search?q=bpmn.uipath.com> exclusively for creating agentic processes with implementation capabilities.

Answer: B

Explanation:

is correct - the bpmn.uipath.com canvas is a lightweight sandbox environment for drafting and visualizing agentic processes, but does not include full implementation capabilities. It is part of UiPath's broader Maestro experience, designed for early-stage discovery, collaboration, and ideation.

Key characteristics:

- * Drag-and-drop BPMN modeling
- * Ability to outline agents, decisions, automations, escalations
- * Useful for collaborating with stakeholders before technical development begins
- * Lacks direct execution, tool integration, or runtime support

It is not a replacement for Studio Web or Automation Cloud, which are used for:

- * Full implementation
- * Connecting to tools, prompts, or systems
- * Deployment and testing

Option A is incorrect - implementation requires transition into Studio Web.

C is false - the tool is for modeling, not template import/export.

D misrepresents its role - it's not the full-featured modeling tool, but a discovery-phase sandbox.

Best practice: use bpmn.uipath.com to design collaboratively, then export or map the flow into Studio, or Maestro production canvas for build-out and testing.

NEW QUESTION # 11

How long does a key-value pair stored in Agent Memory remain available before it expires by default?

- A. 12 months
- B. 6 months
- C. 3 months
- D. Until the agent version is updated, after which key-value pairs are automatically cleared

Answer: A

Explanation:

C is correct - according to UiPath documentation, key-value pairs stored in Agent Memory persist for 12 months by default.

Agent Memory is a persistent storage layer allowing agents to:

- * Recall decisions or context across runs
- * Store user preferences, status, or temporary flags
- * Maintain statefulness without relying on external databases

This capability is especially useful for:

- * Omnichannel customer interactions
- * Preference-aware recommendations
- * Tracking previously taken actions for continuity

Although memory storage is long-lasting (12 months), developers can:

- * Manually reset or expire entries
- * Use different memory scopes (e.g., per-user, per-agent)
- * Design memory-aware flows for personalization

Option D is incorrect - memory is not auto-cleared on version updates.

A and B understate the retention policy - default expiration is clearly documented as 12 months unless changed manually.

Agent Memory is a powerful enabler of context-rich, stateful automations, especially for conversational or ongoing interactions.

NEW QUESTION # 12

A developer is implementing a few-shot structured prompt for an email classification task. The prompt includes examples of email subjects labeled with their respective classifications, such as "Spam" or "Work." What is the most important aspect to consider when selecting examples for the prompt?

- A. Use random and unrelated examples to test the prompt's robustness.
- B. Include examples with intentionally incorrect labels to improve training.
- C. Always use more than 10 examples, regardless of task complexity.
- D. Choose examples that are diverse, relevant, and typical of the task's expected input.

Answer: D

Explanation:

The correct answer is C- the most critical aspect of designing a few-shot prompt in UiPath's LLM-driven agent framework is selecting examples that are diverse, representative, and relevant to the actual data the agent will encounter in production.

In a few-shot structured prompt, examples are used to demonstrate a pattern the model should follow.

UiPath recommends:

- * Using realistic examples from actual user inputs or support tickets

- * Covering edge cases or variations in phrasing and tone

- * Matching the desired output structure exactly (e.g., Input: ..., Output: ...) These patterns help the LLM infer the task correctly and maintain consistency, especially when processing unstructured inputs like email subjects.

Option A is incorrect - introducing incorrect labels degrades performance and adds confusion.

B is wrong - the number of examples depends on the task complexity and token budget. Sometimes 3-5 is ideal.

D undermines task alignment - random examples reduce accuracy and coherence.

UiPath's Prompt Engineering best practices prioritize grounded, contextually rich inputs, particularly when automating classification tasks like spam detection, triage, or intent recognition. High-quality, task-aligned examples lead to more reliable, human-like agents.

NEW QUESTION # 13

When you want a connector field value to be inferred dynamically at run time, which input method should you select in the activity tool?

- A. Static value
- B. Clear value
- C. Prompt
- **D. Argument**

Answer: D

Explanation:

The correct answer is D- selecting "Argument" allows a field value in an activity (such as a connector or tool call) to be dynamically inferred at runtime, based on variables, agent state, or previous node outputs.

UiPath Autopilot™ and Studio Web use the "Argument" option in activity configuration to pass dynamic values, especially in agentic workflows where:

- * Outputs of one step must inform inputs of the next

- * Contextual reasoning or prompt outputs need to feed tool parameters

- * Escalation decisions or classifications affect API calls or record updates This is fundamental in making agent behavior adaptive and responsive to user context- a key trait of UiPath's agentic orchestration layer.

Other options:

- * A (Static value) is hardcoded

- * B (Clear value) wipes any existing input

- * C (Prompt) is used when engaging the LLM, not connectors

NEW QUESTION # 14

What type of agents can be invoked using the 'Start and wait for external agent' feature in UiPath Maestro?

- A. External agents like Salesforce or ServiceNow.
- B. Agents that do not require any input or output variables.
- **C. Agents configured exclusively within the same project.**
- D. Only UiPath Orchestrator robots.

Answer: C

Explanation:

C is the correct answer - the "Start and wait for external agent" feature in UiPath Maestro is used to invoke another agent that has been configured within the same project or automation environment.

This enables:

- * Agent-to-agent chaining

- * Modular design where complex tasks are offloaded to specialized agents

- * Return of results or outputs, once the external agent completes its task Agents must be:

- * Properly configured

- * Input/output ready

- * Available within the orchestration context of the same solution

Option A is incorrect - this feature is about agents, not robots.

B is wrong - external platforms like Salesforce are accessed via connectors, not as agents.

D is false - input/output parameters can and often should be used between agents.
