Mule-Arch-202 Latest Exam Cram, Mule-Arch-202 Valid Test Preparation

One of features of Mule-Arch-202 training materials of us is that we can help you pass the exam just one time, and we also pass guarantee and money back guarantee for you fail to pass the exam. You just need to send your failure scanned to us, and we will give you full refund. In addition, Mule-Arch-202 exam dumps contain both questions and answers, which can help you have a quickly check after you finish your practice. We also have online and offline chat service stuff, they possess the professional knowledge about the Mule-Arch-202 Training Materials, if you have any questions just contact us.

Salesforce Certified MuleSoft Platform Integration Architect Sample Questions (Q26-Q31):

NEW QUESTION # 26

An external web UI application currently accepts occasional HTTP requests from client web browsers to change (insert, update, or delete) inventory pricing information in an inventory system's database. Each inventory pricing change must be transformed and then synchronized with multiple customer experience systems in near real-time (in under 10 seconds).

New customer experience systems are expected to be added in the future. The database is used heavily and limits the number of SELECT queries that can be made to the database to 10 requests per hour per user.

How can inventory pricing changes synchronize with the various customer experience systems in near real-time using an integration mechanism that is scalable, decoupled, reusable, and maintainable?

- A. Write a Mule application with a Database On Table Row event source configured for the inventory pricing database, with the ID attribute set to an appropriate database column.
- **B. Add a trigger to the inventory-pricing database table so that for each change to the inventory pricing database, a stored procedure is called that makes a REST call to a Mule application.**
- C. Replace the external web UI application with a Mule application to accept HTTP requests from client web browsers.
- D. Write a Mule application with a Database On Table Row event source configured for the inventory pricing database, with the watermark attribute set to an appropriate database column.

Answer: B

NEW QUESTION # 27

A customer of Salesforce has used Platform Events to integrate their Salesforce instance with an external third-party Artificial Intelligence (AI) system. The AI system provides a prediction score for each lead that is received by Salesforce. Once the prediction score is received, the lead information is saved to Platform events for other processes.

The trigger on the Platform Events is failing once this was rolled out to Production.

What type of monitoring should the Integration Consultant have considered to monitor this integration?

- A. Set up debug logs for Platform Event triggers to monitor performance.
- **B. Monitor Platform Events created per hour limits across the Salesforce instance.**
- C. Monitor the volume of leads that are created in Salesforce.
- D. Validate the Platform Event definition matches leads definition.

Answer: B

NEW QUESTION # 28

An external REST client periodically sends an array of records in a single POST request to a Mule application's API endpoint. The Mule application must validate each record of the request against a JSON schema before sending it to a downstream system in the same order that it was received in the array.

Record processing will take place inside a router or scope that calls a child flow. The child flow has its own error handling defined.

Any validation or communication failures should not prevent further processing of the remaining records.

Which router or scope should be used in the parent flow, and which type of error handler should be used in the child flow in order to meet these requirements?

- A. Until Successful router in the parent flow
- B. Parallel For Each scope in the parent flow
- C. Choice router in the parent flow
- **D. For Each scope in the parent flow**

Answer: D

NEW QUESTION # 29

An API is being implemented using the components of Anypoint Platform. The API implementation must be managed and governed (by applying API policies) on Anypoint Platform.

What must be done before the API implementation can be governed by Anypoint Platform?

- A. The OAS definitions in the Design Center project of the API and the API implementation's corresponding Mule project in Anypoint Studio must be synchronized
- B. A RAML definition of the API must be created in API Designer so the API can then be published to Anypoint Exchange
- C. The API must be published to the organization's public portal so potential developers and API consumers both inside and outside of the organization can interact with the API
- **D. The API must be published to Anypoint Exchange, and a corresponding API Instance ID must be obtained from API Manager to be used in the API implementation**

Answer: D

NEW QUESTION # 30

Which of the following are fundamental features available to all Mule applications? (Choose Two)

- A. DataWeave transformations.
- B. Built-in modules for all external systems.
- C. Automatic data encryption.
- D. Custom exception strategies.

Answer: A,D

NEW QUESTION # 31

.....

In a new era of talent gradually saturated with their own advantages, how to reflect your ability? Perhaps the most intuitive way is to get the test Mule-Arch-202 certification to obtain the corresponding qualifications. However, the Mule-Arch-202 qualification examination is not so simple and requires a lot of effort to review. How to get the test certification effectively, I will introduce you to a product—the Mule-Arch-202 Learning Materials that tells you that passing the Mule-Arch-202 exam in a short time is not a fantasy. We have helped tens of thousands of candidates pass their Mule-Arch-202 exam with 99% pass rate.
