## PL-400 Valid Test Format, PL-400 Pdf Dumps

By unremitting effort and studious research of the PL-400 actual exam, our professionals devised our high quality and high PL-400 effective practice materials which win consensus acceptance around the world. They are meritorious experts with a professional background in this line and remain unpretentious attitude towards our PL-400 Preparation materials all the time. They are unsuspecting experts who you can count on.

### Get to know about the best source for the preparation of the exam:

Students who want to pass the PL-400 exam should consider the use of the Microsoft Official Academic Course (MOAC) that is offered by Microsoft. Remember that, this is an official course that provides a lot of information about this certification test and covers all the required topics and skills one needs to pass this specific exam. Marketing skills, solid knowledge related to the Windows operating system, and data management skills are some of the other skills you will learn from this course.

Aspirants can attend one of the several MOAC sessions in a particular region. Connectors are available with most of the Microsoft training center partners. All these resources have a lot of knowledge, but to read from all these resources is tricky, time taken, needs more focus, and hard work. So for your ease, our knowledgeable expert's team has arranged a set of scenario-based practice exams for the PL-400 Exam, which is the blend of all the resources described above. These practice exams are called **PL-400 Dumps**. Accounting students prefer to take the PL-400 VCE exam dumps for their exam preparation. This tool provides all the knowledge required to pass this exam.

Publish your exam result in the VCE demo, practice exam, and get certified quickly. Integrations of all learning resources and practice exams will help you pass your exam on the first try. The division of the practice test is according to the exam objectives. Plug-ins and a table of contents will help you get familiar with the learning process and material.

## The following skills are not required for the exam:

Knowledge of Windows Server operating systems and programming languages, Proficiency in designing and developing a web application, Proficiency in writing a JScript or VB script, Proficiency in using Visual Studio, Proficiency in developing NET Framework applications these are covered in **PL-400 exam dumps**. Experience with Windows Azure is not required but will be helpful when building solutions that integrate on-premise applications with services hosted in the cloud. Trial Microsoft Windows Azure account is required to take the Curriculum PL-400 Exam. Customizations performed on a Windows Server 2012 R2 machine are not permitted.

## Microsoft Power Platform Developer Sample Questions (Q42-Q47):

### NEW QUESTION # 42

You need to assign the minimum environmental security role to the appropriate users.

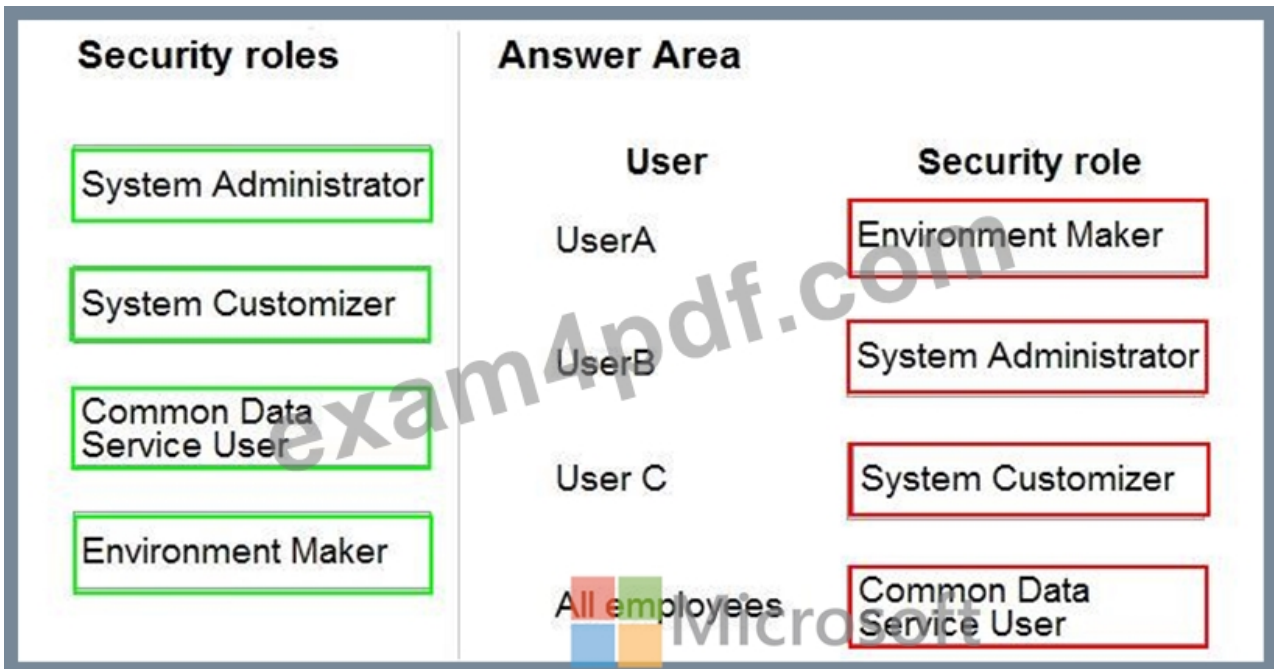

Which security roles should you use? To answer, drag the appropriate security roles to the correct users. Each security role may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Security roles	Answer Area	
System Administrator	<b>User</b>	<b>Security role</b>
System Customizer	UserA	Security role
Common Data Service User	UserB	Security role
Environment Maker	User C	Security role
	All employees	Security role

Answer:

Explanation:

### NEW QUESTION # 43

A company has a model-driven app.

A custom button on a form calls a JavaScript function that validates form data fields and creates a web basket.

The JavaScript function then displays a message to the user.

Users are located in the United States, which uses ISO Code 1033, and France, which uses ISO Code 1036.

Users in France report that the message displays in English.

You need to modify the RibbonDiffXml file to ensure that messages appear in the user's language.

How should you complete the CommandDefinition node? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

```

<CommandDefinitions>
  <CommandDefinition Id= "GenerateBasket.Command">
    <Actions>
      <JavaScriptFunction FunctionName=" generatebasket"
Library="$webresource:mb_/scripts/basket.js">
        <
          Value="
          <
            CrmParameter
            IntParameter
            StringParameter
          >
          <
            1033
            1036
            OrgLcid
            UserLcid
          >
        </JavaScriptFunction>
      </Actions>
    </CommandDefinition>
  </CommandDefinitions>

```

Answer:

Explanation:

```

<CommandDefinitions>
  <CommandDefinition Id= "GenerateBasket.Command">
    <Actions>
      <JavaScriptFunction FunctionName=" generatebasket'
Library="$webresource:mb_/scripts/basket.js">
        <
          Value="
          <
            CrmParameter
            IntParameter
            StringParameter
          >
          <
            1033
            1036
            OrgLcid
            UserLcid
          >
        </JavaScriptFunction>
      </Actions>
    </CommandDefinition>
  </CommandDefinitions>

```

Explanation:

```

<CommandDefinitions>
  <CommandDefinition Id= "GenerateBasket.Command">
    <Actions>
      <JavaScriptFunction FunctionName=" generatebasket
Library="$webresource:mb_/scripts/basket.js">
        <
          Value="
          <
            CrmParameter
            IntParameter
            StringParameter
          >
          <
            1033
            1036
            OrgLcid
            UserLcid
          >
        </JavaScriptFunction>
      </Actions>
    </CommandDefinition>
  </CommandDefinitions>

```

Box 1: CrmParameter

In addition to data values, you can retrieve client context information by using <CrmParameter>. You can use the following options as the value for the CrmParameter element: OrgName, OrgLcid, and UserLcid.

Box 2: UserLcid

userLCID is the language code of the current user.

Note: A locale is a set of user preference information related to the user's language. The locale determines how dates, times, currencies, and numbers are formatted, how items are alphabetically sorted, and how strings are compared. The locale identifier (LCID) is a 32-bit value that uniquely defines a locale.

#### NEW QUESTION # 44

You are a Power Apps app maker with administrative rights to Microsoft 365.

You create a canvas app that will be used by employees at your company. You plan to allow users to embed the app in Microsoft Teams. During testing, the following issues are reported:

- \* The app runs slowly when it runs in Microsoft Teams.
- \* Test users cannot add the personal app within Microsoft Teams.

You need to resolve the issues.

What should you do? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Issue	Resolution
The app runs slowly when it runs in Microsoft Teams.	<ul style="list-style-type: none"><li>Change settings in app to preload app</li><li>Use a Teams integration object</li></ul>
Test users cannot add the personal app within Microsoft Teams.	<ul style="list-style-type: none"><li>Download the custom app</li><li>Change permission for the custom app in Teams</li><li>Publish the customer app</li><li>Change custom app setup policy in Tems</li></ul>

Answer:

Explanation:

The screenshot shows the exam question interface with two issues and their corresponding resolution options. The first issue is 'The app runs slowly when it runs in Microsoft Teams.' with two resolution options: 'Change settings in app to preload app' and 'Use a Teams integration object'. The second issue is 'Test users cannot add the personal app within Microsoft Teams.' with four resolution options: 'Download the custom app', 'Change permission for the custom app in Teams', 'Publish the customer app', and 'Change custom app setup policy in Tems'. The correct answers are highlighted with dashed green boxes.

Explanation:

This screenshot is identical to the previous one, but the correct resolution options are highlighted with a grey background. For the first issue, 'Change settings in app to preload app' is highlighted. For the second issue, 'Change permission for the custom app in Teams' is highlighted.

Box 1: Change settings in app to preload app

You can optionally preload your app within Teams to increase performance.

Box 2: Change the permission for the custom app in Teams

As an admin, you can use app permission policies to control what apps are available to Microsoft Teams users in your organization. You can allow or block all apps or specific apps published by Microsoft, third-parties, and your organization. When you block an app, users who have the policy are unable to install it from the Teams app store.

You manage app permission policies in the Microsoft Teams admin center. You can use the global (Org-wide default) policy or create and assign custom policies. Users in your organization will automatically get the global policy unless you create and assign a custom policy. After you edit or assign a policy, it can take a few hours for changes to take effect.

**Global**

Description

**Microsoft apps**  
Choose which Teams apps published by Microsoft or its partners can be installed by your users.

☑ Allow all apps

**Third-party apps**  
Choose which Teams apps published by a third-party that can be installed by your users.

☑ Allow all apps

**Custom apps**  
Choose which custom apps can be installed by your users.

☑ Allow all apps

Save Cancel

**NEW QUESTION # 45**

You create an alternate key named AlternateKey1 on the Account entity. The definition for AlternateKey1 is shown in the following exhibit:

Display name	Name	Fields
AlternateKey1	cr27f_AlternateKey1	Account Number, Account Name

Use the drop-down menus to select the answer choice that answers each question based on the information presented in the graphic.

NOTE: Each correct selection is worth one point.

How is uniqueness enforced based on the definition of AlternateKey1?

The combination of Account Number and Account Name must be unique  
 Either Account Number or Account Name must be unique  
 Account Number and Account Name must both be unique

You must add a third field to AlternateKey1. What should you do?

Update AlternateKey1 and add the missing field  
 Delete AlternateKey1 and re-create it with all three fields  
 Create a new alternate key named AlternateKey2 with only the missing field

**Answer:**

Explanation:

How is uniqueness enforced based on the definition of AlternateKey1?

The combination of Account Number and Account Name must be unique  
 Either Account Number or Account Name must be unique  
 Account Number and Account Name must both be unique

You must add a third field to AlternateKey1. What should you do?

Update AlternateKey1 and add the missing field  
 Delete AlternateKey1 and re-create it with all three fields  
 Create a new alternate key named AlternateKey2 with only the missing field

Explanation:

How is uniqueness enforced based on the definition of AlternateKey1?

The combination of Account Number and Account Name must be unique  
 Either Account Number or Account Name must be unique  
 Account Number and Account Name must both be unique

You must add a third field to AlternateKey1. What should you do?

Update AlternateKey1 and add the missing field  
 Delete AlternateKey1 and re-create it with all three fields  
 Create a new alternate key named AlternateKey2 with only the missing field

Box 1: The combination of Account Number and Account Name must be unique With alternate keys you can now define a column in a Dataverse table to correspond to a unique identifier or unique combination of columns.

Box 2: Delete AlternateKey1 and re-create it with all three fields

Reference:

<https://docs.microsoft.com/en-us/powerapps/developer/data-platform/define-alternate-keys-entity>

**NEW QUESTION # 46**

You have two tables, account and contact, with a parent-child relationship. Records in the account table can be created in the UI or from an external system integrated with Dataverse by using an Azure Function.

When a user creates a record in the account table, a default record in the contact table must be created automatically.

You need to implement a process to create the contact records.

Solution: Create a custom API bound to the account table that uses a plug-in. Use the Organization service to create the contact record.

Does the solution meet the goal?

- A. Yes
- B. No

**Answer: B**
