PassLeader offer a demo version of the actual HP HPE7-A08 Exam Question only for customer satisfaction and the candidates can check the validity of the product before actually buying it.

HP HPE7-A08 Exam Syllabus Topics:

Topic	Details
Topic 1	• Install and Configure the Wired Network Solution: This domain evaluates the abilities of Network Engineers to provision and configure HPE Aruba Networking switches both via Aruba Networking Central and command-line interface. It covers physical switch setup, Layer 2 and Layer 3 configuration and validation, multicast features, security implementations, quality of service (QoS) settings, and integration of Aruba Networking solutions into existing environments.

Topic 2	• Manage, Maintain, Optimize, and Monitor the Wired Network Solution: This part measures the skills of Network Operations Engineers in managing and maintaining wired network infrastructures. It includes developing configuration management strategies, interpreting network operational data to make informed decisions, and programmatically auditing or configuring Aruba Networking switches to optimize performance and reliability.
Topic 3	• Troubleshoot the Wired Network Solution: Candidates in this section, typically Network Support Specialists, are tested on identifying common wired network failures such as IP or VLAN mismatches, hardware issues, or port misconfigurations. It also involves analyzing performance problems caused by QoS or configuration errors and formulating effective remediation plans to restore correct network operations.
Topic 4	• Create the Implementation Plan for the Wired Network Solution: This section measures the skills of Network Designers who focus on understanding the HPE switching portfolio and selecting the right products to match various customer requirements. Candidates must also demonstrate the ability to create detailed and effective implementation plans based on given designs or customer scenarios to ensure successful wired network deployments.

HPE Aruba Networking Switching Professional Exam Sample Questions (Q265-Q270):

NEW QUESTION # 265

A company has recently purchased a ClearPass AAA solution. Their network consists of AOS-CX switches at the access layer. The company is implementing a rollout of IoT devices for smart building management to control the lighting and HVAC systems. The network administrator is concerned about allowing secure access to these devices since they only support MAC-Auth. Which ClearPass feature should the administrator leverage to help determine that MAC address spoofing is not occurring for this group of devices?

- A. Downloadable user roles
- B. User-based tunneling
- **C. Device fingerprinting**
- D. RADIUS change of authorization

Answer: C

NEW QUESTION # 266

A multicast configuration on an HPE Aruba Networking CX 6300 VSF is used for a group address 239.0.0.1. The configuration is having issues, and the video streaming clients are not receiving the stream. What would be a possible root cause for the problems experienced?

- A. The selected multicast address will overlay with PIM-SM discovery address.
- **B. The selected multicast address will overlay with Link-Local Multicast address scope.**
- C. The IGMP-snooping is using version 2 configured for the SVI.
- D. The IGMP is enabled on the VLANs without any multicast traffic.

Answer: B

NEW QUESTION # 267

What is the purpose of the transit VLAN when implementing dynamic segmentation policies involving AOS-CX switches and an Aruba gateway solution?

- A. It identifies the VLAN that the switch will use when tunneling the traffic to the gateway
- B. It identifies the VLAN that the user traffic will be assigned to, whether the traffic is tunneled or locally switched
- C. It identifies the VLAN that the user traffic will be assigned to when it comes out of the tunnel and is forwarded by the gateway.
- D. It defines the VXLAN identifier to identified UBT traffic between the AOS-CX switches and the gateway solution

Answer: A

NEW QUESTION # 268

You've rebooted s-agg2 in a VSX configuration in an attempt to live-upgrade the cluster, and then you see this condition:

```
sw-aggi(config)# show vsx status
VSX Operational State
-----
ISL channel          : In-Sync
ISL mgmt channel     : operational
Config Sync Status   : sw_image_version_mismatch_error
NAE                  : sw_image_version_mismatch_error
HTTPS Server         : sw_image_version_mismatch_error

Attribute            Local                Peer
-----
ISL link             leg256                leg256
ISL version           2                    2
System MAC           02:00:00:00:00:01    02:00:00:00:00:01
Platform             8325                 8325
Software Version      GL.10.09.0010        GL.10.11.1021
Device Role           primary               secondary
```

What would be the correct way to live-upgrade the VSX cluster?

- A. Use the `update-software` option.
- B. Set the VSX to compatibility mode first, before rebooting the secondary switch.
- C. Use `vsx update-software` option.
- D. Always reload the primary switch first with the new image.

Answer: C

NEW QUESTION # 269

Which CLI command verifies network congestion by displaying per-port utilization statistics?

- A. `show qos utilization`
- B. `display congestion stats`
- C. `show bandwidth usage`
- D. `show interfaces traffic`

Answer: D

Explanation:

The `show interfaces traffic` command provides real-time data on port bandwidth usage, helping identify congested links that could be causing network slowdowns.

NEW QUESTION # 270

.....

Every browser such as Chrome, Mozilla Firefox, MS Edge, Internet Explorer, Safari, and Opera supports this format of HPE Aruba Networking Switching Professional Exam (HPE7-A08) mock exam. You can attempt the HPE Aruba Networking Switching Professional Exam (HPE7-A08) test multiple times to relieve exam stress and boosts confidence.
