NEW QUESTION # 75

You are configuring MPLS traffic-engineering tunnels in the core.

Which two ways exist for the tunnel path across the core? (Choose two)

- A. A zero bandwidth tunnel is not a valid option
- B. Tunnels can be configured with dynamic path or explicitly defined path
- C. The bandwidth statement creates a "hard" reservation on the link- The dynamic path option is supported only with IS-IS
- D. Tunnel links inherit IGP metrics by default unless overridden

Answer: B,D

Explanation:

MPLS traffic-engineering tunnels can be configured with dynamic paths or explicitly defined paths across the core network. Tunnel links inherit IGP (Interior Gateway Protocol) metrics by default unless overridden by configurations that specify explicit paths or other criteria for path selection. Dynamic path tunnels use IGP metrics and other parameters like bandwidth availability for automatic path calculation. References:
