EC-COUNCIL EC Council Certified Incident Handler (ECIH v3) Sample Questions (Q141-Q146):

NEW QUESTION # 141
In the lead-up to a major product launch, a technology company reviews its endpoint security strategy to safeguard intellectual property. What is the most essential element to incorporate into their incident response strategy for endpoints?

- A. Comprehensive encryption strategies for data at rest and in transit
- B. A robust endpoint detection and response (EDR) system with automated response
- C. An employee training program focused on phishing defense
- D. A dedicated crisis management team

Answer: B

Explanation:
The ECIH Endpoint Security module identifies EDR systems as the cornerstone of modern endpoint incident response. Advanced attacks targeting intellectual property often bypass traditional antivirus controls.
Option C is correct because EDR provides continuous monitoring, behavioral detection, rapid containment, and automated response across endpoints. This capability is critical during high-risk periods such as product launches.
Options A, B, and D are important but insufficient alone for real-time detection and response.
Therefore, deploying a robust EDR system is essential.

NEW QUESTION # 142
Which of the following techniques prevent or mislead incident-handling process and may also affect the collection, preservation, and identification phases of the forensic investigation process?

- A. Enumeration
- B. Footprinting
- C. Anti-forensics
- D. Scanning

Answer: C

Explanation:
Anti-forensics techniques are designed to prevent, mislead, or interfere with the incident handling process, affecting the collection, preservation, and identification phases of the forensic investigation process. These techniques include methods to erase, encrypt, or alter information, make data recovery difficult, hide data (e.
g., steganography), or otherwise obstruct forensic analysis and investigation efforts. Anti-forensics can significantly challenge the efforts of incident responders and forensic investigators in establishing the facts of a security incident or crime.
References:The Incident Handler (ECIH v3) courses and study guides discuss various challenges in digital forensics, including anti-forensics methods and their impact on the effectiveness of forensic investigations.

NEW QUESTION # 143
Which of the following incidents are reported under CAT -5 federal agency category?

- A. Scans/ probes/ Attempted Access
- B. Exercise/ Network Defense Testing
- C. Malicious code
- D. Denial of Service DoS

Answer: A

NEW QUESTION # 144
As an IT security officer, what is the first step you will take after discovering a successful email compromise?

- A. Report the incident to the organization's computer incident response team.
- B. Investigate similar hosts to determine whether the attacker has compromised other systems.
- C. Test the infected system to ensure security
- D. Isolate the compromised system or take steps to contain the attack.

Answer: D

NEW QUESTION # 145
Rachel, a first responder, finds a smartphone in an executive's office that is powered ON and actively displaying a messaging app with potentially incriminating information. She avoids locking the screen or turning off the device, photographs the current display, and collects its charging cable. She then safely packages the device and ensures it is kept charged during transport. What principle is Rachel applying in her evidence handling approach?

- A. Extracting deleted messages from the cache.
- B. Allowing device shutdown to save battery.
- C. Preserving screen-based digital evidence.
- D. Forcing a factory reset to preserve evidence.

Answer: C

Explanation:
Rachel is applying the forensic principle of preserving volatile and screen-based digital evidence, which is a core concept in the ECIH First Response and Digital Forensics modules. When a mobile device is powered on and unlocked, the data visible on the screen-such as messages, timestamps, sender details, and session states-constitutes volatile evidence that may be lost permanently if the device locks, reboots, or powers off.
ECIH guidance instructs first responders to document the live state of a device before any interaction that could alter its condition. Photographing the screen captures evidence that may not be recoverable later due to encryption or session expiration. Maintaining power ensures the device does not enter a locked or encrypted state during transport.
Option A refers to forensic analysis, not first response. Option C would destroy evidence and violates forensic principles. Option D risks loss of volatile data.
Preserving screen-based evidence ensures integrity, admissibility, and continuity of evidence, making Option B correct.
