最優質的最新C-CPI-2506題庫 & SAP C-CPI-2506最新考題：SAP Certified Associate - Integration Developer通過認證

PDFExamDumps提供的C-CPI-2506考古題是最全面的學習資料，這是一個可以讓您高效高速的掌握知識的題庫寶典。我們提供的SAP C-CPI-2506模擬測試題及答案和真實考試的題目及答案有95%的相似性，能保證您100%通過C-CPI-2506認證考試，滿足廣大考生需求。當您真的了解我們產品的可靠性之后，您會毫不猶豫的購買它，因為SAP C-CPI-2506是您最好的選擇，甚至是您未來職業生涯成功不可缺少的。

SAP C-CPI-2506 考試大綱：

主題	簡介
主題 1	Managing APIs: This section of the exam measures the skills of Solution Architects and focuses on managing APIs within the SAP ecosystem. It covers topics such as API provisioning, lifecycle management, security policies, and monitoring, ensuring candidates can handle APIs effectively for enterprise integration needs.
主題 2	SAP Event Mesh: This section of the exam measures the skills of Solution Architects and centers on using SAP Event Mesh to support event-driven integration. It highlights the importance of asynchronous communication, event publishing, and subscription models, allowing organizations to build scalable and decoupled systems.
主題 3	Implementing Cloud Integration: This section of the exam measures the skills of Integration Consultants and examines how cloud integration flows are designed and deployed. It emphasizes creating integration scenarios, handling connectivity, and applying best practices to build efficient, secure, and reliable integration processes in SAP's cloud environment.
主題 4	SAP Integration Suite Overview: This section of the exam measures the skills of Integration Consultants and covers the foundational concepts of the SAP Integration Suite. It provides an understanding of the suite's capabilities, its role in connecting applications, and its relevance in modern cloud-based integration scenarios.

最新的 SAP Certified Associate C-CPI-2506 免費考試真題 (Q46-Q51):

問題 #46

What kind of editor can you use to manipulate integration flows?

- A. Code editor
- **B. Graphical editor**
- C. Command-line editor

答案: B

解題說明:

In SAP Cloud Integration, integration flows are manipulated using a web-based graphical editor:

Allows drag-and-drop of adapters, mappings, scripts, and process steps.

Provides visual orchestration of message flows.

Command-line and raw code editors are not supported for iFlow design (though XML behind the iFlow exists, it is not directly edited by developers).

Thus, the editor is the Graphical editor.

問題 #47

Which of the following XSL statements selects each node in the source XML?

- A. `<xsl:template match='text()>`
- B. `<xsl:template match='/*>`
- **C. `<xsl:template match='*>`**
- D. `<xsl:template match='@*>`

答案: C

解題說明:

In XSLT mapping:

`<xsl:template match='*>` # Matches each node (any element node) in the XML source.

`<xsl:template match='/*>` # Matches only the root node.

`<xsl:template match='@*>` # Matches all attributes of the current element.

`<xsl:template match='text()>` # Matches text nodes only.

Thus, to select each node, the correct statement is `<xsl:template match='*>`.

問題 #48

Which of the following can you use for an XSLT mapping in an integration flow?

- A. HTML
- B. PHP
- C. JSON
- **D. XML**

答案： D

解題說明：

XSLT (Extensible Stylesheet Language Transformations) is a language designed to transform XML documents into other XML or text formats.

In SAP Cloud Integration, XSLT mapping can only be applied when the payload is in XML format.

For JSON payloads, you would first convert JSON # XML, then apply XSLT mapping.

Other options:

HTML # Not used for XSLT mapping.

JSON # Requires conversion first, cannot be directly used.

PHP # A programming language, unrelated to mappings.

問題 #49

In the SAP Integration Suite, where can you change the virtual host name?

- A. Configure ? APIs
- **B. Settings APIs**
- C. Design APIs
- D. Discover - APIs

答案： B

解題說明：

In the SAP Integration Suite, you can change the virtual host name in the Settings APIs. The Settings APIs allow you to configure various aspects of your API provider, such as the virtual host name, the base path, the authentication method, and the CORS settings. Reference: Integration Software | SAP Integration Suite, Modernize Integration with SAP Integration Suite | openSAP

問題 #50

Which part of the proxy URL is provided by the initial configuration step of the API Management?

- **A. Virtual host**
- B. Name of the API management
- C. Service name
- D. Version

答案： A

解題說明：

To set up the API Management capability within SAP Integration Suite, you must provide a virtual host as part of the initial configuration step. The virtual host is a host alias that identifies your organization and is used as the base URL of your API proxies. For example, if your virtual host is myorg, your API proxy URL will look like this:

<https://myorg.apimanagement.hana.ondemand.com/<api-name>>. The virtual host can be changed later in the API portal settings.
