Today is the best time to become competitive and updated in the market. You can do this easily. Just enroll in the SK0-005 exam and start SK0-005 exam preparation with CompTIA Server+ Certification Exam exam dumps. Download the Exams. Solutions CompTIA SK0-005 Exam Dumps after paying an affordable SK0-005 exam questions charge and start this journey without wasting further time.

CompTIA Server+ Certification Exam is a vendor-neutral certification, meaning that it is not tied to any particular server technology

or platform. CompTIA Server+ Certification Exam certification is recognized globally and is highly respected within the IT industry. It is an excellent way for professionals to demonstrate their expertise in server administration and to validate their skills to potential employers.

CompTIA Server+ Certification Exam Sample Questions (Q431-Q436):

NEW QUESTION # 431
A technician needs to set up a server backup method for some systems. The company's management team wants to have quick restores but minimize the amount of backup media required. Which of the following are the BEST backup methods to use to support the management's priorities? (Choose two.)

- A. Open file
- B. Full
- C. Archive
- D. Synthetic full
- E. Differential
- F. Incremental

Answer: D,E

NEW QUESTION # 432
A new company policy requires that any lost functionality must be restored within 24 hours in the event of a disaster. Which of the following describes this policy requirement?

- A. MTTR
- B. MTBF
- C. RPO
- D. RTO

Answer: D

Explanation:
Recovery Time Objective (RTO) refers to the target time set for the recovery of IT and business activities after a disaster has struck, which includes restoring server, network, and data access. The policy requirement mentioned in the question aligns with the definition of RTO, as it specifies the maximum allowable downtime or the time within which functionality must be restored. Mean Time Between Failures (MTBF) and Mean Time To Repair (MTTR) are metrics related to the reliability and repair times of systems but do not specifically pertain to disaster recovery time frames. Recovery Point Objective (RPO) describes the acceptable amount of data loss measured in time, not the restoration of operations.

NEW QUESTION # 433
A systems administrator is setting up a server on a LAN that uses an address space that follows the RFC 1918 standard. Which of the following IP addresses should the administrator use to be in compliance with the standard?

- A. 11.251.196.241
- B. 193.168.145.241
- C. 172.16.19.241
- D. 171.245.198.241

Answer: C

Explanation:
Explanation
The administrator should use 172.16.19.241 as an IP address to be in compliance with RFC 1918 standard.
RFC 1918 defines three ranges of IP addresses that are reserved for private internets, meaning they are not globally routable on the public Internet and can be used within an enterprise without any risk of conflict or overlap with other networks. These ranges are:
10.0.0.0 - 10.255.255.255 (10/8 prefix) 172.16.0.0 - 172.31.255.255 (172.16/12 prefix) 192.168.0.0 - 192.168.255.255 (192.168/16 prefix)
Out of these ranges, only 172.16.19.241 falls within one of them (172.16/12 prefix). The other options are either public IP addresses that belong to other organizations or networks (11.251.196.241, 171.245.198.241) or invalid IP addresses that do not

conform to any standard (193.168.145.241).

NEW QUESTION # 434

A server administrator notices the /var/log/audit/audit.log file on a Linux server is rotating loo frequently. The administrator would like to decrease the number of times the leg rotates without losing any of the information in the logs. Which of the following should the administrator configure?

- A. Decrease the duration of the log rotate cycle tor the audit. log file.
- B. Remove the tog rotate directive from the audit .log We configuration.
- C. Move the audit. leg files to a remote syslog server.
- D. increase the audit. log file size in the appropriate confutation file.

Answer: D

Explanation:

The audit.log file is a file that records security-related events on a Linux server, such as user login, file access, and system commands. The logrotate utility is a tool that rotates, compresses, and deletes old log files based on certain criteria, such as size, time, or frequency. To decrease the number of times the log rotates without losing any information, the administrator should increase the audit.log file size in the appropriate configuration file, such as /etc/logrotate.conf or /etc/logrotate.d/auditd. Verified References: [audit.log], [logrotate]

NEW QUESTION # 435

A server administrator must respond to tickets within a certain amount of time. The server administrator needs to adhere to the:

- A. MTTR.
- B. BIA.
- C. SLA.
- D. RTO.

Answer: C

Explanation:
Explanation
The server administrator needs to adhere to the Service Level Agreement (SLA) when responding to tickets within a certain amount of time. An SLA is a contract between a service provider and a customer that defines the quality, availability, and responsibilities of the service. An SLA may specify the response time for tickets, as well as other metrics such as uptime, performance, security, and backup frequency. Reference:
