

Pass Guaranteed Professional DOP-C02 - Valid Test AWS Certified DevOps Engineer - Professional Vce Free

2026 Latest BraindumpStudy DOP-C02 PDF Dumps and DOP-C02 Exam Engine Free Share: https://drive.google.com/open?id=1sEHLNk9epD7sQzJ5dh_EhA0mydEDB1UF

The Amazon DOP-C02 Dumps PDF File material is printable, enabling your off-screen study. This format is portable and easily usable on smart devices including laptops, tablets, and smartphones. Amazon DOP-C02 dumps team of professionals keeps an eye on content of the Amazon DOP-C02 Exam and updates its product accordingly. Our pdf is a very handy format for casual and quick preparation of the Amazon certification exam.

Facing the incoming DOP-C02 exam, you may feel stained and anxious, suspicious whether you could pass the exam smoothly and successfully. Actually, you must not impoverish your ambition. Our suggestions are never boggle at difficulties. It is your right time to make your mark. Preparation of exam without effective materials is just like a soldier without gun. You will be feeling be counteracted the effect of tension for our DOP-C02 practice dumps can relieve you of the anxious feelings.

>> Valid Test DOP-C02 Vce Free <<

Crack Your Exam with BraindumpStudy Amazon DOP-C02 Practice Questions

Not only we provide the most valued DOP-C02 study materials, but also we offer trustable and sincere after-sales services. As we all know, it's hard to delight every customer. But we have successfully done that. Our DOP-C02 practice materials are really reliable. In a word, our DOP-C02 Exam Questions have built good reputation in the market. We sincerely hope that you can try our DOP-C02 learning quiz. You will surely benefit from your correct choice.

Amazon AWS Certified DevOps Engineer - Professional Sample Questions (Q270-Q275):

NEW QUESTION # 270

A company uses AWS CodeArtifact to centrally store Python packages. The CodeArtifact repository is configured with the following repository policy.

A development team is building a new project in an account that is in an organization in AWS Organizations.

The development team wants to use a Python library that has already been stored in the CodeArtifact repository in the organization. The development team uses AWS CodePipeline and AWS CodeBuild to build the new application. The CodeBuild job that the development team uses to build the application is configured to run in a VPC. Because of compliance requirements the VPC has no internet connectivity.

The development team creates the VPC endpoints for CodeArtifact and updates the CodeBuild buildspec yaml file. However, the

development team cannot download the Python library from the repository.

Which combination of steps should a DevOps engineer take so that the development team can use Code Artifact? (Select TWO.)

- **A. Update the role that the CodeBuild project uses so that the role has sufficient permissions to use the CodeArtifact repository.**
- B. Share the CodeArtifact repository with the organization by using AWS Resource Access Manager (AWS RAM).
- C. Specify the account that hosts the repository as the delegated administrator for CodeArtifact in the organization.
- D. Update the repository policy's Principal statement to include the ARN of the role that the CodeBuild project uses.
- **E. Create an Amazon S3 gateway endpoint Update the route tables for the subnets that are running the CodeBuild job.**

Answer: A,E

Explanation:

"AWS CodeArtifact operates in multiple Availability Zones and stores artifact data and metadata in Amazon S3 and Amazon DynamoDB. Your encrypted data is redundantly stored across multiple facilities and multiple devices in each facility, making it highly available and highly durable." <https://aws.amazon.com/codeartifact>

/features/ With no internet connectivity, a gateway endpoint becomes necessary to access S3.

NEW QUESTION # 271

A business has an application that consists of five independent AWS Lambda functions.

The DevOps engineer has built a CI/CD pipeline using AWS CodePipeline and AWS CodeBuild that builds tests packages and deploys each Lambda function in sequence. The pipeline uses an Amazon EventBridge rule to ensure the pipeline starts as quickly as possible after a change is made to the application source code.

After working with the pipeline for a few months the DevOps engineer has noticed the pipeline takes too long to complete.

What should the DevOps engineer implement to BEST improve the speed of the pipeline?

- **A. Modify the CodePipeline configuration to run actions for each Lambda function in parallel by specifying the same runOrder.**
- B. Modify the CodeBuild projects within the pipeline to use a compute type with more available network throughput.
- C. Modify each CodeBuild project to run within a VPC and use dedicated instances to increase throughput.
- D. Create a custom CodeBuild execution environment that includes a symmetric multiprocessing configuration to run the builds in parallel.

Answer: A

Explanation:

<https://docs.aws.amazon.com/codepipeline/latest/userguide/reference-pipeline-structure.html> AWS doc: "To specify parallel actions, use the same integer for each action you want to run in parallel. For example, if you want three actions to run in sequence in a stage, you would give the first action the runOrder value of 1, the second action the runOrder value of 2, and the third the runOrder value of 3. However, if you want the second and third actions to run in parallel, you would give the first action the runOrder value of 1 and both the second and third actions the runOrder value of 2."

NEW QUESTION # 272

A company is developing a web application that runs on Amazon EC2 Linux instances. The application requires monitoring of custom performance metrics. The company must collect metrics for API response times and database query latency across multiple instances. Which solution will generate the custom metrics with the LEAST operational overhead?

- **A. Install the Amazon CloudWatch agent on the instances. Configure the agent to collect the custom metrics. Instrument the application to send the metrics to the agent.**
- B. Use Amazon Managed Service for Prometheus to scrape the custom metrics from the application. Use the Amazon CloudWatch agent to forward the metrics to CloudWatch.
- C. Create a custom AWS Lambda function that polls the application endpoints and database at regular intervals. Program the Lambda function to calculate the custom metrics and to send the metrics to Amazon CloudWatch by using PutMetricData API calls.
- D. Implement custom logging in the application code to record the custom metrics. Use Amazon CloudWatch Logs Insights to extract and analyze the metrics.

Answer: A

NEW QUESTION # 273

A company has a guideline that every Amazon EC2 instance must be launched from an AMI that the company's security team produces. Every month the security team sends an email message with the latest approved AMIs to all the development teams. The development teams use AWS CloudFormation to deploy their applications. When developers launch a new service they have to search their email for the latest AMIs that the security department sent. A DevOps engineer wants to automate the process that the security team uses to provide the AMI IDs to the development teams. What is the MOST scalable solution that meets these requirements?

- A. Direct the security team to use a CloudFormation stack to create an AWS CodePipeline pipeline that builds new AMIs and places the latest AMI ARNs in an encrypted Amazon S3 object as part of the pipeline output. Instruct the developers to use a cross-stack reference within their own CloudFormation template to obtain the S3 object location and the most recent AMI ARNs.
- **B. Direct the security team to use Amazon EC2 Image Builder to create new AMIs and to place the AMI ARNs as parameters in AWS Systems Manager Parameter Store. Instruct the developers to specify a parameter of type SSM in their CloudFormation stack to obtain the most recent AMI ARNs from Parameter Store.**
- C. Direct the security team to use Amazon EC2 Image Builder to create new AMIs and to create an Amazon Simple Notification Service (Amazon SNS) topic so that every development team can receive notifications. When the development teams receive a notification, instruct them to write an AWS Lambda function that will update their CloudFormation stack with the most recent AMI ARNs.
- D. Direct the security team to use CloudFormation to create new versions of the AMIs and to list the AMI ARNs in an encrypted Amazon S3 object as part of the stack's Outputs Section. Instruct the developers to use a cross-stack reference to load the encrypted S3 object and obtain the most recent AMI ARNs.

Answer: B

Explanation:

<https://docs.aws.amazon.com/AWSCloudFormation/latest/UserGuide/dynamic-references.html>

NEW QUESTION # 274

A company has deployed an application in a single AWS Region. The application backend uses Amazon DynamoDB tables and Amazon S3 buckets.

The company wants to deploy the application in a secondary Region. The company must ensure that the data in the DynamoDB tables and the S3 buckets persists across both Regions. The data must also immediately propagate across Regions. Which solution will meet these requirements with the MOST operational efficiency?

- A. Implement S3 Batch Operations copy jobs between the primary Region and the secondary Region for all S3 buckets. Convert the DynamoDB tables into global tables. Set the secondary Region as the additional Region.
- **B. Implement two-way S3 bucket replication between the primary Region's S3 buckets and the secondary Region's S3 buckets. Convert the DynamoDB tables into global tables. Set the secondary Region as the additional Region.**
- C. Implement S3 Batch Operations copy jobs between the primary Region and the secondary Region for all S3 buckets. Enable DynamoDB streams on the DynamoDB tables in both Regions. In each Region, create an AWS Lambda function that subscribes to the DynamoDB streams. Configure the Lambda function to copy new records to the DynamoDB tables in the other Region.
- D. Implement two-way S3 bucket replication between the primary Region's S3 buckets and the secondary Region's S3 buckets. Enable DynamoDB streams on the DynamoDB tables in both Regions. In each Region, create an AWS Lambda function that subscribes to the DynamoDB streams. Configure the Lambda function to copy new records to the DynamoDB tables in the other Region.

Answer: B

Explanation:

The company needs multi-Region data persistence with immediate propagation and minimal operational overhead. For S3, the correct mechanism is S3 replication (Cross-Region Replication or Same-Region Replication), which continuously and asynchronously replicates new objects as they are written. Configuring two-way replication between the primary and secondary Region buckets ensures that objects written in either Region are replicated to the other automatically without custom code. For DynamoDB, the native solution for multi-Region replication is DynamoDB global tables. Global tables provide multi-master, multi-Region replication with low-latency reads and writes in each Region and automatic propagation of changes. Converting existing tables into global tables and adding the secondary Region as a replica gives immediate, managed cross-Region replication with minimal maintenance.

Option A combines these two fully managed features: two-way S3 replication and DynamoDB global tables.

This yields the highest operational efficiency.

Options B, C, and D rely on S3 Batch Operations or DynamoDB Streams + Lambda to manually copy data cross-Region. These approaches add complexity, custom code, and operational risk, and they are less suitable when AWS provides managed replication mechanisms specifically designed for this purpose.

Therefore, Option A is the correct and most efficient solution.

NEW QUESTION # 275

.....

The pass rate for DOP-C02 learning materials is 98.75%, and you can pass the exam successfully by using the DOP-C02 exam dumps of us. We also pass guarantee and money back guarantee if you fail to pass the exam, and the refund money will be returned to your payment account. The DOP-C02 Learning Materials are famous for their high-quality, and if you choose, they can not only improve your ability in the process of learning but also help you get the certificate successfully. Choose us, and you will never regret.

Valid DOP-C02 Test Voucher: https://www.braindumpstudy.com/DOP-C02_braindumps.html

Where else can you find an Valid DOP-C02 Test Voucher study pack with so many possibilities?, Without doubt, you will get a higher salary if you have a DOP-C02 certification or you can enter into a bigger company, It is the short version of our official DOP-C02 exam braindumps, Amazon Valid Test DOP-C02 Vce Free We will be your best friend to help you achieve success, Since 2006, we serve more than 76893 candidates and most of them get wonderful scores with our DOP-C02 real dumps.

Internet layer—This layer is responsible for encapsulating data DOP-C02 packets into Internet datagrams, At the prompt, type `print Single quotes protect double quotes" in output.` and press Enter.

Free PDF Quiz 2026 Amazon DOP-C02: AWS Certified DevOps Engineer - Professional Perfect Valid Test Vce Free

Where else can you find an AWS Certified Professional study pack with so many possibilities?, Without doubt, you will get a higher salary if you have a DOP-C02 Certification or you can enter into a bigger company.

It is the short version of our official DOP-C02 exam braindumps, We will be your best friend to help you achieve success, Since 2006, we serve more than 76893 candidates and most of them get wonderful scores with our DOP-C02 real dumps.
