최신 HCIP-Video Conference H11-861_V4.0 무료샘플문제 (Q27-Q32):

질문 # 27

In an SVC hybrid conference (scheduled on the SFU and IAU), when an AVC participant views continuous presence of an SVC participant, dynamic codec resources on the IAU are consumed. When an AVC participant views continuous presence of other AVC participants, no dynamic codec resources are consumed.

- A. FALSE
- B. TRUE

정답: B

설명:

Displaying SVC streams to AVC endpoints requires IAU decoding and encoding, consuming dynamic codec resources; forwarding native AVC streams uses SFU without engaging IAU resources.

질문 # 28

FILL in BLANK

The stream transmission speed of a digitalized 1080p 60 fps analog TV signal is around _____ Mbit/s. (Assume that a pixel is 24-bit and enter an integer.)

정답:

설명:

2986

Explanation:

Uncompressed 1080p at 60 fps has $1920 \times 1080 = 2,073,600$ pixels per frame. At 24 bits per pixel, that's $2,073,600 \times 24 = 49,766,400$ bits per frame. Multiplied by 60 fps gives 2,985,984,000 bit/s, which is approximately 2986 Mbit/s.

질문 # 29

In the SIP protocol, the Via header field indicates the route of the subsequent response message.

- A. FALSE
- B. TRUE

정답: B

설명:

The Via header tracks each hop of the request and is used to guide the response back along the same path.

질문 # 30

Which of the following statements are true about personal virtual meeting room (VMR) provisioning?

- A. The SMC can provision personal VMRs to conference users one by one or in batches.
- B. The SMC can provision personal VMRs to conference rooms one by one or in batches.
- C. The SMC can provision personal VMRs to conference users only one by one.
- D. The SMC can provision personal VMRs to conference rooms only one by one.

정답: A,B

설명:

The SMC's service provisioning functions include both single-item and batch modes for personal VMR assignment, whether you're binding VMRs to conference rooms or to individual users, you can provision them one by one or import a list and provision them in bulk.

질문 # 31

Which of the following statements are true about the SC cluster reconstruction deployment scenario? (Choose all that apply.)

- A. If the number of SIP endpoints is much greater than that of H.323 endpoints, an SC cluster can be deployed for SIP endpoint access. The non-cluster registration SC is reserved for H.323 endpoint access.
- B. If the number of SIP endpoints is much greater than that of H.323 endpoints, an SC cluster can be deployed for SIP and H.323 endpoint access.
- C. If the number of SIP endpoints is far less than that of H.323 endpoints, you are advised not to deploy the SC cluster.
- D. If the number of connected extranet soft clients is greater than 2000, you are advised to reconstruct a non-cluster proxy SC into a proxy SC cluster.

정답: A,C,D

설명:

When SIP endpoints greatly outnumber H.323 endpoints, you deploy an SC cluster to serve the SIP devices while leaving a standalone SC for the H.323 endpoints.

If SIP registrations are much fewer than H.323 registrations, clustering the SC for SIP isn't recommended, as the scale doesn't justify the added complexity.

A proxy SC supports up to 2,000 external soft-client registrations; if you exceed this, you should rebuild it as a proxy-SC cluster to handle the extra load.
