## Fortinet FCP - FortiAnalyzer 7.6 Analyst Sample Questions (Q46-Q51):

NEW QUESTION # 46  
Exhibit.

Event #	Event Status	Event Type	Severity
<input type="checkbox"/> bujyqttatbsd.findhere.org (1)	Mitigated	Web Filter	Low
<input type="checkbox"/> Web request to suspicious destination from 10.0.3.20 blocked	Mitigated	Web Filter	Low

Which statement about the event displayed is correct?

- A. An incident was created from this event.
- B. The security risk was blocked or dropped.
- C. The risk source is isolated.
- D. The security event risk is considered open.

**Answer: D**

Explanation:

Exact Extract: Study Guide p.82: "Unhandled " indicates the security event risk is considered open.

Technical Deep Dive: The displayed event is best interpreted as open/unhandled, so the correct answer is C.

In FortiAnalyzer, event status is not just a label; it tells the analyst whether the risk still requires action. A risk source being isolated would map to Contained, while traffic being blocked or dropped maps to Mitigated. An incident being created from an event is a separate workflow action and cannot be concluded from the event status alone unless the exhibit explicitly shows the incident linkage.

#### NEW QUESTION # 47

You discover that a few reports are taking a long time to generate.

Which two steps can you take to troubleshoot? (Choose two.)

- A. Increase the ADOM reports quota
- B. Remove old reports from the hcache
- C. Enable auto-cache and run the reports again
- D. Review report diagnostics

**Answer: C,D**

Explanation:

Reviewing report diagnostics helps identify performance bottlenecks and errors during report generation.

Enabling auto-cache improves report generation speed by caching report data for faster retrieval on subsequent runs.
