Many people may have different ways and focus of study to pass Identity-and-Access-Management-Architect exam in the different time intervals, but we will find that in real life, can take quite a long time to learn Identity-and-Access-Management-Architect learning questions to be extremely difficult. You may be taken up with all kind of affairs, and sometimes you have to put down something and deal with the other matters for the latter is more urgent and need to be done immediately. With the help of our Identity-and-Access-Management-Architect training guide, your dream won't be delayed anymore.

Salesforce Identity-and-Access-Management-Architect Exam Syllabus

Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Accepting Third-Party Identity in Salesforce: It discusses cases where Salesforce acts as a Service Provider (SP), methods for provisioning users from identity stores (B2E, B2C), appropriate authentication mechanisms for accepting third-party identities, and ways to provision users to enable SSO while applying access rights. Moreover, the topic also addresses auditing, monitoring approaches, and tools to diagnose IdP issues.
Topic 2	<ul style="list-style-type: none">Community (Partner and Customer): Here, you'll find details on customizing user experiences in Experience Cloud, supporting external IdPs in communities, understanding External Identity solutions and associated licenses, and when to use embedded login based on different scenarios.
Topic 3	<ul style="list-style-type: none">Salesforce as an Identity Provider: In this topic, you'll find information on OAuth flows, configuring Connected Apps for authorization, and implementation concepts of OAuth. It also recommends Salesforce technologies to provide identity to third-party systems.

Topic 4	<ul style="list-style-type: none"> • Identity Management Concepts: This topic covers common authentication patterns, building blocks of identity solutions (authentication, authorization, accountability), and establishing trust between systems. It also includes methods for provisioning users in Salesforce and troubleshooting common points of failure in SSO solutions.

Tips to Crack Salesforce Identity-and-Access-Management-Architect Exam Easily

Since the childhood, we seem to have been studying and learning seems to take part in different kinds of the purpose of the test, at the same time, we always habitually use a person's score to evaluate his ability. And our Identity-and-Access-Management-Architect study materials can help you get better and better reviews. This is a very intuitive standard, but sometimes it is not enough comprehensive, therefore, we need to know the importance of getting the test Identity-and-Access-Management-Architect Certification, qualification certificate for our future job and development is an important role.

Salesforce Certified Identity and Access Management Architect Sample Questions (Q98-Q103):

NEW QUESTION # 98

Universal Containers (UC) is looking to purchase a third-party application as an Identity Provider. UC is looking to develop a business case for the purchase in general and has enlisted an Architect for advice. Which two capabilities of an Identity Provider should the Architect detail to help strengthen the business case?

Choose 2 answers

- **A. The Identity Provider can centralize enterprise password policy.**
- B. The Identity Provider can authenticate multiple social media accounts.
- C. The Identity Provider can store credentials for multiple applications.
- **D. The Identity Provider can authenticate multiple applications.**

Answer: A,D

Explanation:

The two capabilities of an identity provider that the architect should detail to help strengthen the business case are that the identity provider can authenticate multiple applications and that the identity provider can centralize enterprise password policy. These capabilities can provide benefits such as reducing login friction, improving user experience, enhancing security, and simplifying administration. Option B is not a good choice because the identity provider can authenticate multiple social media accounts may not be relevant for UC's business case, as it does not specify how UC will use social media for its identity management. Option C is not a good choice because the identity provider can store credentials for multiple applications may not be desirable or secure for UC's business case, as it may imply that the identity provider is using password vaulting or federation rather than single sign-on (SSO) or identity federation. References: Identity Management Concepts, [Single Sign-On Implementation Guide]

NEW QUESTION # 99

A global company has built an external application that uses data from its Salesforce org via an OAuth 2.0 authorization flow. Upon logout, the existing Salesforce OAuth token must be invalidated.

Which action will accomplish this?

- A. Enable Single Logout with a secure logout URL.
- **B. Use a HTTP POST to make a call to the revoke token endpoint.**
- C. Use a HTTP POST to request the refresh token for the current user.

- D. Use a HTTP POST to the System for Cross-domain Identity Management (SCIM) endpoint, including the current OAuth token.

Answer: B

Explanation:

Explanation

To invalidate an existing Salesforce OAuth token, the external application needs to make a HTTP POST request to the revoke token endpoint, passing the token as a parameter. This will revoke the access token and the refresh token if available. The other options are not relevant for this scenario. References: Revoke OAuth Tokens, OAuth 2.0 Token Revocation

NEW QUESTION # 100

Universal Containers (UC) has implemented SAML-based SSO solution for use with their multi-org Salesforce implementation, utilizing one of the the orgs as the Identity Provider. One user is reporting that they can log in to the Identity Provider org but get a generic SAML error message when accessing the other orgs. Which two considerations should the architect review to troubleshoot the issue? Choose 2 answers

- A. The Federation ID must is case sensitive
- B. The Federation ID must be in the form of an email address.
- C. The Federation ID must be a valid Salesforce Username
- D. The Federation ID must be populated on the user record.

Answer: A,D

Explanation:

Explanation

The Federation ID is a field on the user object that is used to link a Salesforce user with an external identity provider. When using SAML SSO, Salesforce matches the Federation ID value with the NameID element in the SAML assertion to identify the user. To troubleshoot the issue of getting a generic SAML error message when accessing the other orgs, the architect should review the following considerations:

The Federation ID must be case sensitive, which means that the value in the user record must match exactly with the value in the SAML assertion. For example, if the Federation ID is "John.Doe", then "john.doe" or "JOHN.DOE" will not work.

The Federation ID must be populated on the user record, which means that the user must have a value for this field in each org that they want to access via SSO. If the Federation ID is blank or missing, then Salesforce will not be able to match the user with the SAML assertion.

NEW QUESTION # 101

Universal Containers (UC) is planning to add Wi-Fi enabled GPS tracking devices to its shipping containers so that the GPS coordinates data can be sent from the tracking device to its Salesforce production org via a custom API. The GPS devices have no direct user input or output capabilities.

Which OAuth flow should the identity architect recommend to meet the requirement?

- A. OAuth 2.0 Username-Password Flow for Special Scenarios
- B. OAuth 2.0 Asset Token Flow for Securing Connected Devices
- C. OAuth 2.0 JWT Bearer Flow for Server-to-Server Integration
- D. OAuth 2.0 Web Server Flow for Web App Integration

Answer: B

Explanation:

The OAuth 2.0 Asset Token Flow is Salesforce's purpose-built answer for connected devices and IoT-style integrations. It is designed for assets that need to act on behalf of a physical device or asset record rather than a human user. That makes it the correct fit for sensors, GPS trackers, or smart devices that must securely post telemetry or create service actions in Salesforce. User-agent, web-server, or username-password flows are built around user identity or generic application access, not around a registered device/asset relationship. The architectural advantage of the asset token model is that it ties the authorization context back to the asset, which is exactly what you want when the platform must know which device generated the event or maintenance alert. This is why option A is the best answer in Salesforce terms.

NEW QUESTION # 102

Northern Trail Outfitters would like to automatically create new employee users in Salesforce with an appropriate profile that maps to its Active Directory Department.

How should an identity architect implement this requirement?

- A. Use the updateUser method in the Just-in-Time (JIT) provisioning registration handler to assign the appropriate profile.
- B. Use the createUser method in the Just-in-Time (JIT) provisioning registration handler to assign the appropriate profile.
- C. Use a login flow to collect Security Assertion Markup Language attributes and assign the appropriate profile during Just-In-Time (JIT) provisioning.
- D. Make a callout during the login flow to query department from Active Directory to assign the appropriate profile.

Answer: A

NEW QUESTION # 103

.....

Are you ready to gain all these Salesforce Identity-and-Access-Management-Architect certification benefits? Looking for a simple, smart, and quick way to pass the challenging Salesforce Certified Identity and Access Management Architect exam? If your answer is yes then you need to enroll in the Identity-and-Access-Management-Architect exam and prepare well to crack this Identity-and-Access-Management-Architect Exam with good scores. In this career advancement journey, you can get help from VCE4Dumps. The VCE4Dumps will provide you with real, updated, and error-free Identity-and-Access-Management-Architect Exam Dumps that will enable you to pass the final Salesforce Certified Identity and Access Management Architect exam easily.
