Reliable Infoblox NIOS-DDI-Expert Test Preparation | Valid Test NIOS-DDI-Expert Format

BONUS!!! Download part of DumpsQuestion NIOS-DDI-Expert dumps for free: https://drive.google.com/open?id=1OF4TFKfhyxUWPXnxO2So_BF-siB2zU2L

Our NIOS-DDI-Expert research materials are widely known throughout the education market. Almost all the candidates who are ready for the qualifying examination know our products. Even when they find that their classmates or colleagues are preparing a NIOS-DDI-Expert exam, they will introduce our study materials to you. So, our learning materials help users to be assured of the NIOS-DDI-Expert Exam. Currently, my company has introduced a variety of learning materials, covering almost all the official certification of qualification exams, and each NIOS-DDI-Expert learning materials in our online store before the listing, are subject to stringent quality checks within the company.

Eliminates confusion while taking the Infoblox NIOS-DDI-Expert certification exam. Prepares you for the format of your Infoblox NIOS-DDI-Expert exam dumps, including multiple-choice questions and fill-in-the-blank answers. Comprehensive, up-to-date coverage of the entire Infoblox NIOS-DDI-Expert Certification curriculum.

Valid Test NIOS-DDI-Expert Format | Latest NIOS-DDI-Expert Practice Materials

Revealing whether or not a man succeeded often reflect in the certificate he obtains, so it is in IT industry. Therefore there are many people wanting to take Infoblox NIOS-DDI-Expert exam to prove their ability. However, want to pass Infoblox NIOS-DDI-Expert Exam is not that simple. But as long as you get the right shortcut, it is easy to pass your exam. We have to commend DumpsQuestion exam dumps that can avoid detours and save time to help you sail through the exam with no mistakes.

Infoblox Qualified NIOS DDI Expert - INE Sample Questions (Q54-Q59):

NEW QUESTION # 54
What does the CLI command "reset all" do?

- A. This is not a valid CLI command
- B. It erases the database, network settings, and log files on the appliance
- C. It erases the database, licenses, and network settings on the appliance
- D. It erases the appliance back to factory default

Answer: A

Explanation:
Comprehensive and Detailed In-Depth Explanation:The NIOS CLI offers specific "reset" commands for appliance management, but "reset all" isn't one of them. Let's explore:
* Valid Commands:
* reset database: Clears the NIOS database (DNS, DHCP data) but keeps network settings and licenses.
* reset all licenses: Resets licensing, requiring re-registration.
* set factory: Performs a full factory reset, wiping everything (database, network, logs) to defaults.
* "reset all":This isn't documented or recognized in NIOS CLI. Typing it yields an error (e.g., "Invalid command").

* Options Analysis:
* A:Factory reset is set factory, not "reset all." Incorrect.
* B/C:No single "reset all" command combines these actions-specific resets are separate.
Incorrect.
* D:Matches the lack of this command in NIOS. Correct.
* Practical Example:In an INE lab, you'd use reset database to clear a test Grid member, but "reset all" would fail, teaching CLI precision in troubleshooting.References:Infoblox NIOS CLI Reference Guide; INE Course Content: NIOS DDI Grid Troubleshooting.

NEW QUESTION # 55

What is the purpose of the "Override" button in the context of settings inheritance?

- A. To reset all settings to their default values
- B. To change the settings at a lower level, overriding the inherited values
- C. To apply the same settings across all hierarchy levels simultaneously
- D. To prevent any changes to settings at lower hierarchy levels

Answer: B

Explanation:
Comprehensive and Detailed In-Depth Explanation:Settings inheritance in NIOS allows higher-level configurations (e.g., Grid-wide) to propagate to lower levels (e.g., members):
* Override Button:Found in Grid Manager (e.g., Grid > Members > Edit), it lets admins modify a setting at a lower level (e.g., member-specific DHCP options), breaking inheritance from the parent (e.
g., Grid).
* Why C:Overriding replaces the inherited value with a custom one for that object, tailoring behavior without affecting others.
* Options:
* A:Resetting to defaults is a separate action (e.g., "Revert to Default"). Incorrect.
* B:Preventing changes contradicts override's purpose-it enables change. Incorrect.
* C:Matches the function-alter lower-level settings. Correct.
* D:Applying uniformly isn't overriding-it's setting at a higher level. Incorrect.
* Practical Example:In an INE lab, you'd override a Grid-wide DNS TTL (3600s) to 300s on one member, test resolution, and troubleshoot inheritance conflicts.References:Infoblox NIOS Administrator Guide - Inheritance; INE Course Objective: NIOS DDI Grid Deployment.

NEW QUESTION # 56

Which of the following statements are true about NIOS CSV import? (Select all that apply.)

- A. The CSV format is NIOS version-specific
- B. Not all fields of the CSV file are required. The mandatory fields are denoted by the * symbol
- C. You must use NIOS WAPI to leverage CSV import
- D. You must use the Data Import Wizard (DIW) to leverage CSV import

Answer: B,D

Explanation:
Comprehensive and Detailed In-Depth Explanation:CSV import in NIOS allows bulk management of objects (e.g., DNS records, networks) via structured files. Let's evaluate each statement:
* A:The Data Import Wizard (DIW) in Grid Manager (Data Management > Import) is the primary GUI tool for CSV imports, guiding admins through file upload, format selection, and validation. While WAPI can also handle CSV, DIW is the standard method, making this true in the GUI context emphasized in INE. Correct.
* B:The CSV format adheres to a standard Infoblox structure (e.g., headers like "fqdn,ip_address"), but it' s not strictly version-specific-core fields remain consistent across NIOS versions, though new features might add optional fields. Incorrect.
* C:In a CSV file, mandatory fields (e.g., "fqdn" for a host record) are marked with an asterisk (*) in the CSV template or documentation, while others (e.g., "comment") are optional. This flexibility is key for bulk operations. Correct.
* D:WAPI supports CSV import via API calls, but it's not required-DIW provides a GUI alternative.
This makes the "must" phrasing false. Incorrect.
* Practical Example:In an INE lab, you might use DIW to import a CSV with A records, ensuring only mandatory fields (marked *) are filled, troubleshooting any import errors via logs.References:Infoblox NIOS Administrator Guide - CSV Import; INE Course

Objective: NIOS DDI Grid Deployment.

NEW QUESTION # 57

How does the passive member of a High Availability (HA) pair receive its database updates?

- A. bloxSync from the Active node
- B. SSL VPN from the Grid Master
- C. bloxSync from the Grid Master
- D. SSL VPN from the Active node

Answer: A

Explanation:
Comprehensive and Detailed In-Depth Explanation:In an HA pair, the passive node stays synchronized with the active node to ensure seamless failover. This synchronization usesbloxSync, a proprietary Infoblox protocol that securely transfers database updates (e.g., DNS records, DHCP leases) between the HA pair members over an SSL-encrypted connection. Theactive node, being the operational member, directly provides these updates to the passive node. The Grid Master handles Grid-wide sync, but within an HA pair, the active node is the source. Options A and B misrepresent the mechanism (it's not a traditional VPN), and Option D incorrectly attributes the sync to the Grid Master. This is a critical HA troubleshooting topic in the INE course. References:Infoblox NIOS Documentation - HA Pair Configuration; INE Course Content: NIOS DDI Grid Troubleshooting.

NEW QUESTION # 58

A customer has the following Grid: Grid Master HA pair, three HA Grid Members, one single Grid Member.
The customer has defined custom Upgrade Groups based on the physical location of the appliances. After the administrator clicks Upgrade, which node will go through the upgrade process first?

- A. Grid Master active node
- B. All of the Member passive nodes
- C. Depends on the configuration of Upgrade Groups
- D. Grid Master passive node

Answer: C

Explanation:
Comprehensive and Detailed In-Depth Explanation:In NIOS, the upgrade process for a Grid can be customized usingUpgrade Groups, which allow administrators to define the order and timing of upgrades for Grid members based on criteria like location or role. By default, the Grid Master (active node) upgrades last to ensure continuity, and passive nodes in HA pairs often upgrade before active nodes. However, when customUpgrade Groups are defined (as in this scenario, based on physical location), the upgrade sequence follows the administrator's configuration rather than a fixed rule. Thus, the first node to upgrade depends entirely on how the Upgrade Groups are prioritized in the upgrade schedule. This flexibility is a focus of the INE course's Grid deployment section.References:Infoblox NIOS Administrator Guide - Software Upgrades; INE Course Objective: NIOS DDI Grid Deployment.

NEW QUESTION # 59
