

Successfully Get the Quality Nutanix NCP-DB Exam Questions

DOWNLOAD the newest Actual4Exams NCP-DB PDF dumps from Cloud Storage for free: https://drive.google.com/open?id=1DIfA1Ln5F4Q5XzneAX_9fiVBDxu47c9x

Actual4Exams are stable and reliable exam questions provider for person who need them for their exam. We have been staying and growing in the market for a long time, and we will be here all the time, because the excellent quality and high pass rate of our NCP-DB Exam Questions. As for the safe environment and effective product, there are thousands of candidates are willing to choose our NCP-DB study question, why don't you have a try for our study question, never let you down!

You do not worry about that you get false information of NCP-DB guide materials. According to personal preference and budget choice, choosing the right goods to join the shopping cart. The 3 formats of NCP-DB study materials are PDF, Software/PC, and APP/Online. Each format has distinct strength and shortcomings. We have printable PDF format prepared by experts that you can study our NCP-DB training engine anywhere and anytime as long as you have access to download. We also have installable software application which is equipped with NCP-DB simulated real exam environment.

NCP-DB Exam Tests, Test NCP-DB Dumps

This is your right to have money-back guarantee, namely once but a full refund with the transcript. Some people worry about the complex refund of our NCP-DB exam practice, as a matter of fact, our refunding procedures are very simple. We will immediately refund if the buyer provide failure test proof just like failure score scan or screenshots. If you have any questions about our NCP-DB Preparation quiz, please contact us by online service or email, we will reply as soon as possible.

Nutanix Certified Professional - Database Automation (NCP-DB) v6.5 Sample Questions (Q143-Q148):

NEW QUESTION # 143

A request is received to refresh a database clone from a new manual snapshot. When the administrator attempts to create the new snapshot from the Time Machine, it is in a Frozen state.

What causes a Time Machine to enter the Frozen state and what are the administrator's options to complete the request?

- A. Cause: The Time Machine enters a Frozen state when the database is de-registered without removing the Time Machine. Resolution: The Time Machine must be paused, then the database re-registered with a new Time Machine and a new clone created.
- B. Cause: The Time Machine enters a Frozen state when the database is de-registered without removing the Time Machine. Resolution: To complete the request the database must be re-registered in NDB, create a new Time Machine and create a new clone.
- C. Cause: The Time Machine enters a Frozen state when the database is de-registered without removing the Time Machine. Resolution: To complete the request the database must be re-registered in NDB, this thaws the Time Machine and it resumes

operation so the clone can be refreshed.

- D. Cause: The Time Machine enters a Frozen state after too many snapshot or log catchup failures. Resolution: Remediate the snapshot or log catchup failures, this thaws the Time Machine, allowing normal operations to continue and the request can be completed.

Answer: C

Explanation:

A Time Machine is a core construct of the copy data management service in NDB that captures and manages the data of a database to deliver a recovery point objective (RPO) SLA. A Time Machine can enter a Frozen state for various reasons, such as database de-registration, snapshot or log catchup failures, or manual intervention. When a Time Machine is in a Frozen state, it stops taking new snapshots and log backups, and cannot perform any clone, refresh, or restore operations. To resume the normal operation of a Time Machine, it must be thawed by resolving the root cause of the freeze. One of the common causes of a Time Machine freeze is when the database is de-registered from NDB without removing the Time Machine. This can happen when the administrator wants to move the database to a different NDB instance or cluster, or when the database is accidentally de-registered. In this case, the Time Machine becomes orphaned and frozen, and cannot be used for any operations. To complete the request to refresh a database clone from a new manual snapshot, the administrator must first re-register the database in NDB using the same database name and ID as before. This will automatically thaw the Time Machine and resume its operation. The administrator can then create a new manual snapshot from the Time Machine and use it to refresh the database clone. The other options are not correct, as they either require unnecessary steps or do not address the root cause of the freeze. References:

NEW QUESTION # 144

An administrator needs to migrate a large I/O-intensive database that doesn't support multi-disk layout. How should the storage be provisioned with Era to support the database while optimizing performance?

- A. Volume Group with Load Balancing
- **B. Volume Group**
- C. Storage Spaces
- D. vDisk based provisioning

Answer: B

Explanation:

In Nutanix Era, a Volume Group is the recommended storage provisioning method for a large I/O-intensive database that doesn't support a multi-disk layout. A Volume Group in Nutanix Era is a collection of disks that can be managed as a single entity, providing a way to aggregate the storage capacity of multiple disks into a larger storage unit. This allows for better performance optimization as it enables the database to leverage the combined I/O capabilities of all the disks in the group. It's important to note that while other options like Load Balancing, Storage Spaces, and vDisk based provisioning can also be used in certain scenarios, a Volume Group is specifically designed for situations where a single, high-performance storage unit is required.

NEW QUESTION # 145

What is the most efficient way to get information on REST APIs for a task in Era?

- A. Log into Era VM and run to list all the REST APIs.
- **B. use API equivalent button in a workflow.**
- C. Navigate to and look for the desired
- D. Navigate to Swagger REST in Era GI-II.

Answer: B

Explanation:

This is because it allows the database to be refreshed at the exact time specified (9:30 PM) with the most recent data. The other options either perform the snapshot before the desired time or do not specify when the snapshot would occur. Please note that the

exact answer might depend on the specific database system and its capabilities. Always refer to the database's documentation for the most accurate information.

NEW QUESTION # 146

A quality assurance team noticed a significant change between a cloned database they are currently using versus the one used one week ago. They created an SQL script to verify the differences.

Which task should be performed by an NDB administrator to provide the correct database to the QA team?

- A. Perform a Log Catch Up operation.
- **B. Clone database selecting Point in Time data.**
- C. Replicate a selected snapshot.
- D. Create a clone database from a snapshot.

Answer: B

Explanation:

When a quality assurance (QA) team notices a significant change between a cloned database currently in use and one used a week ago, and they have an SQL script to verify differences, the NDB administrator needs to provide a clone reflecting the database state from a week ago. The task "Clone database selecting Point in Time data" allows the administrator to select a specific point-in-time snapshot (e.g., from a week ago) using the Time Machine feature. This creates a new clone with the exact data state at that time, enabling the QA team to compare it with the current clone.

* Option A (Replicate a selected snapshot) is incorrect because replication is for HA, not creating a usable clone for QA.

* Option B (Create a clone database from a snapshot) is incorrect because it does not specify point-in-time selection, limiting flexibility to the latest snapshot.

* Option C (Clone database selecting Point in Time data) is correct as it allows precise selection of the week-old data state.

* Option D (Perform a Log Catch Up operation) is incorrect because Log Catch Up applies recent logs, not reverting to a past state.

This approach meets the QA team's need for historical data comparison.

NEW QUESTION # 147

How does NDB send notifications when alerts are generated?

- A. SNMP
- B. Pulse
- **C. Email**
- D. APIs

Answer: C

Explanation:

NDB sends notifications when alerts are generated via email. The email notifications can be configured to send to one or more recipients, and can be customized to include the alert severity, category, description, and resolution steps. The email notifications help to inform the database administrator and other stakeholders about the status and issues of the NDB-managed databases and operations.

NDB does not send notifications via SNMP, APIs, or Pulse. SNMP is a protocol for collecting and organizing information about managed devices on a network. APIs are interfaces for communicating and exchanging data between different applications or systems. Pulse is a feature of the Nutanix cluster that collects and sends diagnostic and usage data to Nutanix for analysis and support.

NEW QUESTION # 148

.....

Learning is just a part of our life. We do not hope that you spend all your time on learning the NCP-DB certification materials. Life needs balance, and productivity gives us a sense of accomplishment and value. So our NCP-DB real exam dumps have simplified your study and alleviated your pressure from study. It is our goal that you study for a short time but can study efficiently. At present, thousands of candidates have successfully passed the NCP-DB Exam with less time input. In fact, there is no point in wasting much time on invalid input. As old saying goes, all work and no play makes jack a dull boy. Our NCP-DB certification materials really deserve your choice. Contact us quickly. We are waiting for you.

NCP-DB Exam Tests: <https://www.actual4exams.com/NCP-DB-valid-dump.html>

Since the content of the examination is also updating daily, you will need real and latest Nutanix NCP-DB Exam Dumps to prepare successfully for the NCP-DB certification exam in a short time, NCP-DB exam braindumps cover most of knowledge points for the exam, and you can increase your professional ability in the process of learning. Nutanix Dumps NCP-DB Download However, one thing must be fully realized is that it is not always easy to get a certificate.

Why Dividend Investing, This provides the level NCP-DB of functionality listed earlier, Since the content of the examination is also updating daily, you will need real and latest Nutanix NCP-DB Exam Dumps to prepare successfully for the NCP-DB certification exam in a short time.

New Dumps NCP-DB Download | High Pass-Rate NCP-DB Exam Tests: Nutanix Certified Professional - Database Automation (NCP-DB) v6.5 100% Pass

NCP-DB exam braindumps cover most of knowledge points for the exam, and you can increase your professional ability in the process of learning. However, one thing must be fully realized is that it is not always easy to get a certificate.

Now, our NCP-DB learning prep can meet your demands, In order to enhance your skills in the world, one has to be efficient enough to keep his/her skills updated.
