AP-219 Zertifikatsdemo - AP-219 Deutsch

Es ist besser, zu handeln als die anderen zu beneiden. Die Prüfungsmaterialien zur Salesforce AP-219 Zertifizierungsprüfung von ZertFragen wird Ihr erster Schritt zum Erfolg. Mit ZertFragen können Sie sicher die schwierige Salesforce AP-219 Prüfung bestehen. Mit diesem Salesforce AP-219 Zertifikat können Sie ein Licht in Ihrem Herzen anzünden und neue Wege einschlagen und ein erfolgreiches Leben führen.

Salesforce AP-219 Prüfungsplan:

Thema	Einzelheiten
Thema 1	• Data Model: Core objects (Order, Order Summary, Fulfillment Orders, Return Orders), B2C Commerce integrations, and tracing data flow including custom attributes.
Thema 2	• Order Management Basics: Foundation of Order Management within Salesforce ecosystem, platform architecture, integration capabilities with third-party systems, and native Salesforce functionality.
Thema 3	• User Experience and Customization: Customizing Lightning UI for different user roles using declarative tools like Lightning Page Editor and Report Builder.
Thema 4	• Advanced Topics: Troubleshooting configuration issues, diagnosing system integration problems, and resolving deployment obstacles.
Thema 5	• Process Automation and Integrations: Configuring end-to-end Order Management processes and external system integrations using declarative tools and clicks-based configuration.

Salesforce Order Management Administrator Accredited Professional AP-219 Prüfungsfragen mit Lösungen (Q93-Q98):

93. Frage

A company sells its products in kits. The company wants the kits to remain grouped together during returns in Order Management so that all parts of the kit are accounted for. What should the administrator recommend?

- A. Pass the data as is. Order Management will handle the kit.

- B. Track the individual kit items using custom attributes
- C. Add a custom attribute to the order header only
- D. Add a suffix to the Stock Keeping Unit of the Product which represents Kit status

Antwort: B

Begründung:

The best way for the administrator to recommend tracking the kits so that they remain grouped together during returns in Order Management is to use custom attributes. Custom attributes are fields that can be added to objects to store additional information that is not available in standard fields. The administrator can create custom attributes for the Order Item Summary object to indicate whether an item is part of a kit, and what are the other items in the kit. This way, the kits can be easily identified and handled during returns. 94. Frage

At minimum, a custom attribute must be created on which objects for the values to autopopulate in Order Management from B2C Commerce Cloud at the Order item level?

- A. Order, Order Summary, Change Order and Fulfillment Order
- B. Order and Order Summary
- C. Order Item and Order Item Summary
- D. Order, Order Summary, Order Item and Order Item Summary

Antwort: C

95. Frage

Some admins are exploring the optimal Data Model for their QMS Org. What should be considered when choosing between Person Accounts vs Contacts?

- A. Person Accounts are appropriate for B2B transactions while Account-Contact model is appropriate for B2C transactions
- B. Person Accounts are appropriate for B2C transactions while Account-Contact model is appropriate for B2B transactions
- C. Person Accounts once enabled cannot be rolled back and makes changes to the data model
- D. Person Accounts once enabled can be rolled back

Antwort: B

Begründung:

The correct statement about Person Accounts and Contacts is that Person Accounts are appropriate for B2C transactions while Account-Contact model is appropriate for B2B transactions. A Person Account is a type of account that represents an individual consumer, rather than a business or organization. A Person Account combines the features and fields of both the Account and Contact objects, and it does not require a Contact record to be associated with it. A Person Account is suitable for B2C transactions, where the customers are individual consumers who purchase products or services for personal use. An Account-Contact model is a type of data model that represents a business or organization as an account, and its employees or affiliates as contacts. An account can have many contacts associated with it, but a contact can only belong to one account. An Account-Contact model is suitable for B2B transactions, where the customers are businesses or organizations that purchase products or services for professional use. 96. Frage

An administrator is attempting to deploy a Change Set from a development org to a test org but the test org is not available in the list of target organizations. What are two reasons that could cause this issue?

- A. The components in the Change set could not be found within the test org
- B. ChangeSets can only be deployed from a sandbox org to a production org, not another sandbox org
- C. The development org has not been approved to upload Change Sets from within the test org
- D. The development org and test org are not associated with the same production org

Antwort: C,D

Begründung:

Two reasons that could cause the issue of not being able to deploy a Change Set from a development org to a test org are:

The development org has not been approved to upload Change Sets from within the test org. To deploy ChangeSets between two sandbox orgs, the administrator needs to establish a deployment connection between them. A deployment connection allows one org to send outbound Change Sets and another org to receive inbound Change Sets. The administrator can create a deployment connection request from the development org and approve it from the test org.

The development org and test org are not associated with the same production org. To deploy Change Sets between two sandbox orgs, they must be linked to the same production org. A production org is an org that contains live data and business processes. A sandbox org is a copy of a production org that is used for development, testing, or training purposes. Sandbox orgs inherit the deployment connections of their source production orgs. Reference: Deploy Using Change Sets, Deploy a Change Set

97. Frage

An administrator has created a new currency field on the Fulfillment Order object and wants to roll up the total to the Order Summary object. When creating a rollup field on the Order Summary object, Fulfillment Order does not appear as an option. Why is this?

- A. The Order Summary object has reached the limit of Rollup Summary fields
- B. The Order Summary field on the Fulfillment Order object is a Lookup
- C. The Rollup Summary field must be created on the Fulfillment Order object with the Order Summary object as the parent
- D. Rollup Fields cannot sum Currency Fields

Antwort: B

Begründung:

The reason why Fulfillment Order does not appear as an option when creating a rollup field on the Order Summary object is that the Order Summary field on the Fulfillment Order object is a Lookup. A Lookup field is a type of custom field that creates a relationship between two objects, but does not support rollup summary fields. To create a rollup summary field, the relationship between the objects must be master-detail, which means that the child record cannot exist without its parent record. Verified Reference: https://help.salesforce.com/s/articleView?id=sf.custom_field_types.htm&type=5https://help.salesforce.com/s/articleView?id=sf.fields_about_roll_up_summary_fields.htm&type=5
