Tech Challenge

डॉ. बाबा साहब अम्बेडकर पॉलीटेक्निक महाविद्यालय योजना के लिए अभिभावक की वार्षिक आय सीमा कितनी होनी चाहिए?

A. ₹2 लाख
B. ₹1.80 लाख
C. ₹1 लाख
D. ₹2.5 लाख

सही उत्तर: B — ₹1.80 लाख

डॉ. बाबा साहब अम्बेडकर पॉलीटेक्निक महाविद्यालय योजना के लिए अभिभावक की वार्षिक आय सीमा ₹1.80 लाख निर्धारित है।

इस योजना के माध्यम से पात्र SC विद्यार्थियों को निःशुल्क पॉलीटेक्निक शिक्षा के लिए शैक्षणिक सहयोग उपलब्ध कराया जाता है।

Pass4sures cares for your queries also, there is a competition going on in market who is offering DSPM-Deploy-and-Administer Study Material, but to remove all the ambiguities, Pass4sures offers you to try a free demo of actual DSPM-Deploy-and-Administer exam questions. The free demo will give you a clear image of what exactly Pass4sures offers you. You may buy the product if you are satisfied with the demo. Pass4sures also offers you a best feature of free updates. We update the product on a consistent basis. We own a dedicated team of experts in standby, who make the necessary changes in the material, as and when required.

Forcepoint DSPM-Deploy-and-Administer Exam Syllabus Topics:

Section	Weight	Objectives
Topic 1: Monitoring, Analytics, and Reporting	10%	- Alert configuration and monitoring - Compliance reporting and audit logs - Analytics and data visualization - Dashboard creation and customization
Topic 2: Data Discovery and Classification	25%	- Scanner and detector configuration - Compliance framework alignment - Data register and sensitive data mapping - Pattern matching and classification rules

Topic 3: Troubleshooting and Maintenance	10%	- System health monitoring - Upgrade and patch management - Log analysis and error resolution - Backup and recovery procedures
Topic 4: Administration and Configuration	20%	- Controls orchestration - User and role management - Policy creation and enforcement - System settings and maintenance
Topic 5: Access Governance and Risk Management	15%	- Access review and entitlement analysis - Data access governance policies - Risk scoring and prioritization - Incident handling and remediation
Topic 6: DSPM Architecture and Deployment	20%	- Installation and configuration - Architecture overview and components - Integration with cloud and on-prem environments - Deployment planning and requirements

DSPM-Deploy-and-Administer Top Exam Dumps, Latest DSPM-Deploy-and-Administer Study Plan

Pass4sures Forcepoint DSPM-Deploy-and-Administer Practice Test dumps are doubtless the best reference materials compared with other DSPM-Deploy-and-Administer exam related materials. If you still don't believe it, come on and experience it and then you will know what I was telling you was true. You can visit Pass4sures.com to download our free demo. There are two versions of Pass4sures dumps. The one is PDF version and another is SOFT version. You can experience it in advance. In this, you can check its quality for yourself.

Forcepoint Certified Forcepoint DSPM - Professional: Deploy and Administer Exam Sample Questions (Q32-Q37):

NEW QUESTION # 32

Which of the following describes a use case for Forcepoint DSPM pattern matching?

- A. Identifying and encrypting personally identifiable information on Google Drive.
- B. Identifying and redacting personally identifiable information on OneDrive.
- C. Identifying personally identifiable information in Outlook and Gmail emails.
- **D. Identifying personally identifiable information on SharePoint.**

Answer: D

Explanation:

Forcepoint DSPM pattern matching is used to identify defined pieces of information inside scanned content by applying regular expressions. The documented function is discovery and classification: pattern matching identifies particular information in a document by using RegEx that attempts to match file content. This makes identifying personally identifiable information on SharePoint the correct use case. SharePoint is a supported Microsoft data source for scanning, and Forcepoint specifically documents SharePoint Online as a connector used to scan SharePoint accounts and apply classification tags to files containing sensitive data stored in SharePoint.

The key distinction is that pattern matching does not perform remediation actions such as redaction or encryption. Options B and D therefore overstate the capability: Forcepoint DSPM may discover and classify sensitive data that later informs controls, but the pattern itself is not a redaction or encryption engine. Option A is less precise in this context because the question is testing the canonical pattern-matching use case against scanned documents and repositories, while the strongest documented repository example among the choices is SharePoint. Pattern configuration can also assign classification, compliance, and distribution tags when a RegEx is detected, such as GDPR/PII tagging for identifiers. References/topics: Pattern Matching, RegEx, Compliance Tags, SharePoint Scanning, Sensitive Data Classification .

NEW QUESTION # 33

Which of the following are key features of Controls Orchestration in Forcepoint DSPM? Select four.

- A. Rule-Based Automation
- B. Workflow Configuration Tool
- C. Rule-Based Remediation
- D. Webhook Notification System
- E. Incident Management

Answer: A,B,D,E

Explanation:

The correct selections are Rule-Based Automation, Incident Management, Webhook Notification System, and Workflow Configuration Tool. Forcepoint DSPM Controls Orchestration is built around rules that identify data requiring attention and can trigger notifications or automated responses. The official documentation describes Controls Orchestration as providing "automated work flows, rule-based detection, timely notifications, and efficient incident management," which directly maps to these four options. Rule-Based Automation is represented by custom rules that evaluate datasets such as files, trustees, or agent activities using GQL conditions. Workflow Configuration Tool is reflected in the rule-building process under Policy Center > Controls Orchestration, where administrators create rules, define ownership, select the asset, configure conditions, and enable the rule.

Webhook Notification System is valid because orchestration rules can send notifications outside Forcepoint DSPM, and webhook functionality sends HTTP requests to a configured callback endpoint when a defined condition is met. Incident Management is also core because each rule is automatically added as a card in the Incidents tab, linking detected conditions to operational review and response. Rule-Based Remediation is not the best answer here because remediation is an outcome of automated response workflows, not the named key feature in this option set. References/topics: Controls Orchestration, GQL Rules, Webhooks, Incidents, Policy Center.

NEW QUESTION # 34

Put the following steps in order for applying a filter to a widget of a duplicated dashboard:

1 Select the Edit Widgets button.

2 Save the updated filter.

3 Open the Widget settings.

4 Edit the GQL filter.

Answer:

Explanation:

1 Select the Edit Widgets button.

2 Open the Widget settings.

3 Edit the GQL filter.

4 Save the updated filter.

Explanation:

1 # 3 # 4 # 2

The correct sequence is Select the Edit Widgets button, Open the Widget settings, Edit the GQL filter, and then Save the updated filter. In Forcepoint DSPM Analytics, a duplicated dashboard must first be placed into a widget-editable state before any individual widget configuration can be changed. Forcepoint describes dashboards as being built from panels and widgets, and identifies Edit Widgets as the control used to open the edit view for modifying widgets on a board. (help.forcepoint.com) After edit mode is active, the administrator opens the specific widget's settings because the filter is scoped to that widget rather than the whole dashboard. The GQL filter is then edited to constrain the widget's selected dataset, such as files, trustees, connectors, agents, database tables, or other analytics objects. This follows Forcepoint's dashboard model, where widgets present information from selected datasets and have their own customization options. (help.forcepoint.com) The final action is saving the updated filter so the duplicated dashboard preserves the modified widget logic. References/topics: Analytics, Dashboard Components, Edit Widgets, Widget Settings, GQL Filters, Custom/Duplicated Dashboards.

NEW QUESTION # 35

Ella needs to add a panel to the following dashboard. Where would she click to have access to add a panel to the dashboard?

Answer:

Explanation:

Explanation:

Click EDIT WIDGETS in the upper-right area of the dashboard.

Ella should click the EDIT WIDGETS button near the upper-right side of the dashboard, beside the EXPORT PDF button. This control opens the dashboard edit view, which exposes the controls required to modify dashboard content, including adding widgets and adding panels. In the screenshot, the correct click target is the green-outlined EDIT WIDGETS button above the dashboard panels.

Forcepoint documents dashboards as being primarily constructed from panels and widgets. A panel is the container that organizes one or more widgets, while widgets display selected datasets such as files, trustees, connectors, agents, or other DSPM analytics data. The Forcepoint documentation specifically states: "Edit Widgets: Click the Edit Widget button, to open the edit view." It then lists Add widget and Add panel as functions available from that edit mode.

Therefore, Ella cannot add a panel by clicking the existing charts, the left navigation list, or the dashboard title. She must first enter edit mode through EDIT WIDGETS, then use the available Add panel option.

NEW QUESTION # 36

What are the key organizational elements for creating a dashboard in Forcepoint DSPM? Select two.

- A. Panels
- B. Menus
- C. Status bars
- D. Widgets
- E. Toggle switches

Answer: A,D

Explanation:

The correct answers are Widgets and Panels . In Forcepoint DSPM Analytics, dashboards are organized as boards that present scan-derived security, compliance, and data-risk information. The primary structural components used to build those dashboards are panels and widgets. Forcepoint states that dashboards are

"primarily constructed of panels and widgets," and explains that each panel can contain one or more widgets.

A panel acts as the container that organizes multiple visual components into a coherent dashboard layout, while a widget is the smaller information component that displays data from selected datasets such as files, trustees, connectors, or agents.

This structure matters because dashboards are not just static reports; they are configurable analytical workspaces. Widgets provide the actual data presentation, such as counters, charts, maps, text blocks, tables, incidents, dual data grouping, or multi-counter views. Forcepoint separately lists these as available widget types, each with its own customization options. Panels then provide the organizational layer that groups these widgets logically by use case, such as exposure, classification, incident review, user risk, or compliance posture. Toggle switches, menus, and status bars may appear in the interface, but they are not the dashboard- building elements. References/topics: Analytics, Components of a Dashboard, Widgets, Panels, Custom Dashboards .

NEW QUESTION # 37

.....

With the DSPM-Deploy-and-Administer certification exam you can climb up the corporate ladder faster and achieve your professional career objectives. Do you plan to enroll in the Forcepoint DSPM-Deploy-and-Administer certification exam? Looking for a simple and quick way to crack the DSPM-Deploy-and-Administer test? If your answer is yes then you need to start Forcepoint DSPM-Deploy-and-Administer Test Preparation with Forcepoint DSPM-Deploy-and-Administer PDF Questions and practice tests. With the Pass4sures Certified Forcepoint DSPM - Professional: Deploy and Administer Exam DSPM-Deploy-and-Administer practice test questions you can prepare yourself shortly for the final Forcepoint DSPM-Deploy-and-Administer exam.
