NEW QUESTION # 180

A developer deployed a trigger to update the status__c of Assets related to an Account when the Account's status changes and a nightly integration that updates Accounts in bulk has started to fail with limit failures.

What should the developer change about the code to address the failure while still having the code update all of the Assets correctly?

- **A. Move all of the logic to a Queueable class that queries for and updates the Assets and call it from the trigger.**
- B. Add List<asset> assets = [SELECT id, Status__c FROM Asset WHERE AccountId = : acctId] to line 14 and iterate over the assets list in the for loop on line 15.;
- C. Change the getAssetsToUpdate method to process all Accounts in one call and call it outside of the for loop that starts on line 03.
- D. Add a LIMIT clause to the SOQL query on line 16 to limit the number of Assets queried for an Account.

Answer: A

Explanation:

Why Queueable?

* Queueable Apex allows asynchronous processing, which can handle bulk updates efficiently without hitting governor limits.

* The trigger enqueues the Queueable class to process the asset updates.

Avoiding Limit Failures:

* Moving logic to a Queueable class offloads resource-intensive operations to asynchronous processing.
