## CompTIA Cloud Essentials+ Certification Exam Sample Questions (Q272-Q277):

### NEW QUESTION # 272

An organization plans to keep three of its cloud servers online for another nine months and a fourth server online for a year. The current pricing is \$200 per month per server. The cloud provider announced the sale price of \$1,500 per year per reserved instance. Which of the following represents the cost savings by converting all four of the cloud servers to reserved instances?

- A. \$1,800
- B. \$3,600
- C. \$2,400
- D. \$900

**Answer: A**

Explanation:

3 servers for 9 months =  $3 \times 200 \times 9 = \$5400$

1 server for 12 months =  $1 \times 200 \times 12 = \$2400$

Current estimated cost =  $\$5400 + \$2400 = \$7800$ .

CSP offers flat \$1500 for each instance for a year, so for 4 instances =  $\$1500 \times 4 = \$6000$ .

So, Savings =  $\$7800 - \$6000 = \$1800$ .

### NEW QUESTION # 273

A company's finance team is reporting increased cloud costs against the allocated cloud budget. Which of the following is the BEST approach to match some of the cloud operating costs with the appropriate departments?

- A. Scaling
- B. Showback
- C. Chargeback
- D. Right-sizing

**Answer: C**

Explanation:

Chargeback is the best approach to match some of the cloud operating costs with the appropriate departments. Chargeback is a process where the IT department bills each department for the amount of cloud resources they use, such as compute, storage, network, or software. Chargeback can help the company to allocate the cloud costs more accurately and fairly, as well as to encourage the departments to optimize their cloud consumption and reduce waste. Chargeback can also provide the company with more visibility and accountability of the cloud usage and spending across the organization<sup>12</sup> Chargeback is different from showback, which is a process where the IT department shows each department the amount of cloud resources they use, but does not charge them for it. Showback can also help the company to increase the awareness and transparency of the cloud costs, but it may not have the same impact on the behavior and efficiency of the departments as chargeback<sup>12</sup> Right-sizing and scaling are not approaches to match the cloud costs with the departments, but rather techniques to adjust the cloud resources to the actual demand and performance of the applications or services. Right-sizing and scaling can help the company to save money and improve the cloud utilization, but they do not address the issue of cost allocation or attribution<sup>34</sup>

### NEW QUESTION # 274

A critical internal IT server provisioning process is under review and the IT manager is considering moving the process to the cloud. The IT staff has selected the cloud provider and must now migrate the process. Which of the following MUST the IT staff do to ensure the transition meets the IT manager's requirements?

- A. Pilot the process using cloud resources and perform a comprehensive test.
- B. Ask the server administrator to sign off and approve the implementation plan.
- C. Survey the business users and implement the solution that received the most positive feedback.
- D. Shift the current process to the cloud since the SLA will guarantee 99.999% availability.

**Answer: A**

### NEW QUESTION # 275

Which of the following stores transactions in a distributed ledger of which all users have a copy?

- A. Big Data
- B. Blockchain
- C. Artificial intelligence
- D. Machine learning

**Answer: B**

### NEW QUESTION # 276

Which of the following is related to data availability in the cloud?

- A. Elasticity
- **B. Resiliency**
- C. Scalability
- D. Deduplication

**Answer: B**
