## Drupal-Site-Builder Valid Vce | Dumps Drupal-Site-Builder Free Download

The Drupal-Site-Builder exam bootcamp is quite necessary for the passing of the exam. Our Drupal-Site-Builder exam bootcamp have the knowledge point as well as the answers. It will improve your sufficiency, and save your time. Besides, we have the top-ranking information safety protection system, and your information, such as name, email address will be very safe if you buy the Drupal-Site-Builder bootcamp from us. Once you finished the trade our system will conceal your information, and if order is completely finished, we will clean away your information, so you can buy our Drupal-Site-Builder with ease.

## Acquia Certified Drupal Site Builder Exam for Drupal 10, 11 Sample Questions (Q45-Q50):

### NEW QUESTION # 45

You have created a new Comment type, but when you try to add a comment field to a Content type, you can't select your new Comment type.

- A. Custom comment types can only be added to default Content types.
- B. "Allow comments" is not checked in the Content type settings.
- **C. In your new Comment type, you didn't select "Content" as the Target entity type.**
- D. You need to clear the site caches to see the new option.

**Answer: C**

Explanation:

In Drupal, a comment field can only use comment types that are configured for the same target entity type as the entity you are attaching comments to. When you add a comment field to a Content type (node), Drupal expects a comment type whose Target entity type is Content . If the new comment type was created with another target entity type, such as custom block or user, it will not appear as a selectable option when adding that comment field to a content type. This is consistent with Drupal core's comment architecture and field behavior.

The other choices do not match Drupal's documented behavior. "Allow comments" is not a separate prerequisite checkbox that controls whether a comment type appears; instead, comments are enabled by adding a comment field to the content type. Drupal documentation for administering comment settings confirms that comment capability is added from Manage fields by adding or reusing a comment field. There is also no documented requirement that custom comment types work only on default content types, and cache clearing is not described as the fix for this selection issue.

### NEW QUESTION # 46

You have created a new View on the development environment. How will you export the View to the production environment?

- A. Use backup and migrate module to export the view
- B. Select synchronize configurations option on production environment
- **C. Make the required changes to the development site. Partial export using single export option and import on the live site**
- D. This requires development effort and cannot be done by Drupal admin interface

**Answer: C**

Explanation:

In Drupal 10 and Drupal 11, a View is stored as configuration , and Drupal provides a built-in Configuration Management system to move configuration between environments. According to the official Drupal User Guide, when you want to move a single configuration item (such as a View), the recommended approach is to use the Single Export and Single Import functionality available in the admin interface.

On the development site, you navigate to Configuration # Development # Configuration synchronization # Export # Single item , select View , and copy the YAML configuration. Then, on the production site, you go to Import # Single item and paste the configuration to import it.

Option A refers to full configuration synchronization, which is typically used for complete site configuration deployment, not for a single View. Option B is incorrect because Backup and Migrate is meant for database backups, not configuration transfer. Option C is incorrect because Drupal provides a UI-based method for this task.

Thus, the correct and documented approach is partial export/import using the single configuration option, making D the correct answer.

### NEW QUESTION # 47

You have a Corporate site where all traffic is anonymous. On the site, you have been getting thousands of user registrations every day. You notice that most of the registrations are spam. What will you do to prevent this?

- A. Set "Who can register accounts" to "Visitors," and check "Enable password strength indicator."
- B. Add user/password in your .htaccess, so that only people who know the credentials can access your site and create an account.
- **C. Set "Who can register accounts" to "Administrators only," and assign the task of new account creation to site admins.**
- D. Set the personal contact form for new users to disabled, and set email verification to use the personal contact form method.

**Answer: C**

Explanation:

For a corporate site where public visitors do not need self-service accounts, the correct Drupal site-building solution is to disable visitor registration. Drupal's official User Guide for Configuring User Account Settings says to go to Configuration > People > Account settings and, under Registration and cancellation, select

"Administrators only" as the people with permission to register user accounts. This turns off public account creation and is the standard Drupal method for stopping spam registrations on sites that do not need open sign-up.

The other choices do not match Drupal's documented account-management approach. Option B still allows visitors to create accounts, so it does not prevent spam registrations; a password strength indicator is unrelated to blocking bot sign-ups. Option A would protect the entire site at the web-server level, which is not the intended Drupal account-registration setting and would block all anonymous access, contradicting the site's normal public use. Option D refers to unrelated contact-form behavior and does not control account creation.

Drupal's account settings documentation specifically identifies "Administrators only" as the way to stop visitor registration, making C the verified answer.

#### NEW QUESTION # 48

You are building a conference website. All attendees are required to submit an RSVP form. The submissions of the form should be emailed to the attendee and site administrator.

How will you build this functionality?

- A. Download and enable the RSVP module.
- B. Enable site-wide contact form, rename it to RSVP and configure email functionality in the form.
- C. Create a content type called RSVP with the required fields. Give the permission to create RSVP content to the attendee role.
- **D. Create a new contact form type called RSVP and configure email functionality in the form.**

**Answer: D**

Explanation:

Drupal 10 and Drupal 11 include the Contact module in core, which allows administrators to create multiple contact form types. Each contact form can have its own configuration, including recipients and email notifications. According to Drupal documentation, you can create custom contact forms (e.g., RSVP) and configure them to send emails to specified recipients when a user submits the form.

Option A is correct because creating a dedicated RSVP contact form allows you to configure email notifications to both the attendee (via auto-reply) and the site administrator. This approach uses Drupal core functionality and is the recommended way to handle simple form submissions with email notifications.

Option B is incorrect because content types are used for structured content, not form submissions with email handling. Option C is not ideal because the site-wide contact form is meant for general communication and does not provide flexibility for RSVP-specific workflows. Option D is unnecessary since Drupal core already provides the required functionality.

Thus, the best and documented solution is to create a custom contact form and configure its email settings, making A correct.

#### NEW QUESTION # 49

Your website is showing a warning message that a contributed module "Password Policy" has a new security update.

What action will you take?

- A. No action is needed as security updates are not important.
- **B. Download the latest version of the module. And visit the update.php page to complete the update.**
- C. Uninstall the currently installed module. Download the latest version of the module and configure it again.
- D. Drupal will update and install security update automatically on the next cron run.

**Answer: B**

Explanation:

In Drupal 10 and Drupal 11, security updates for contributed modules must be applied promptly to protect the site from known vulnerabilities. Drupal core provides a built-in Update Manager module that notifies administrators when updates, especially security releases, are available. However, Drupal does not automatically install updates, including during cron runs, so option C is incorrect. The correct process, as documented in Drupal's official update procedures, involves downloading the latest recommended release of the module (typically via Composer or manual replacement), and then running database updates using the /update.php script or

drush updb . This ensures that any schema changes required by the new version are properly applied.

Option B is incorrect because uninstalling a module is unnecessary and can lead to data loss or configuration issues. Option A is clearly wrong, as ignoring security updates exposes the site to risks.

Therefore, the proper and documented approach is to update the module codebase and run update.php to finalize the update process, making option D the correct answer.

## NEW QUESTION # 50

.....

No doubt the Acquia Certified Drupal Site Builder Exam for Drupal 10, 11 (Drupal-Site-Builder) certification is one of the most challenging certification exams in the market. This Acquia Certified Drupal Site Builder Exam for Drupal 10, 11 (Drupal-Site-Builder) certification exam gives always a tough time to Acquia Certified Drupal Site Builder Exam for Drupal 10, 11 (Drupal-Site-Builder) exam candidates. The VCEdumps understands this hurdle and offers recommended and real Acquia Drupal-Site-Builder Exam Practice questions in three different formats. These formats hold high demand in the market and offer a great solution for quick and complete Acquia Certified Drupal Site Builder Exam for Drupal 10, 11 (Drupal-Site-Builder) exam preparation.

**Drupal-Site-Builder Valid Vce:** <https://www.vcedumps.com/Drupal-Site-Builder-examcollection.html>

Taking Drupal-Site-Builder exam dumps from VCEdumps helps eliminate exam anxiety, VCEdumps is best to get Drupal-Site-Builder exam questions braindumps to pass an exam in the first attempt, Acquia Authorized Drupal-Site-Builder Pdf This will ensure Success in Exams everytime, Acquia Authorized Drupal-Site-Builder Pdf So our company has taken all customers' requirements into account, Acquia Authorized Drupal-Site-Builder Pdf We provide considerate customer service to the clients.

His detailed demonstrations often include the actual syntax of command-line utilities, User Buffered I/O, Taking Drupal-Site-Builder Exam Dumps from VCEdumps helps eliminate exam anxiety.

VCEdumps is best to get Drupal-Site-Builder exam questions braindumps to pass an exam in the first attempt, This will ensure Success in Exams everytime, So our company has taken all customers' requirements into account.
