NEW QUESTION # 315

Which of the following description of the virtual connection in OSPF is wrong?

- A. The virtual connection does not necessarily belong to the backbone area, and the specific districts and cities it belongs to should be determined according to the actual topology.
- B. Virtual connections can be used to solve the problem of logical discontinuity in the backbone area.
- C. A virtual connection can be established on any two area border routers, but these two border routers are required
- D. The virtual connection belongs to area 0

Answer: A

NEW QUESTION # 316

Multicast applies to any point-to-multipoint data transmission. Which of the following types of application data can be forwarded in multicast mode?

- A. Real-time audio conferencing
- B. Network TV
- C. Data warehouse
- D. Livestreaming

Answer: A,B,D

Explanation:

Comprehensive and Detailed Step-by-Step Explanation:

1. Multicast Applications:

Multicast is ideal for applications where data is sent from one source to multiple receivers, such as:

* Real-Time Audio Conferencing: Multicast delivers audio streams to participants without duplicating the same data for each receiver.

* Livestreaming: Streaming live events to viewers using multicast minimizes bandwidth usage by delivering a single stream to multiple users.

* Network TV: Multicast is used in IPTV to broadcast TV channels efficiently.

2. Why Data Warehouse is Incorrect:

* Data warehouse does not involve point-to-multipoint transmission. Data warehouse activities (e.g., analytics or database queries) typically use unicast connections for communication between the server and the client.

3. Summary:

* The correct options are A, B, C, as they all involve point-to-multipoint communication supported by multicast.
