

Exam SAP C_BCBDC_2505 Study Guide | C_BCBDC_2505 Latest Test Simulator

BONUS!!! Download part of Exam4Docs C_BCBDC_2505 dumps for free: <https://drive.google.com/open?id=1edTvr4zCTdG3sdnOlnxCXa1eW9xgg6tQ>

We guarantee that after purchasing our C_BCBDC_2505 exam torrent, we will deliver the product to you as soon as possible within ten minutes. So you don't need to wait for a long time and worry about the delivery time or any delay. We will transfer our SAP Certified Associate - SAP Business Data Cloud prep torrent to you online immediately, and this service is also the reason why our C_BCBDC_2505 Test Braindumps can win people's heart and mind. Therefore, you are able to get hang of the essential points in a shorter time compared to those who are not willing to use our C_BCBDC_2505 exam torrent.

SAP C_BCBDC_2505 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">SAP Datasphere: This section of the exam measures the skills of Solution Consultants and covers a comprehensive understanding of SAP Datasphere. Candidates should demonstrate knowledge of data modeling, transformation, and harmonization using SAP Datasphere tools. It evaluates how well they can work with data layer structuring, semantic modeling, and integration to support real-time data access for various business applications.
Topic 2	<ul style="list-style-type: none">SAP Analytics Cloud: This section of the exam measures the skills of Data Analysts and covers the use of SAP Analytics Cloud in data visualization, story building, and dashboard creation. Candidates should be familiar with its planning and predictive capabilities, along with how to utilize data insights to drive business decision-making. It also includes managing user access and collaborating through shared analytics assets.
Topic 3	<ul style="list-style-type: none">SAP Business Data Cloud: This section of the exam measures the skills of Data Analysts and covers core concepts of the SAP Business Data Cloud. Candidates are expected to understand its key components, integration mechanisms, and how it functions as a foundation for unified data management across SAP and non-SAP environments. The focus is on enabling data connectivity and providing governed access to data across the enterprise.

[Fully Updated] SAP C_BCBDC_2505 Dumps With Latest C_BCBDC_2505 Exam Questions (2026)

Our C_BCBDC_2505 exam dumps boost multiple functions and they can help the clients better learn our study materials and prepare for the test. Our C_BCBDC_2505 learning prep boosts the self-learning, self-evaluation, statistics report, timing and test stimulation functions and each function plays their own roles to help the clients learn comprehensively. The self-learning and self-evaluation functions of our C_BCBDC_2505 Guide materials help the clients check the results of their learning of the study materials.

SAP Certified Associate - SAP Business Data Cloud Sample Questions (Q33-Q38):

NEW QUESTION # 33

Which steps are executed when an SAP Business Data Cloud Intelligent Application is installed? Note: There are 2 correct answers to this question.

- A. Connection of SAP Datasphere with SAP Analytics Cloud
- B. Execution of a machine-learning algorithm
- C. Creation of a dashboard for visualization
- D. Replication of data from the business applications to Foundation Services

Answer: A,D

Explanation:

When an SAP Business Data Cloud (BDC) Intelligent Application is installed, two key foundational steps are executed to ensure its operational readiness. Firstly, there is the connection of SAP Datasphere with SAP Analytics Cloud (SAC). This establishes the vital link that allows the intelligent application's analytical models, which reside and are managed within SAP Datasphere, to be consumed and visualized in SAC. SAC serves as the front-end for analytical consumption, enabling users to interact with the insights generated by the intelligent application. Secondly, the installation process involves the replication of data from the business applications to Foundation Services. Foundation Services act as the initial landing zone for raw business data within the BDC architecture. This data replication ensures that the intelligent application has access to the necessary operational data from source systems to perform its functions, whether it involves data processing, enrichment, or feeding machine learning models. These steps are crucial for the intelligent application to ingest, process, and ultimately present valuable business insights.

NEW QUESTION # 34

What are the prerequisites for loading data using Data Provisioning Agent (DP Agent) for SAP Datasphere? Note: There are 2 correct answers to this question.

- A. The data provisioning adapter is installed.
- B. The DP Agent is configured for a dedicated space in SAP Datasphere.
- C. The Cloud Connector is installed on a local host.
- D. The DP Agent is installed and configured on a local host.

Answer: A,D

Explanation:

To load data into SAP Datasphere using the Data Provisioning Agent (DP Agent), two crucial prerequisites must be met. Firstly, the DP Agent must be installed and configured on a local host (A). The DP Agent acts as a bridge between your on-premise data sources and SAP Datasphere in the cloud. It needs to be deployed on a server within your network that has access to the source systems you wish to connect. Secondly, the relevant data provisioning adapter must be installed (B) within the DP Agent framework. Adapters are specific software components that enable the DP Agent to connect to different types of source systems (e.g., SAP HANA, Oracle, Microsoft SQL Server, filesystems). Without the correct adapter, the DP Agent cannot communicate with and extract data from your chosen source. While the Cloud Connector (C) is often used for secure access to SAP backend systems in the cloud, it's not a direct prerequisite for the DP Agent itself for all data sources. Configuring the DP Agent for a specific space (D) is a step after the initial installation and adapter setup.

NEW QUESTION # 35

What are the three primary access levels you can assign when sharing files?

There are 3 correct answers to this question.

Response:

- A. View
- B. Full Control
- C. Read Only
- D. Read/Write
- E. Edit

Answer: A,B,E

NEW QUESTION # 36

Which options do you have when using the remote table feature in SAP Datasphere? Note: There are 3 correct answers to this question.

- A. Data access can be switched from virtual to persisted, but not the other way around.
- B. Data can be persisted in SAP Datasphere by creating a snapshot (copy of data).
- C. Data can be accessed virtually by remote access to the source system.
- D. Data can be persisted by using real-time replication.
- E. Data can be loaded using advanced transformation capabilities.

Answer: B,C,D

Explanation:

The remote table feature in SAP Datasphere offers significant flexibility in how data from external sources is consumed and managed. Firstly, data can be accessed virtually by remote access to the source system (E). This means Datasphere does not store a copy of the data; instead, it queries the source system in real-time when the data is requested. This ensures that users always work with the freshest data. Secondly, data can be persisted in SAP Datasphere by creating a snapshot (copy of data) (C). This allows users to explicitly load a copy of the remote table's data into Datasphere at a specific point in time, useful for performance or offline analysis. Lastly, data can be persisted by using real-time replication (D). For certain source systems and configurations, Datasphere supports continuous, real-time replication, ensuring that changes in the source system are immediately reflected in the persisted copy within Datasphere. Option A is incorrect as the access mode cannot be arbitrarily switched, and option B refers to data flow capabilities, not inherent remote table access options.

NEW QUESTION # 37

What is the main storage type of the object store in SAP Business Data Cloud?

- A. SAP BW/4HANA DataStore objects (advanced)
- B. SAP HANA data lake files
- C. SAP HANA extended tables
- D. SAP BW/4HANA InfoObjects

Answer: B

Explanation:

The primary storage type for the object store within the SAP Business Data Cloud (BDC) architecture is SAP HANA data lake files. SAP BDC is designed to handle vast amounts of diverse data, including semi-structured and unstructured data, which is efficiently stored in a data lake. The SAP HANA data lake, specifically its file storage component, provides a highly scalable and cost-effective solution for retaining raw, historical, and detailed data. This contrasts with traditional relational databases (like SAP HANA extended tables) or data warehousing constructs (like BW/4HANA DataStore objects or InfoObjects), which are optimized for structured, aggregated data and specific query patterns. The object store's reliance on data lake files in BDC underscores its capability to manage enterprise-wide data regardless of its structure, making it suitable for a wide range of analytical workloads, including those involving machine learning and advanced analytics where raw data access is crucial.
