The SAP Certified Associate - Integration Developer (C-CPI-2506) practice questions have a close resemblance with the actual SAP Certified Associate - Integration Developer (C-CPI-2506) exam. Our SAP C-CPI-2506 exam dumps give help to give you an idea about the actual SAP Certified Associate - Integration Developer (C-CPI-2506) exam. You can attempt multiple SAP Certified Associate - Integration Developer (C-CPI-2506) exam questions on the software to improve your performance.

SAP C-CPI-2506 Exam Syllabus Topics:

Topic	Details
Topic 1	Managing APIs: This section of the exam measures the skills of Solution Architects and focuses on managing APIs within the SAP ecosystem. It covers topics such as API provisioning, lifecycle management, security policies, and monitoring, ensuring candidates can handle APIs effectively for enterprise integration needs.
Topic 2	Implementing Cloud Integration: This section of the exam measures the skills of Integration Consultants and examines how cloud integration flows are designed and deployed. It emphasizes creating integration scenarios, handling connectivity, and applying best practices to build efficient, secure, and reliable integration processes in SAP's cloud environment.

Topic 3	• SAP Event Mesh: This section of the exam measures the skills of Solution Architects and centers on using SAP Event Mesh to support event-driven integration. It highlights the importance of asynchronous communication, event publishing, and subscription models, allowing organizations to build scalable and decoupled systems.
Topic 4	• SAP Integration Suite Overview: This section of the exam measures the skills of Integration Consultants and covers the foundational concepts of the SAP Integration Suite. It provides an understanding of the suite's capabilities, its role in connecting applications, and its relevance in modern cloud-based integration scenarios.

Amazing C-CPI-2506 Exam Simulation: SAP Certified Associate - Integration Developer give you the latest Practice Dumps - TopExamCollection

With our numerous advantages of our C-CPI-2506 latest questions and service, what are you hesitating for? Our company always serves our clients with professional and precise attitudes on our C-CPI-2506 exam questions, and we know that your satisfaction is the most important thing for us. We always aim to help you pass the C-CPI-2506 Exam smoothly and sincerely hope that all of our candidates can enjoy the tremendous benefit of our C-CPI-2506 exam material, which might lead you to a better future! And the high pass rate of C-CPI-2506 learning material as 99% to 100% won't let you down.

SAP Certified Associate - Integration Developer Sample Questions (Q45-Q50):

NEW QUESTION # 45

In the SAP Integration Suite, where can you change the virtual host name?

- A. Settings APIs
- B. Design APIs
- C. Discover - APIs
- D. Configure ? APIs

Answer: A

Explanation:

In the SAP Integration Suite, you can change the virtual host name in the Settings APIs. The Settings APIs allow you to configure various aspects of your API provider, such as the virtual host name, the base path, the authentication method, and the CORS settings. Reference: Integration Software | SAP Integration Suite, Modernize Integration with SAP Integration Suite | openSAP

NEW QUESTION # 46

You have created an API provider of the type Internet. What http response code indicates success?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: D

Explanation:

In API Management (Integration Suite), when you configure an API provider of type Internet, the system checks connectivity by sending a request to the backend.

HTTP 200 # Success (OK). The endpoint is reachable and functioning.

401 (Unauthorized) # Authentication failure.

403 (Forbidden) # Authorization failure.

502 (Bad Gateway) # Network or proxy error.

Therefore, the successful response code indicating proper connection is 200.

NEW QUESTION # 47

You want to dispatch messages only when a child element "Product" exists. Which condition do you set?

- A. /ProductSet/counter(Product)>0
- **B. ProductSet/count(Product)>0**
- C. /ProductSet/count(Product)<0)
- D. /ProductSet/count(Product)=0

Answer: B

Explanation:

The condition ProductSet/count(Product)>0 checks if the number of Product elements in the ProductSet element is greater than zero, which means that a child element "Product" exists. This condition can be used to dispatch messages only when a Product element is present. Reference: SAP Integration Suite | SAP Community, Integration Software | SAP Integration Suite

NEW QUESTION # 48

What are some advantages of the cloud integration capability within SAP Integration Suite? Note: There are 2 correct answers to this question.

- A. Integration processes can be developed offline.
- B. Customer-to-Customer(C2C) integrations can be developed
- **C. A local installation is not required.**
- **D. Predefined scenarios can be used out-of-the-box.**

Answer: C,D

Explanation:

Some advantages of the cloud integration capability within SAP Integration Suite are:

A local installation is not required. The cloud integration capability is a cloud-based service that runs on SAP Business Technology Platform (BTP). It does not require any installation or maintenance on your local system. You can access it from any web browser and start developing and deploying integration flows using a graphical user interface or an Eclipse-based tooling.

Predefined scenarios can be used out-of-the-box. The cloud integration capability provides a rich set of predefined integration scenarios that cover various use cases and domains, such as SAP-to-SAP integration, SAP-to-non-SAP integration, hybrid integration, process orchestration, and so on. You can browse and discover these scenarios from the Discover page of the cloud integration web UI or from the SAP API Business Hub. You can use these scenarios as they are or customize them according to your needs. Reference: Cloud Integration Capability Overview | SAP Help Portal, Discover Integration Content | SAP Help Portal

NEW QUESTION # 49

You configured a content modifier as follows: Action Create. Name: ProductID. Source Type: XPath. Source Value: //ProductID. Data Type: java lang string. After testing the content modifier, you receive an error message that contains the following fragment: java.lang.ClassNotFoundException java lang string. What caused the error message?

- A. Incorrect source type
- **B. Incorrect data type**
- C. Incorrect source value
- D. Incorrect name

Answer: B

Explanation:

The error message is caused by an incorrect data type in the content modifier configuration. The data type should be java.lang.String instead of java lang string. The data type defines the type of the value that will be stored in the header or property of the message. It should match one of the supported Java classes, such as java.lang.String, java.lang.Integer, java.lang.Boolean, and so on. If the data type is not valid, a java.lang.ClassNotFoundException will be thrown. Reference: Content Modifier | SAP Help Portal, Getting clear with SAP Integration Suite Content Modifier | SAP Blogs
