

100% Pass 2026 Marvelous Salesforce Data-Cloud-Consultant: Valid Salesforce Certified Data Cloud Consultant Mock Exam

BTW, DOWNLOAD part of Prep4pass Data-Cloud-Consultant dumps from Cloud Storage: https://drive.google.com/open?id=121H_x3sw-rXArd8_GfPz4yFQRkO3cYS9

In order to pass the exam and fight for a brighter future, these people who want to change themselves need to put their ingenuity and can do spirit to work. More importantly, it is necessary for these people to choose the convenient and helpful Data-Cloud-Consultant test questions as their study tool in the next time. Because their time is not enough to prepare for the exam, and a lot of people have difficulty in preparing for the exam, so many people who want to pass the Data-Cloud-Consultant exam and get the related certification in a short time have to pay more attention to the study materials. In addition, best practice indicates that people who have passed the Data-Cloud-Consultant Exam would not pass the exam without the help of the Data-Cloud-Consultant reference guide. So the study materials will be very important for all people. If you also want to pass the exam and get the related certification in a short, the good study materials are the best choice for you. Now we are going to make an introduction about the Data-Cloud-Consultant exam prep from our company for you.

Salesforce Data-Cloud-Consultant Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> • Data Cloud Setup and Administration: This topic includes applying Data Cloud permissions, permission sets, org-wide settings. It describes and configures data stream types, and data bundles. Moreover, it discusses use cases for data spaces, creating data spaces, managing and administering Data Cloud using reports, dashboards, flows, packaging, data kits, diagnosing and exploring data using Data Explorer, Profile Explorer, and APIs.
Topic 2	<ul style="list-style-type: none"> • Act on Data: This topic defines activations and their basic use cases, using attributes and related attributes, identifying and analyzing timing dependencies affecting the Data Cloud lifecycle. Additionally it focuses on troubleshooting common problems with activations, and using data actions, including their requirements and intended use cases.
Topic 3	<ul style="list-style-type: none"> • Data Ingestion and Modeling: This topic covers the different transformation capabilities within Data Cloud. It includes describing processes and considerations for data ingestion from various sources, defining, mapping, and modeling data using best practices aligned with identity resolution. Lastly, it discusses using available tools to inspect and validate ingested and modeled data.

Topic 4	<ul style="list-style-type: none"> Identity Resolution: It describes matching and how its rule sets are applied. Furthermore, it discusses reconciling data and its rule sets, the results of identity resolution, and use cases.
Topic 5	<ul style="list-style-type: none"> Data Cloud Overview: This topic covers Data Cloud's function, key terminology, business value, typical use cases, the Data Cloud lifecycle, dependencies, and principles of data ethics. These sub-topics provide an overview of Data Cloud's capabilities and applications.

Data-Cloud-Consultant Advanced Testing Engine & Data-Cloud-Consultant Excellect Pass Rate

If you are finding a study material to prepare your exam, our material will end your search. Our Data-Cloud-Consultant exam torrent has a high quality that you can't expect. I think our Data-Cloud-Consultant prep torrent will help you save much time, and you will have more free time to do what you like to do. I can guarantee that you will have no regrets about using our Data-Cloud-Consultant Test Braindumps When the time for action arrives, stop thinking and go in, try our Data-Cloud-Consultant exam torrent, you will find our products will be a very good choice for you to pass your exam and get you certificate in a short time.

Salesforce Certified Data Cloud Consultant Sample Questions (Q140-Q145):

NEW QUESTION # 140

A consultant wants to confirm the Identity resolution they Just set up. Which two features can the consultant use to validate the data on a unified profile?

Choose 2 answers

- A. Identity Resolution
- B. Data Explorer
- C. Query API
- D. Data Actions

Answer: B,C

Explanation:

To validate the data on a unified profile after setting up identity resolution, the consultant can use Data Explorer and the Query API .

Here's why:

Understanding Identity Resolution Validation

Identity resolution combines data from multiple sources into a unified profile.

Validating the unified profile ensures that the resolution process is working correctly and that the data is accurate.

Why Data Explorer and Query API?

Data Explorer :

Data Explorer is a built-in tool in Salesforce Data Cloud that allows users to view and analyze unified profiles.

It provides a detailed view of individual profiles, including resolved identities and associated attributes.

Query API :

The Query API enables programmatic access to unified profiles and related data.

Consultants can use the API to query specific profiles and validate the results of identity resolution programmatically.

Other Options Are Less Suitable :

A . Identity Resolution : This refers to the process itself, not a tool for validation.

B . Data Actions : Data actions are used to trigger workflows or integrations, not for validating unified profiles.

Steps to Validate Unified Profiles

Using Data Explorer :

Navigate to Data Cloud > Data Explorer .

Search for a specific profile and review its resolved identities and attributes.

Verify that the data aligns with expectations based on the identity resolution rules.

Using Query API :

Use the Query API to retrieve unified profiles programmatically.

Compare the results with expected outcomes to confirm accuracy.

Conclusion

The consultant should use Data Explorer and the Query API to validate the data on unified profiles, ensuring that identity resolution is functioning as intended.

NEW QUESTION # 141

A consultant needs to create a data graph based on several DLOs, Which step should the consultant take to make this work?

- A. Map the DLOs directly to a data graph.
- B. Batch transform the DLOs to multiple DMOs and activate these with the data graph.
- C. Map the DLOS to DMOS and use these in the data graph.
- D. Use a data action to update the data graph with the DLO data

Answer: C

Explanation:

To create a data graph based on several Data Lake Objects (DLOs) , the consultant should map the DLOs to Data Model Objects (DMOs) and use these in the data graph. Here's why:

Understanding Data Graphs

A data graph in Salesforce Data Cloud represents relationships between entities (e.g, customers, accounts, orders) and their attributes.

It is built using Data Model Objects (DMOs) , which provide a standardized structure for unified profiles and related data.

Why Map DLOs to DMOs?

Role of DLOs and DMOs :

DLOs are raw data sources ingested into Data Cloud.

DMOs are standardized objects used for identity resolution and unified profiles.

Mapping DLOs to DMOs ensures that raw data is transformed into a structured format suitable for data graphs.

Building the Data Graph :

Once the DLOs are mapped to DMOs, the consultant can use the DMOs to define relationships and build the data graph.

This approach ensures consistency and alignment with the unified data model.

Other Options Are Less Suitable :

A . Use a data action to update the data graph with the DLO data : Data actions are used for triggering workflows, not for building data graphs.

C . Map the DLOs directly to a data graph : DLOs cannot be directly mapped to a data graph; they must first be transformed into DMOs.

D . Batch transform the DLOs to multiple DMOs and activate these with the data graph : This is overly complex and unnecessary when mapping DLOs to DMOs suffices.

Steps to Create the Data Graph

Step 1: Map DLOs to DMOs

Navigate to Data Cloud > Data Streams and map the relevant fields from the DLOs to the corresponding DMOs.

Step 2: Define Relationships

Use the Data Model tab to define relationships between DMOs (e.g, linking Individuals to Accounts).

Step 3: Build the Data Graph

Use the mapped DMOs to create the data graph, defining nodes (entities) and edges (relationships).

Step 4: Validate the Graph

Test the data graph to ensure it accurately represents the desired relationships and data flow.

Conclusion

The consultant should map the DLOs to DMOs and use these in the data graph to ensure a structured and consistent approach to building relationships between entities.

NEW QUESTION # 142

A Data Cloud consultant is evaluating the initial phase of the Data Cloud lifecycle for a company. Which action is essential to effectively begin the Data Cloud lifecycle?

- A. Migrate the existing data into the Customer 360 Data Model.
- B. Use calculated insights determine the benefits of Data Cloud for this company.
- C. Analyze and partition the data into data spaces.
- D. Identify use cases and the required data sources and data quality.

Answer: D

Explanation:

* Data Cloud Lifecycle: The initial phase of the Salesforce Data Cloud lifecycle is critical for setting the foundation for successful data integration and utilization.

* Identifying Use Cases:

Importance: Defining clear use cases helps in understanding the business objectives and how Data Cloud can address them.

Required Data Sources: Identifying the necessary data sources ensures that relevant data is ingested into Data Cloud.

Data Quality: Assessing data quality is essential for accurate and reliable data analysis and insights.

* Actions:

Step 1: Engage with stakeholders to define specific use cases for Data Cloud.

Step 2: Identify and catalog the required data sources for these use cases.

Step 3: Evaluate the quality of data from these sources to ensure they meet the standards for effective data analysis.

Salesforce Data Cloud Lifecycle

NEW QUESTION # 143

A Data Cloud consultant is evaluating the initial phase of the Data Cloud lifecycle for a company.

Which action is essential to effectively begin the Data Cloud lifecycle?

- A. Migrate the existing data into the Customer 360 Data Model.
- B. Use calculated insights determine the benefits of Data Cloud for this company.
- C. Analyze and partition the data into data spaces.
- **D. Identify use cases and the required data sources and data quality.**

Answer: D

Explanation:

Data Cloud Lifecycle: The initial phase of the Salesforce Data Cloud lifecycle is critical for setting the foundation for successful data integration and utilization.

Identifying Use Cases:

* Importance: Defining clear use cases helps in understanding the business objectives and how Data Cloud can address them.

* Required Data Sources: Identifying the necessary data sources ensures that relevant data is ingested into Data Cloud.

* Data Quality: Assessing data quality is essential for accurate and reliable data analysis and insights.

Actions:

* Step 1: Engage with stakeholders to define specific use cases for Data Cloud.

* Step 2: Identify and catalog the required data sources for these use cases.

* Step 3: Evaluate the quality of data from these sources to ensure they meet the standards for effective data analysis.

NEW QUESTION # 144

When trying to disconnect a data source an error will be generated if it has which two dependencies associated with it?

Choose 2 answers

- **A. Segment**
- B. Activation
- **C. Data stream**
- D. Activation target

Answer: A,C

Explanation:

When disconnecting a data source in Salesforce Data Cloud, the system checks for active dependencies that rely on the data source. Based on Salesforce's official documentation (Disconnect a Data Source), the error occurs if the data source has data streams or segments associated with it. Here's the breakdown:

Key Dependencies That Block Disconnection

Data Stream (Option B):

Data Stream (Option B):

Why It Matters: A data stream is the pipeline that ingests data from the source into Data Cloud. If an active data stream is connected to the data source, disconnecting the source will fail because the stream depends on it for ongoing data ingestion.

Resolution: Delete or pause the data stream first.

Documentation Reference: "Before disconnecting a data source, delete all data streams that are associated with it." (Salesforce Help Article) Segment (Option C):

Why It Matters: Segments built using data from the source will reference that data source. Disconnecting the source would orphan these segments, so the system blocks the action.

Resolution: Delete or modify segments that depend on the data source.

Documentation Reference: "If there are segments that use data from the data source, you must delete those segments before disconnecting the data source." (Salesforce Help Article) Why Other Options Are Incorrect Activation (A): Activations send segments to external systems (e.g., Marketing Cloud) but do not directly depend on the data source itself. The dependency chain is Segment # Activation, not Data Source # Activation.

Segment # Activation, not Data Source # Activation.

Activation Target (D): Activation targets (e.g., Marketing Cloud) are destinations and do not tie directly to the data source.

Steps to Disconnect a Data Source

Delete Dependent Segments: Navigate to Data Cloud > Segments and remove any segments built using the data source.

Delete or Pause Data Streams: Go to Data Cloud > Data Streams and delete streams linked to the data source.

Disconnect the Data Source: Once dependencies are resolved, disconnect the source via Data Cloud > Data Sources.

NEW QUESTION # 145

.....

You can easily install Salesforce Data-Cloud-Consultant exam questions file on your desktop computer, laptop, tabs, and smartphone devices and start Salesforce Certified Data Cloud Consultant (Data-Cloud-Consultant) exam dumps preparation without wasting further time. Whereas the other two Salesforce Data-Cloud-Consultant Practice Test software is concerned, both are the mock Salesforce Certified Data Cloud Consultant (Data-Cloud-Consultant) exam that will give you a real-time Data-Cloud-Consultant practice exam environment for preparation.
