## Pass Guaranteed 2026 CV0-004: Perfect CompTIA Cloud+ (CV0-004) Certification Exam Valid Exam Voucher

Holding a certification in a certain field definitely shows that one have a good command of the CV0-004 knowledge and professional skills in the related field. However, the majority of the candidates for the CV0-004 exam are those who do not have enough spare time. But our company can provide the anecdote for you--our CV0-004 Study Materials. Under the guidance of our CV0-004 exam practice, you can definitely pass the exam as well as getting the related certification with the minimum time and efforts. Our CV0-004 exam questions will never let you down.

## CompTIA Cloud+ (CV0-004) Certification Exam Sample Questions (Q76-Q81):

**NEW QUESTION # 76**

An engineer made a change to an application and needs to select a deployment strategy that meets the following requirements:

- \* Is simple and fast
- \* Can be performed on two identical platforms

Which of the following strategies should the engineer use?

- A. Rolling
- B. in-place
- C. Blue-green
- D. Canary

**Answer: C**

Explanation:

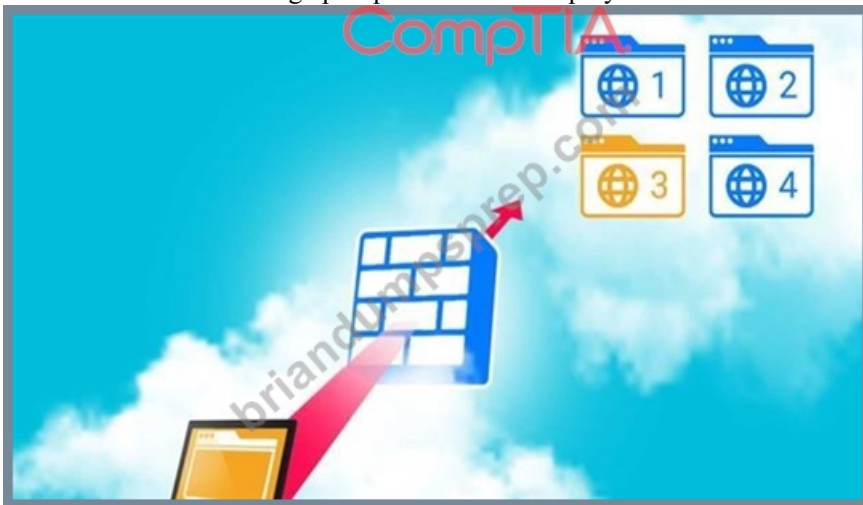

The blue-green deployment strategy is ideal for scenarios where simplicity and speed are crucial. It involves two identical production environments: one (blue) hosts the current application version, while the other (green) is used to deploy the new version. Once testing is completed on the green environment and it's ready to go live, traffic is switched from blue to green, ensuring a quick and efficient rollout with minimal downtime. This method allows for immediate rollback if issues arise, by simply redirecting the traffic back to the blue environment.

Reference: CompTIA Cloud+ material emphasizes the importance of understanding various cloud deployment strategies, including blue-green, and their application in real-world scenarios to ensure efficient and reliable software deployment in cloud environments.

**NEW QUESTION # 77**

**SIMULATION 3**

A company hosts various containerized applications for business uses. A client reports that one of its routine business applications fails to load the web-based login prompt hosted in the company cloud.

**INSTRUCTIONS**

Click on each device and resource. Review the configurations, logs, and characteristics of each node in the architecture to diagnose the issue. Then, make the necessary changes to the WAF configuration to remediate the issue.

Reset to Default    Save    Close

CompTIA

**Answer:**

**Explanation:**

The issue is with Web app 1 (Finance application).

From the WAF logs, we can see that requests to <https://webapp1.comptia.org/FIN/login.html> are being blocked (Rule ID 1006).

The rule is configured to block access to the finance application's login page. This corresponds to the reported issue of the web-based login prompt not loading. To remediate the issue, the WAF configuration for Rule ID 1006 should be changed from "Block" to

"Allow". This will enable the web-based login prompt to load for the client. Additionally, the client app configuration indicates that the client laptop (IP 192.168.10.142) is trying to access the service, and the WAF logs show that requests from this IP are being blocked due to the current rule set. Changing the action for Rule ID 1006 will also ensure that legitimate attempts to access the login page from this IP are not blocked.

Steps for remediation:  
 Go to the WAF configuration.  
 Find Rule ID 1006 for the Finance application 1.  
 Change the action from "Block" to "Allow".  
 Save the changes.

**NEW QUESTION # 78**

A cloud engineer is troubleshooting a connectivity issue. The application server with IP 192.168.1.10 in one subnet is not connecting to the MySQL database server with IP 192.168.2.20 in a different subnet. The cloud engineer reviews the following information:  
 Application Server Stateful Firewall

Inbound rules	Outbound rules
PERMIT ANY 443	PERMIT ANY 443
DENY ANY ANY	PERMIT ANY 3306
	PERMIT ANY 53
	DENY ANY ANY

Destination	Gateway
default	192.168.1.1
192.168.1.0/24	local

Inbound rules	Outbound rules
PERMIT 192.168.1.10/32 3306	DENY ANY ANY
DENY ANY ANY	

Destination	Gateway
192.168.2.0/24	192.168.1.1
192.168.1.0/24	local

Which of the following should the cloud engineer address to fix the communication issue?

- A. The MySQL Server Stateful Firewall
- B. The Application Server Subnet Routing Table
- C. The Application Server Stateful Firewall
- D. The MySQL Server Subnet Routing Table

**Answer: A**

Explanation:

The connectivity issue between the application server and the MySQL database server in different subnets is likely due to the MySQL Server Stateful Firewall's inbound rules. The application server has an IP of 192.168.1.10, but the MySQL server's inbound rules only permit IP 192.168.1.10/32 on port 3306. This rule allows only a single IP address (192.168.1.10) to communicate on port 3306, which is typical for MySQL. However, if the application server's IP is not 192.168.1.10 or the application is trying to communicate on a different port, it would be blocked. To fix the communication issue, the cloud engineer should address the inbound rules on the MySQL Server Stateful Firewall to ensure that the application server's IP address and the required port are allowed. References: Based on the information provided in the question and general networking principles.

**NEW QUESTION # 79**

Users have been reporting that a remotely hosted application is not accessible following a recent migration. However, the cloud administrator is able to access the application from the same site as the users. Which of the following should the administrator update?

- A. Cipher suite
- **B. Routing table**
- C. Permissions
- D. Network ACL

**Answer: B**

Explanation:

Since the cloud administrator can access the application from the same site but users cannot, it suggests a possible issue with the network routing. The routing table may need to be updated to ensure that traffic from the users' location is correctly directed to the new location of the remotely hosted application after the migration.

#### **NEW QUESTION # 80**

A company wants to implement a work environment that will have low operational overhead and highly accessible enterprise resource planning, email, and data resources. Which of the following cloud service models should the company implement?

- A. IaaS
- B. PaaS
- **C. SaaS**
- D. DBaaS

**Answer: C**

Explanation:

A company that requires low operational overhead and highly accessible enterprise resources would benefit from implementing Software as a Service (SaaS). SaaS provides access to applications hosted in the cloud, eliminating the need for internal infrastructure or application development, which aligns with the requirement of having low operational overhead. References: CompTIA Cloud+ Study Guide (Exam CV0-004) by Todd Montgomery and Stephen Olson

#### **NEW QUESTION # 81**

.....

All these three CV0-004 exam question formats contain the real, updated, and error-free CV0-004 exam practice test. These CompTIA CV0-004 exam questions give you an idea about the final CompTIA CV0-004 exam questions formats, exam question structures, and best possible answers, and you will also enhance your exam time management skills. Finally, at the end of CompTIA CV0-004 Exam Practice test you will be ready to pass the final CompTIA CV0-004 exam easily. Best of luck in CompTIA CV0-004 exam and professional career!!!
