We try our best to renovate and update our XK0-006 study materials in order to help you fill the knowledge gap during your learning process, thus increasing your confidence and success rate. At the same time, XK0-006 Preparation baidumps can keep pace with the

digitized world by providing timely application. You will never feel disappointed with our XK0-006 exam quiz.

CompTIA Linux+ Certification Exam Sample Questions (Q55-Q60):

NEW QUESTION # 55

A systems administrator wants to review the amount of time the NetworkManagerservice took to start. Which of the following commands accomplishes this goal?

- A. resolvectl
- **B. systemd-analyze blame**
- C. systemctl daemon-reload
- D. journalctl

Answer: B

Explanation:

The systemd-analyze blame command shows the startup time of each service managed by systemd, allowing the administrator to see how long NetworkManager (or any other service) took to start.

NEW QUESTION # 56

Customers are unable to send emails to a company's domain. When searching the naming service, they receive the following error message:

Which of the following is a valid reason for this error?

- **A. The queried DNS server is not responding.**
- B. The dig command fails because of an extra mx at the end.
- C. The root name servers were configured improperly.
- D. The name entry does not exist.

Answer: A

Explanation:

The error "connection timed out; no servers could be reached" indicates that the specified DNS server (ns1.mydomain.com) did not respond to the query. This points to a DNS server availability or connectivity issue, not a problem with the command syntax or record existence.

NEW QUESTION # 57

A systems administrator needs to write a script that counts the number of times "FAIL" appears in a log file. If "FAIL" appears zero times, then the administrator would like to print the message "SUCCESS." Given the following:

Which of the following should be used before the zero to complete the script?

- A. -ne
- B. -gt
- C. -lt
- **D. -eq**

Answer: D

Explanation:

The test should check if the count of "FAIL" equals zero. The operator -eq is used for numeric equality in shell conditionals, so [\$(grep -c FAIL /var/file.log) -eq 0] correctly evaluates whether the count is zero.

NEW QUESTION # 58

A systems administrator is deploying a web server using the following code:

Which of the following technologies is the administrator using to create this web server?

- A. Puppet
- B. Terraform
- **C. Chef**
- D. Ansible

Answer: C

Explanation:

The code uses Chef's Ruby DSL for defining a role with name, description, run_list, and default_attributes, which are constructs specific to Chef.

NEW QUESTION # 59

A Linux systems administrator needs to extract the contents of a file named /home/dev/web.bkp to the /var/www/html/directory. Which of the following commands should the administrator use?

- A. unzip -c /home/dev/web.bkp /var/www/html/
- **B. pushd /var/www/html/ \$\$ cpio -idv < /home/dev/web.bkp && popd**
- C. tar -c -f /home/dev/web.bkp /var/www/html/
- D. cd /var/www/html/ && gzip -c /home/dev/web.bkp | tar xf -

Answer: B

Explanation:

The .bkp file here is a cpio archive, not a tar or zip. The correct way to extract it is by changing into the target directory (/var/www/html/) and using cpio -idv < /home/dev/web.bkp. The pushd and popd commands ensure the administrator returns to the original directory afterward.

NEW QUESTION # 60

.....

Many customers may be doubtful about our price of our XK0-006 exam questions. The truth is our price is relatively cheap among our peer. The inevitable trend is that knowledge is becoming worthy, and it explains why good XK0-006 resources, services and data worth a good price. We always put our customers in the first place. Thus we offer discounts from time to time, and you can get 50% discount at the second time you buy our XK0-006 question and answers after a year. Lower price with higher quality, that's the reason why you should choose our XK0-006 prep guide.

Cheap XK0-006 Dumps: <https://www.validdumps.top/XK0-006-exam-torrent.html>
