## ITFAS-Level-1 Latest Braindumps Files | ITFAS-Level-1 New APP Simulations

In this social-cultural environment, the ITFAS-Level-1 certificates mean a lot especially for exam candidates like you. To some extent, these certificates may determine your future. With respect to your worries about the ITFAS-Level-1 practice exam, we recommend our ITFAS-Level-1 preparation materials which have a strong bearing on the outcomes dramatically. Our ITFAS-Level-1 Preparation materials are products full of advantages. And our ITFAS-Level-1 exam simulation has quick acquisition. What is more, our ITFAS-Level-1 study guide offers free updates for one year and owns increasing supporters.

## NICET Inspection and Testing of Fire Alarm Systems Level I Exam Sample Questions (Q41-Q46):

### NEW QUESTION # 41

How is a lead-acid battery inspected?

- A. By verifying the charging circuit
- **B. By verifying specific gravity**
- C. By checking for damage
- D. By checking voltage

**Answer: B**

Explanation:

For sealed lead-acid batteries, NFPA 72 specifies that their condition be verified by checking specific gravity, which indicates battery charge status and health.

NFPA 72 (2022), Table 14.4.3.2 - Testing Methods:

Lead-acid batteries shall be tested semiannually by measuring specific gravity.

If batteries are sealed and specific gravity cannot be tested, voltage and visual checks are used instead.

Correct answer: C. By verifying specific gravity

#### **NEW QUESTION # 42**

According to NFPA 72, in addition to the type of equipment, which additional factor should be considered when determining the frequency of cleaning system equipment?

- A. Frequency of periodic testing
- B. Age of the equipment
- C. Number of devices per loop
- **D. Local ambient conditions**

**Answer: D**

Explanation:

The need to clean devices such as detectors is influenced by the environment they are installed in, not just their type or age. Dusty, smoky, or humid environments will require more frequent cleaning.

NFPA 72 (2022), Section 14.4.1.3:

"The frequency of cleaning shall be determined by the manufacturer's instructions and the local ambient conditions." Correct answer:

C. Local ambient conditions

#### **NEW QUESTION # 43**

What is the testing frequency of an engine driven generator?

- A. Semiannually
- B. Annually
- C. Monthly
- **D. Weekly**

**Answer: D**

Explanation:

Testing of engine-driven generators is governed by NFPA 110, not NFPA 72. NFPA 72 references this standard for standby power systems.

NFPA 110 (2022), Section 8.4.1:

"Diesel generator sets shall be exercised at least once weekly."

This includes running the generator under load and verifying automatic start capability.

NFPA 72 (2022), Section 10.6.3.2:

Refers to NFPA 110 for testing of standby/emergency power systems.

Correct answer: A. Weekly

#### **NEW QUESTION # 44**

What is the maximum extended interval allowed for equipment to get inspected?

- **A. 12 months**
- B. 6 months

- C. 18 months
- D. 3 months

**Answer: A**

Explanation:

Inspection intervals are detailed in NFPA 72, Table 14.3.1, which outlines the maximum intervals for various components. Most fire alarm system components require inspection at least annually, which equals 12 months.

NFPA 72 (2022), Table 14.3.1 - Frequency of Inspection Tasks:

You'll see that the default maximum inspection interval for initiating devices, control equipment, and notification appliances is 12 months.

Unless specifically stated otherwise (e.g., by manufacturer instructions or performance-based design), you cannot exceed that.

Correct answer: C. 12 months

#### NEW QUESTION # 45

According to NFPA 72, manual fire alarm boxes shall be located within which distance of each exit doorway on each floor?

- A. 33 feet (10.0 meters)
- **B. 5 feet (1.5 meters)**
- C. 6 feet (2.0 meters)
- D. 16 feet (5.0 meters)

**Answer: B**

Explanation:

Manual fire alarm boxes (pull stations) are required to be easily accessible near exits so that occupants can quickly initiate an alarm when leaving the area. The specific distance requirement is found in:

NFPA 72 (2022), Section 17.14.6.3:

"Manual fire alarm boxes shall be located within 5 ft (1.5 m) of each exit doorway on each floor." So the correct distance is 5 feet, not 33 feet. That makes the correct answer:

Correct answer: A. 5 feet (1.5 meters)

#### NEW QUESTION # 46

.....

A free demo of ITFAS-Level-1 practice test questions and up to 1 year of free updates are also available at NewPassLeader. So, this is the time to download valid NICET ITFAS-Level-1 exam questions and start studying. There is no room for delays in Inspection and Testing of Fire Alarm Systems Level I Exam (ITFAS-Level-1) preparation exams or second thoughts when you know that you have to survive the competition and safeguard your job.
