

Valid Cisco 350-701 Exam Tips - Reliable 350-701 Exam Question

P.S. Free 2026 Cisco 350-701 dumps are available on Google Drive shared by Pass4guide: <https://drive.google.com/open?id=12REllzpfK8hfg6oDQgS6-aWytZ5vOFR->

Many companies' executives have a job content that purchasing 350-701 valid exam collection PDF help their engineers to pass exam and obtain a useful certificate. It is not only improving the qualification of engineers personal but also showing the qualification of companies. If they choose right 350-701 valid exam collection PDF they will save a lot of exam cost and dumps fee for companies. Our products will be excellent choice with high passing rate.

Understanding functional and technical aspects of Implementing and Operating Cisco Security Core Technologies (SCOR 350-701) Security Concepts

The following will be discussed in **CISCO 350-701 exam dumps**:

- Describe security intelligence authoring, sharing, and consumption
- On-premises: viruses, trojans, DoS/DDoS attacks, phishing, rootkits, man-in-the-middle attacks, SQL injection, cross-site scripting, malware
- Explain the role of the endpoint in protecting humans from phishing and social engineering attacks
- Cloud: data breaches, insecure APIs, DoS/DDoS, compromised credentials
- Explain common threats against on-premises and cloud environments
- Compare site-to-site VPN and remote access VPN deployment types such as sVTI, IPsec, Cryptomap, DMVPN, FLEXVPN including high availability considerations, and AnyConnect
- Explain North Bound and South Bound APIs in the SDN architecture
- Compare common security vulnerabilities such as software bugs, weak and/or hardcoded passwords, SQL injection, missing encryption, buffer overflow, path traversal, cross-site scripting/forgery
- Describe functions of the cryptography components such as hashing, encryption, PKI, SSL, IPsec, NAT-T IPv4 for IPsec, pre-shared key and certificate based authorization

Cisco 350-701 Exam is a certification exam that validates the skills and knowledge of IT professionals in implementing and operating Cisco Security Core Technologies. 350-701 exam is designed for individuals who are responsible for the security of Cisco networks, devices, and applications. Implementing and Operating Cisco Security Core Technologies certification is part of the Cisco Certified Network Professional (CCNP) Security track and is a prerequisite for the Cisco Certified Internetwork Expert (CCIE) Security certification.

Pass4guide Cisco 350-701 exam practice questions and answers

Do you feel headache looking at so many IT certification exams and so many exam materials? What should you do? Which materials

do you choose? If you don't know how to choose, I choose your best exam materials for you. You can choose to attend Cisco 350-701 exam which is the most popular in recent. Getting 350-701 certificate, you will get great benefits. Moreover, to effectively prepare for the exam, you can select Pass4guide Cisco 350-701 certification training dumps which are the best way to pass the test.

Cisco 350-701 Exam covers a wide range of topics related to network security. 350-701 exam tests the candidates' knowledge of security technologies such as Cisco Identity Services Engine (ISE), Cisco Advanced Malware Protection (AMP), Cisco Firepower Next-Generation Firewall (NGFW), and Cisco Umbrella. It also evaluates the candidates' understanding of security policies, procedures, and best practices, and their ability to implement and manage security solutions.

Cisco Implementing and Operating Cisco Security Core Technologies Sample Questions (Q361-Q366):

NEW QUESTION # 361

Refer to the exhibit.

```
interface GigabitEthernet1/0/18
switchport access vlan 41
switchport mode access
switchport voice vlan 44
device-tracking attach-policy IPDT_MAX_10
authentication periodic
authentication timer reauthenticate server
access-session host-mode multi-domain
access-session port-control auto
dot1x pae authenticator
dot1x timeout tx-period 7
dot1x max-reauth-req 3
spanning-tree portfast
```

Refer to the exhibit. A Cisco ISE administrator adds a new switch to an 802.1X deployment and has difficulty with some endpoints gaining access.

Most PCs and IP phones can connect and authenticate using their machine certificate credentials. However printer and video cameras cannot base d on the interface configuration provided, what must be to get these devices on to the network using Cisco ISE for authentication and authorization while maintaining security controls?

- A. Enable insecure protocols within Cisco ISE in the allowed protocols configuration.
- B. Change the default policy in Cisco ISE to allow all devices not using machine authentication .
- C. Configure authentication event fail retry 2 action authorize vlan 41 on the interface
- **D. Add mab to the interface configuration.**

Answer: D

Explanation:

the interface configuration. MAB stands for MAC Authentication Bypass, which is a feature that allows devices that do not support 802.1X, such as printers and video cameras, to bypass the authentication process and gain network access based on their MAC addresses¹. By adding mab to the interface configuration, the Cisco ISE administrator can enable MAB as a fallback method after 802.1X fails or times out. This way, the devices that support 802.1X can use their machine certificate credentials, while the devices that do not support

802.1X can use their MAC addresses to authenticate with Cisco ISE². The other options are not correct because they either compromise the security controls or do not address the problem. Changing the default policy in Cisco ISE to allow all devices not using machine authentication would weaken the security posture and expose the network to unauthorized access. Enabling insecure protocols within Cisco ISE in the allowed protocols configuration would also reduce the security level and increase the risk of attacks. Configuring authentication event fail retry 2 action authorize vlan 41 on the interface would only apply to the devices that fail authentication twice, and would not solve the issue for the devices that do not support 802.1X at all³. NEW QUESTION # 362

What is managed by Cisco Security Manager?

- A. access point
- **B. ASA**
- C. ESA
- D. WSA

Answer: B

Explanation:

Cisco Security Manager provides a comprehensive management solution for:

- Cisco ASA 5500 Series Adaptive Security Appliances
- Cisco intrusion prevention systems 4200 and 4500 Series Sensors
- Cisco AnyConnect Secure Mobility Client

Cisco Security Manager provides a comprehensive management solution for:

- Cisco ASA 5500 Series Adaptive Security Appliances
- Cisco intrusion prevention systems 4200 and 4500 Series Sensors
- Cisco AnyConnect Secure Mobility Client

Cisco Security Manager provides a comprehensive management solution for:

- Cisco ASA 5500 Series Adaptive Security Appliances
- Cisco intrusion prevention systems 4200 and 4500 Series Sensors
- Cisco AnyConnect Secure Mobility Client

NEW QUESTION # 363

What is a feature of Cisco NetFlow Secure Event Logging for Cisco ASAs?

- **A. Multiple NetFlow collectors are supported.**
- B. Flow-create events are delayed.
- C. Advanced NetFlow v9 templates and legacy v5 formatting are supported.
- D. Secure NetFlow connections are optimized for Cisco Prime Infrastructure

Answer: A

Explanation:

Explanation

Each NSEL data record has the event time field (NF_F_EVENT_TIME_MSEC), which is the time that the event occurred in milliseconds. The NetFlow packet may consist of multiple events, however, the time that the packet is sent does not represent the time that the event occurred, because the NetFlow service waits for multiple events to pack the NetFlow packet.

NEW QUESTION # 364

Which group within Cisco writes and publishes a weekly newsletter to help cybersecurity professionals remain aware of the ongoing and most prevalent threats?

- **A. Talos**
- B. CSIRT
- C. PSIRT
- D. DEVNET

Answer: A

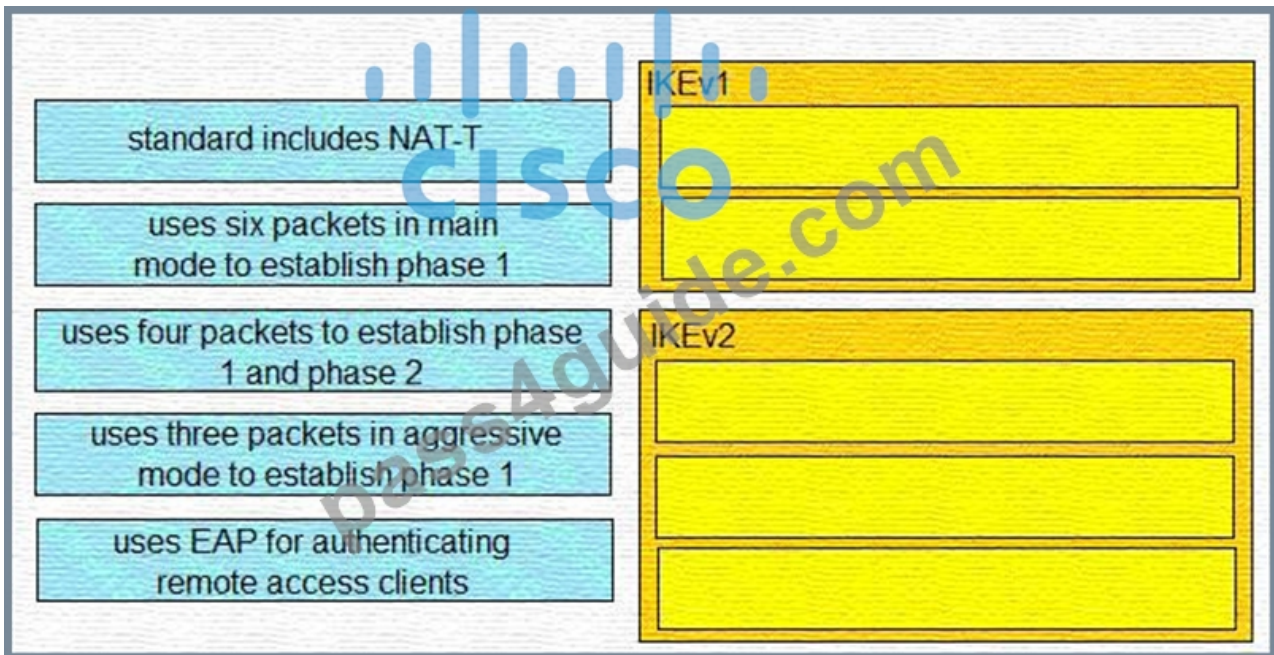

Explanation:

NEW QUESTION # 365

Drag and drop the descriptions from the left onto the correct protocol versions on the right.

Answer:

Explanation:

Explanation:

Graphical user interface Description automatically generated with low confidence

IKEv1
uses six packets in main mode to establish phase 1
uses three packets in aggressive mode to establish phase 1
IKEv2
standard includes NAT-T
uses four packets to establish phase 1 and phase 2
uses EAP for authenticating remote access clients

NEW QUESTION # 366
