SAP C_ACDET_2506 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> • Deploy and Migration: This part of the exam assesses the expertise of an SAP Deployment Specialist and focuses on the final deployment of the configured solution and the data migration process. Candidates should demonstrate a solid grasp of how to move configurations from a testing environment into production while minimizing disruption. It also includes knowledge of tools and strategies used for data extraction.
Topic 2	<ul style="list-style-type: none"> • Field Configuration: This domain evaluates the knowledge of an SAP Deployment Specialist and focuses on customizing and configuring business fields in the SAP system according to client-specific needs. This includes adjusting system settings for master data, transaction data, and other essential field-level controls to support business processes effectively. The section tests the candidate's ability to use configuration tools, apply SAP standard templates, and ensure that the field configurations align with the desired operational workflows of the business. It also touches upon validation, testing, and documenting the configuration changes made during the implementation.
Topic 3	<ul style="list-style-type: none"> • Project Overview, Roles and Responsibilities: This section of the exam measures the skills of an SAP Cloud Consultant and covers the fundamental understanding of SAP Activate methodology within the context of a cloud implementation project. Candidates are expected to be familiar with the project lifecycle, including phases such as Prepare, Explore, Realize, Deploy, and Run. This part also focuses on identifying key roles and responsibilities within a cloud project team, ensuring clarity in collaboration between consultants, clients, and SAP. It checks whether the consultant understands governance, stakeholder management, and the high-level structure of cloud deployment using SAP best practices.

SAP Certified Associate - Configuring SAP Ariba Strategic Sourcing Suite Sample Questions (Q36-Q41):

NEW QUESTION # 36

Who leads Suite Integration activities?

- A. SAP Support
- B. Partner/Customer Functional Lead
- C. Customer Success Manager
- **D. SAP Deployment Lead**

Answer: D

Explanation:

The SAP Deployment Lead is responsible for leading Suite Integration activities across SAP Ariba solutions.

This role acts as the primary coordinator and facilitator for integration efforts, ensuring smooth data flow, process alignment, and technical synchronization between sourcing, procurement, contracts, and other modules in the Ariba suite. The Deployment Lead works closely with the customer's functional teams, partners, and technical specialists to manage integration scope, timelines, and troubleshooting.

SAP Support typically provides post-go-live assistance but does not lead integration planning. Functional leads focus on configuration and business processes but lack overarching integration responsibility. Customer Success Managers focus on adoption and satisfaction rather than technical integration.

Therefore, the Deployment Lead role is critical for coordinating complex multi-solution projects and ensuring a unified suite experience.

NEW QUESTION # 37

What are the key characteristics of a Bluefield deployment scenario? Note: There are 2 correct answers to this question.

- A. The Test site has been configured using the SAP Bluefield template
- B. Many team members have a naive perception of deploying software solutions
- **C. The customer already has an SAP Ariba Strategic Sourcing suite solution deployed**
- **D. The Production site may have live transactions**

Answer: C,D

NEW QUESTION # 38

Which of the following accurately describes the migration of flex master data templates using the migration tool?

- A. The templates are migrated by the tool, but the data must be loaded manually later.
- B. Only the data of the flex master data templates is migrated; templates must be created manually.
- C. Both the templates and their data are fully migrated by the tool.
- D. Neither the templates nor the data is migrated using the tool

Answer: A

NEW QUESTION # 39

What is the key role of the SAP Deployment Lead assigned to the project?

- A. To advise the customer and partner in solution configurations
- B. To test and validate the solution prior to go-live
- C. To act as the liaison between the customer and SAP Support in resolving technical issues and manage customer escalations
- D. To perform configuration changes required to the SAP Ariba Strategic Sourcing suite solutions

Answer: C

Explanation:

The SAP Deployment Lead acts as the primary liaison between the customer and SAP Support, managing technical issues, escalations, and coordination during the deployment lifecycle. They oversee environment readiness, migration activities, and issue resolution. Advising on configurations is typically the Functional Lead's role, configuration changes are done by consultants, and testing is led by the customer or testing teams. The Deployment Lead focuses on technical project management and communication.

NEW QUESTION # 40

During which SAP Activate Methodology phase do you define the customer requirements?

- A. Discover
- B. Explore
- C. Define
- D. Design

Answer: B

Explanation:

SAP Activate's Explore phase is focused on refining and validating customer requirements through fit-to-standard workshops. During this phase, project teams analyze SAP best practice processes alongside customer business needs, identifying configuration gaps and defining functional requirements.

Design as a distinct phase has been replaced by the more agile Explore phase, focusing on solution validation.

The Discover phase focuses on solution evaluation and strategy alignment, not detailed requirements gathering. The term "Define" is not part of SAP Activate methodology.

Proper requirements definition during Explore ensures that the configurations built in Realize align with business needs, reducing rework and enhancing solution adoption. This methodology reflects SAP's emphasis on agile and iterative project delivery within cloud and hybrid deployments.
