

# WGU Web-Development-Applications Reliable Exam Question & Web-Development-Applications Best Study Material

**WGU C777 Final Exam (New 2024/ 2025 Update) Web Development Applications | Review with Qs & As | 100% Correct| Grade A (Verified Answers)**

**QUESTION**  
client side form validation vs server side

**Answer:**  
its a good practice to implement both. On the client side it helps to make the form more user friendly and faster, since a typo can be detected prior the form submission

**QUESTION**  
built in form validation pros/cons

**Answer:**  
uses html form validation. best performance but less configuration  
remember this

**QUESTION**  
javaScript form validation pros/cons

**Answer:**  
slower than built in but more customizable  
remember this

And as long as you try our Web-Development-Applications practice questions, you will love it!

## WGU Web Development Applications Sample Questions (Q94-Q99):

### NEW QUESTION # 94

A JavaScript programmer defines the following function:

What is the name of the function?

- A. Number
- B. Function
- C. square
- D. Return

**Answer: C**

Explanation:

In JavaScript, the name of a function is defined after the function keyword and before the parentheses that enclose its parameters.

\* Function Name: The function name is the identifier used to call the function. It is defined immediately after the function keyword.

\* Usage Example:

```
function square(number) {  
  return number * number;  
}
```

In this example, the name of the function is square.

### NEW QUESTION # 95

What is the default behavior of overlay elements?

- A. Last element listed appears on top
- B. First element listed is invisible
- C. First element listed is transparent
- D. Last element listed appears on bottom

**Answer: A**

Explanation:

In CSS, when elements overlap, the default behavior is that the last element listed in the HTML document appears on top.

\* Stacking Context:

\* Default Behavior: Elements are stacked in the order they appear in the HTML. The last element in the document tree is rendered on top.

\* z-index: You can control stacking order using the z-index property, but without it, the default order applies.

\* Example:

\* Given HTML:

```
<div style="position: absolute; width: 100px; height: 100px; background-color: red;"></div>
```

```
<div style="position: absolute; width: 100px; height: 100px; background-color: blue;"></div>
```

\* The blue div will be on top of the red div because it appears later in the HTML document.

\* W3C CSS Positioned Layout Module Level 3

By understanding these fundamental CSS concepts, developers can create more effective and visually appealing web layouts.

### NEW QUESTION # 96

Which element attaches an external CSS document to a web page?

- A. <Script>
- B. <style>
- C. <Meta>
- D. <Link>

**Answer: D**

Explanation:

To attach an external CSS document to a web page, the<link>element is used within the<head>section of the HTML document.

\* <link> Element:

\* Purpose: Links external resources, such as stylesheets, to the HTML document.

\* Attributes:

\* rel="stylesheet": Specifies the relationship between the current document and the linked resource.

\* href="path/to/stylesheet.css": Specifies the URL of the external stylesheet.

\* Example:

```
<head>
<link rel="stylesheet" href="styles.css">
</head>
```

\* Other Options:

\* <style>: Used to embed internal CSS directly within the HTML document, not for linking external CSS.

\* <script>: Used to embed or link to JavaScript files.

\* <meta>: Provides metadata about the HTML document, not for linking stylesheets.

W3C HTML5 Specification - Thelinkelement

MDN Web Docs -<link>

By using the<link>element correctly, you can ensure that your web page is styled with external CSS, maintaining a separation of concerns and making your HTML more manageable.

### NEW QUESTION # 97

What is the default behavior of overlay elements?

- A. Last element listed appears on top
- B. First element listed is invisible
- C. First element listed is transparent
- D. Last element listed appears on bottom

**Answer: A**

Explanation:

In CSS, when elements overlap, the default behavior is that the last element listed in the HTML document appears on top.

\* Stacking Context:

\* Default Behavior: Elements are stacked in the order they appear in the HTML. The last element in the document tree is rendered on top.

\* z-index: You can control stacking order using thez-indexproperty, but without it, the default order applies.

\* Example:

\* Given HTML:

```
<div style="position: absolute; width: 100px; height: 100px; background-color: red;"></div>
<div style="position: absolute; width: 100px; height: 100px; background-color: blue;"></div>
```

\* The bluedivwill be on top of the reddivbecause it appears later in the HTML document.

W3C CSS Positioned Layout Module Level 3

By understanding these fundamental CSS concepts, developers can create more effective and visually appealing web layouts.

## NEW QUESTION # 98

Given the following HTML code:

```
<p>
  <a href="http://example.com/link0" >Link 0</a>
  <a href="http://example.com/link1" >Link 1</a>
</p>
  <ul>
    <li>
      Hello
    </li>
  </ul>
  <a href="http://example.com/link2">Link 2.</a>
  <a href="https://example.com/link3">Link 3.</a>
</p>
<b>Sample</b>
```

And given the following CSS selector:

Which elements will the CSS be applied to?

- A. Any anchors (a. element) preceded by unordered lists (ul element)  
All anchors (a. element) and elements inside unordered lists (ul element)
- B. All anchors (a element) and elements preceded by an unordered list (ul element)
- C. Any anchors (a element) followed by unordered lists (ul element)

**Answer: C**

Explanation:

Given the CSS selector, `a, ul`, it targets all anchor (`<a>`) elements and all unordered list (`<ul>`) elements independently. This means the CSS rule will be applied to each `<a>` and `<ul>` element in the HTML document.

\* CSS Selector Analysis:

\* `a`: This part of the selector targets all `<a>` elements in the document.

\* `,`: The comma is a selector separator, meaning that each part of the selector list is applied independently.

\* `ul`: This part of the selector targets all `<ul>` elements in the document.

\* Example:

\* Given HTML:

```
<p>
<a
href="http://example.com/link0"
>Link 0</a>
<a
href="http://example.com/link1"
>Link 1</a>
</p>
<ul>
<li>Hello</li>
</ul>
<p>
<a
href="http://example.com/link2"
>Link 2</a>
<a href="https://example.com/link3">Link 3</a>
</p>
<b>Sample</b>
```

\* Given CSS:

```
a, ul {
color: red;
}
```

\* Affected Elements: All `<a>` and `<ul>` elements will have the color set to red.
