Secondly, the price of our CAD learning guide is quite favourable than the other websites'.

The CAD exam is an advanced-level exam that covers various development concepts and techniques, including ServiceNow architecture, data model, user interface, scripting, and integrations. CAD Exam is designed to test the developer's ability to design, configure, and implement complex ServiceNow applications that meet business requirements.

ServiceNow Certified Application Developer-ServiceNow Sample Questions (Q104-Q109):

NEW QUESTION # 104
There is a basic strategy when creating a Utils Script Include. Identify the step that does not belong.

- A. Script the function(s)
- B. Create a class
- C. Create a prototype object from the new class
- D. Identify the table

Answer: D

NEW QUESTION # 105

Which tab on the knowledge base record, would you use to identify the sets of users who are able to read articles in that knowledge base?

- A. Can Access
- B. Accessible to
- C. Can Read
- D. Access List

Answer: C

NEW QUESTION # 106

Which Application Access configuration field(s) are NOT available if the Can read configuration field is NOT selected?

- A. Can create, Can update, and Can delete
- B. All access to this table via web services
- C. Can read does not affect the availability of other Application Access fields
- D. Allow configuration

Answer: A

Explanation:
"You must first select read access to grant any other API record operation." https://docs.servicenow.com/bundle/tokyo-application-development/page/build/applications/reference/r_TableApplicationAccessFields.html The Application Access configuration fields control the access level for an application and its tables. The following Application Access configuration fields are not available if the Can read configuration field is not selected:
Can create. This field determines whether users can create records on the application tables.
Can update. This field determines whether users can update records on the application tables.
Can delete. This field determines whether users can delete records on the application tables.
These fields are not available because they depend on the Can read field, which determines whether users can view records on the application tables. If users cannot read records, they cannot create, update, or delete them either.
The following Application Access configuration fields are available regardless of the Can read configuration field:
All access to this table via web services. This field determines whether users can access the application tables using web services, such as REST or SOAP.
Allow configuration. This field determines whether users can configure the application tables, such as adding or modifying fields, views, or indexes. References: Application Access, Certified Application Developer (CAD) Learning Path

NEW QUESTION # 107

What is the Event Registry?

- A. The method used in server side scripts to generate Events and pass parameters
- B. A Workflow which is launched every time an Event is generated; used to debug Events
- C. The Event Log which lists all Events that have been generated
- D. A table containing a record for every Event known to the ServiceNow system which allows ServiceNow to react when Events are generated

Answer: D

Explanation:
The Event Registry is a table that stores the definitions of all the Events that can be triggered or processed by the ServiceNow system1. The Event Registry allows ServiceNow to react when Events are generated by executing actions such as sending notifications, running scripts, or starting workflows2. The Event Registry also provides information about the Event parameters, description, and source3.
Reference = 1: Event Registry - ServiceNow Docs 2: Event Management - ServiceNow Docs 3: Event Registry form - ServiceNow Docs

NEW QUESTION # 108

How must Application Access be configured to prevent all other private application scopes from creating configuration records on

an application's data tables?

- A. You must create Access Controls to prevent all other application scopes from creating configuration records on an application's data tables rather than using Application Access
- B. Set the Accessible from field value to This application scope only
- C. Set the Accessible from field value to This application scope only and de-select the Allow access to this table via web services option
- D. Set the Accessible from field value to All application scopes and de-select the Can create option

Answer: A
