NEW QUESTION # 71

If you want to evaluate catalog menu entries and authorization default values of IWSG and IWSV applications, which SUIM reports would you use? Note: There are 2 correct answers to this question.

* A. By Authorization Object
* B. By Transaction Assignment in Menu
* C. Search Startable Applications in Roles
* D. Search Applications in Roles

Answer: A,C

Explanation:
To evaluate catalog menu entries and authorization default values for IWSG (SAP Gateway Service Groups Metadata) and IWSV (SAP Gateway Business Suite Enablement-Service) applications, the SUIM (System User Information System) reports "Search Startable Applications in Roles" and "By Authorization Object" are used. The "Search Startable Applications in Roles" report identifies roles that include startable applications, such as IWSG and IWSV, by analyzing menu entries in PFCG roles, providing insight into which applications users can access. The "By Authorization Object" report allows administrators to review authorization objects, including those associated with IWSG and IWSV, and their default values, ensuring that the correct permissions are assigned. These reports are critical for auditing and maintaining secure access to SAP Fiori and Gateway applications. The "Search Applications in Roles" report is less specific, and "By Transaction Assignment in Menu" focuses on transaction codes, not IWSG/IWSV applications, making them unsuitable for this purpose. These tools enhance transparency and control over application access in SAP systems.

* Using language-independent names ensures that roles are easily identifiable and maintainable regardless of the system's logon language.
