ISTQB CTAL-TM-001 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> Managing the Test Activities: This section of the exam measures the skills of a Test Manager and covers the end-to-end coordination of testing work. Candidates must demonstrate how to plan testing—defining objectives, scope, resources, schedule, and risk treatments—then how to monitor progress against those plans, control deviations through corrective actions, and conclude testing with completion reports, archival of testware, and lessons-learned sessions. The syllabus also explores tailoring test activities to project context, applying risk-based testing to focus effort where it matters most, shaping a coherent project test strategy, leading process-improvement initiatives, and selecting and managing test tools throughout their lifecycle.
Topic 2	<ul style="list-style-type: none"> Managing the Team: This section of the exam measures the skills of a Test Lead and addresses the human side of test management. Candidates must demonstrate how to identify the skills required for each project, assess and develop team competence, and apply motivating leadership practices. The syllabus also covers stakeholder relationship management, understanding interests and influence, articulating the business case for testing, and balancing cost-of-quality considerations to ensure testing is properly resourced, communicated, and valued within the wider project.

Topic 3	<ul style="list-style-type: none"> • Managing the Product: This section of the exam measures the skills of a Test Analyst and focuses on the artefacts under test and the metrics that describe them. Examinees show how to define and collect test metrics to monitor quality and progress, estimate effort and resources for different test scopes, and organize defect management workflows that fit sequential, iterative, or hybrid lifecycles. The aim is to ensure test outcomes align with objectives and inform stakeholders through clear reporting, while using estimation techniques and defect data to guide ongoing test and process improvements.

How to Prepare For CTAL-TM Certification Exam

Preparation Guide for CTAL-TM Certification Exam

Introduction to CTAL-TM Exam

Certified Tester Advanced Level Test Manager(CTAL-TM), This is a rigorous professional certification program based on exams. The CTAL-TM certification is offered to candidates who pass the Tester Advanced Level Test Manager(CTAL-TM) of the International Board of Software Testing Qualifications (ISTQB).

This ISTQB course is intended for testing professionals who want to excel in a management or lead role. In this course, students will learn how to administer a testing project and execute a risk-based technique for testing. Students will also be examining how a technique correlates with test estimation, monitoring, and planning. During this course, students will learn how to send report to stakeholders, build successful test teams and implement significant test plans

The creation of the ISTQB exams is the responsibility of the councils of each member country so that they better reflect the language, use and specific conditions of the country. Unlike other English-based ISTQB exams that you can find, ASTQB exams are created as original exams for English speakers, not translated from another language. US employers recognize this and have expressed their preference for evaluators who have passed the ASTQB ISTQB exams.

Our world-renowned subject matter experts have worked very hard to create the ASTQB versions of the ISTQB exams and we believe that our exams are of the highest quality, without difficult questions. This gives you a better exam experience.

ISTQB Test Manager certification takes aspirants career to the next level. This certification adds a great value to candidates skills and demonstrates their commitment to the testing profession and lead others as a manager in the organization. Certified professionals are recognized as an expert in software testing, quality, and project management.

Under your guidance, the team profile is raised as more effective and efficient in testing by practicing methods and techniques included in the Test Manager Certification series.

An Advanced Test Manager would be able to :

ISTQB Certified Tester Advanced Level - Test Manager Sample Questions (Q166-Q171):

NEW QUESTION # 166

Your team has been working on an Agile project for two months. There is a retrospective at the end of each sprint. One of the data items reviewed is how many defects are being caught by users rather than by testers.

The test team is being blamed for these escapes.

What do you need to do to make these sessions more productive?

- A. You should help the team brainstorm ideas on how to improve the testing to eliminate the escapes
- B. You should do root cause analysis to prove the developers are responsible
- C. You should gather metrics to present to the team regarding all the hours spent testing
- D. You should attend the retrospective instead of the individual testers

Answer: A

Explanation:

* Understanding the Agile Context:

* Retrospectives aim to identify and implement process improvements collaboratively.

* Focusing on solutions, not blame, aligns with Agile principles.

* Evaluation of Options:

* A. You should attend the retrospective instead of the individual testers:

* Incorrect. Retrospectives are team-wide events; excluding testers undermines collaboration.

* B. You should do root cause analysis to prove the developers are responsible:

* Incorrect. Assigning blame contradicts Agile's collaborative ethos.

* C. You should gather metrics to present to the team regarding all the hours spent testing:

* Incorrect. Metrics may provide insights but are insufficient to address process improvement.

* D. You should help the team brainstorm ideas on how to improve the testing to eliminate the escapes:

* Correct. Encouraging collaborative problem-solving directly addresses the root causes of defects escaping to users.

* Syllabus Alignment:

* ISTQB highlights retrospectives as opportunities for continuous improvement in Agile projects (TM-1.2.4).

NEW QUESTION # 167

Select THREE issues from the options provided that should at least be raised. 1 credit

- A. Do we have a set of tool requirements to validate the tool against?
- B. What are the problems we are trying to address?
- C. How will the implementation be organized?
- D. Has there been sufficient comparison of tools?
- E. Is customized training available?
- F. How will the change process be managed?
- G. Which project will be selected to perform the tool pilot?

Answer: A,B,D

NEW QUESTION # 168

Which of the following is a benefit of independent testing? 1 credit

- A. Developers do not have to take as much responsibility for quality.
- B. Code cannot be released into production until independent testing is complete.
- C. Testing is isolated from development.
- **D. Independent testers find different defects and are unbiased.**

Answer: D

NEW QUESTION # 169

Your organisation, a high-street bank, is to embark on a project that delivers a major update to the design of its website and also involves functional and performance improvement changes to its backend core banking engine. It has traditionally used the V-model software development lifecycle to deliver its projects but has now decided to start migrating to Agile (SCRUM). However, after considering the organisation's current processes and skills plus the importance of the project, senior management has decided to continue to use the V-model approach for the backend core banking engine changes. For the same reasons, they have decided to implement a hybrid model for the website updates. The website updates will begin with a traditional requirement definition phase and will then transition to an Agile (SCRUM) approach for development and testing. The organisation's test policy mandates that all tests must be fully traceable to business requirements to satisfy the regular audits that take place in the banking sector. Which TWO test management activities would be MOST appropriate for the new project?

- A. Avoid distinct test phases and ensure testing is continuous and integrated across the whole project
- B. Select tools for test automation and continuous integration for the website changes
- **C. Ask the business to identify and analyse all product risks, then ensure testing contributes to risk mitigation strategies**
- D. Plan exploratory testing on all of the new website features but use formal scripting for the banking engine
- **E. Ensure there is a continual review of test progress with regular test monitoring and reporting across the whole project**

Answer: C,E

Explanation:

This hybrid approach necessitates risk-based test planning and continuous monitoring, especially with traceability required for audits. "One of the key responsibilities of the Test Manager is to ensure test activities support risk mitigation and ensure regular monitoring aligned to regulatory compliance." (Source: ISTQB Advanced Level Test Manager Syllabus 2012, Sections 1.5, 2.3.1 and 5.2) Thus, A and C best align with the test management goals for this hybrid project.

NEW QUESTION # 170

Which of the following statements is true regarding documentation standards? [2]

- **A. Documentation standards can vary depending on the test level.**
- B. Documentation standards are determined by the Project Manager.
- C. Documentation standards are a lower priority than testing standards.
- D. Agile projects consistently use level test plans and documentation standards.

Answer: A

Explanation:

Documentation standards are not uniform across all test levels; they can differ based on the specific requirements of each level. For instance, unit testing may have different documentation needs compared to system testing. The ISTQB documentation standards recognize this variability and allow for flexibility to suit the context of the test level. This ensures that the documentation is appropriate for the objectives and constraints of each test level, providing clarity and efficiency in the testing process.
