Marvelous New JN0-336 Exam Format | Amazing Pass Rate For JN0-336: Security, Specialist (JNCIS-SEC) | Fantastic Exam Sample JN0-336 Questions

In the process of using the JN0-336 study training materials, once users have any questions about our study materials, the user can directly by E-mail us, our products have a dedicated customer service staff to answer for the user, they are 24 hours service for you, we are very welcome to contact us by E-mail and put forward valuable opinion for us. Our JN0-336 Latest Questions already have three different kinds of learning materials, what is the most suitable JN0-336 test guide for you? You can just follow the instructions for JN0-336 study guide on the web or ask our services about it.

Juniper Security, Specialist (JNCIS-SEC) Sample Questions (Q94-Q99):

NEW QUESTION # 94

You administer a JSA host and want to include a rule that sets a threshold for excessive firewall denies and sends an SNMP trap after receiving related syslog messages from an SRX Series firewall.

Which JSA rule type satisfies this requirement?

- A. flow
- **B. offense**
- C. common
- D. event

Answer: B

Explanation:

An offense rule in JSA is designed to aggregate multiple events or log entries based on specified criteria into a single offense, which can then trigger responses such as notifications or actions like sending an SNMP trap. This type of rule is well-suited for scenarios where you need to monitor for patterns or rates of events, such as excessive firewall denies, and take action when these exceed defined thresholds.

Offense rules can analyze both event and flow data, making them highly versatile for comprehensive security monitoring.

NEW QUESTION # 95

Exhibit

Referring to the exhibit, which two statements describe the type of proxy used? (Choose two.)

- **A. reverse proxy**
- B. server protection proxy
- C. client protection proxy
- **D. forward proxy**

Answer: A,D

Explanation:

In the exhibit, the SRX Firewall could be acting as a forward proxy, managing outbound internet requests from internal users or clients within a private network to the internet. Forward proxies are commonly used to control and monitor outbound traffic, provide content caching to improve load times, and enforce company policies.

The scenario can also imply a reverse proxy setup where the SRX Firewall might be configured to direct incoming requests from the internet to the web application. Reverse proxies are used to balance load, enhance security, manage SSL encryption, and provide additional caching functionalities for inbound traffic to servers.

NEW QUESTION # 96

Which two types of SSL proxy are available on SRX Series devices? (Choose two.)

- **A. client-protection**
- B. DNS proxy
- C. Web proxy
- **D. server-protection**

Answer: A,D

Explanation:

Based on SSL proxy is a feature that allows SRX Series devices to decrypt and inspect SSL/TLS traffic for security purposes.

According to SRX Series devices support two types of SSL proxy:

Client-protection SSL proxy also known as forward proxy - The SRX Series device resides between the internal client and outside server. It decrypts and inspects traffic from internal users to the web.

Server-protection SSL proxy also known as reverse proxy - The SRX Series device resides between outside clients and internal servers. It decrypts and inspects traffic from web users to internal servers.

NEW QUESTION # 97

Regarding static attack object groups, which two statements are true? (Choose two.)

- A. Group membership automatically changes when Juniper updates the IPS signature database.
- B. You must manually add matching attack objects to a custom group.
- C. Group membership does not automatically change when Juniper updates the IPS signature database.
- D. Matching attack objects are automatically added to a custom group.

Answer: B,C

NEW QUESTION # 98

Which two statements about the DNS ALG are correct? (Choose two.)

- A. The DNS ALG performs DNS doctoring
- B. The DNS ALG supports VPN tunnels.
- C. The DNS ALG supports DDNS.
- D. The DNS ALG does not support NAT.

Answer: A,B

Explanation:

The DNS Application Layer Gateway (ALG) is designed to manage and facilitate the successful passage of DNS traffic through a network device such as a firewall or NAT. Here are the correct statements regarding DNS ALG:

The DNS ALG performs DNS doctoring.

DNS doctoring is indeed a function of the DNS ALG where it modifies the payload of DNS responses to ensure that the information is aligned with the NAT policy. For example, it can rewrite the IP addresses in DNS responses to match the internal or external NAT'd IP address that the client should use.

The DNS ALG supports VPN tunnels.

DNS ALG can function across VPN tunnels by managing DNS traffic that traverses the tunnel, ensuring that the DNS queries and responses are correctly handled in environments where IP address translation occurs due to the VPN.

NEW QUESTION # 99

.....

We stress the primacy of customers' interests, and make all the preoccupation based on your needs. We assume all the responsibilities our practice materials may bring. They are a bunch of courteous staff waiting for offering help 24/7. You can definitely contact them when getting any questions related with our JN0-336 practice materials. If you haplessly fail the exam, we treat it as our blame then give back full refund and get other version of practice material for free.
