Several advantages we now offer for your reference. On the one hand, our PDII learning questions engage our working staff in understanding customers' diverse and evolving expectations and incorporate that understanding into our strategies, thus you can 100% trust our PDII Exam Engine. On the other hand, the professional PDII study materials determine the high pass rate. According to the research statistics, we can confidently tell that 99% candidates after using our products have passed the PDII exam.

Salesforce PDII (Salesforce Certified Platform Developer II) Exam is a certification that is designed for developers who want to showcase their expertise in Salesforce development. Platform Developer II certification exam is a step above the Salesforce Certified Platform Developer I certification and is intended for developers who have advanced knowledge of Salesforce development. PDII Certification validates a developer's ability to design and implement advanced business logic and interfaces using Apex code, Visualforce, and Lightning components.

Use Real Salesforce PDII PDF Questions [2026] - 100% Guaranteed Success

Well preparation is half done, so choosing good PDII training materials is the key of clear exam in your first try with less time and

efforts. Our website offers you the latest preparation materials for the PDII real exam and the study guide for your review. There are three versions according to your study habit and you can practice our PDII Dumps PDF with our test engine that help you get used to the atmosphere of the formal test.

The PDII certification exam consists of 60 multiple-choice questions and is timed for two and a half hours. It is a proctored exam that can be taken online or in-person at a testing center. The passing score for the exam is 63%, and the exam fee is \$400. Platform Developer II certification is valid for three years and can be renewed by passing the latest version of the PDII exam or by completing relevant Trailhead modules.

Salesforce PDII Certification Exam is an advanced-level exam that is intended for experienced developers who have a deep understanding of the Salesforce platform. PDII exam tests the candidate's ability to design and develop complex business logic and interfaces using Apex and Visualforce. Candidates who pass the exam are recognized as experts in the development of custom applications on the Salesforce platform.

Salesforce Platform Developer II Sample Questions (Q157-Q162):

NEW QUESTION # 157

Users upload .csv files in an external system to create account and contact records in Salesforce. Up to 200 records can be created at a time. The users need to wait for a response from Salesforce in the external system, but the data does not need to synchronize between the two systems.

Based on these requirements, which method should a developer use to create the records in Salesforce?

- **A. Bulk API 2.0**
- B. Apex web services
- C. REST API request using composite/tree/
- D. REST API request using composite/vbatch/

Answer: A

NEW QUESTION # 158

What is the transaction limit on the number of "sendEmail" method calls?

- A. 0
- B. 1
- **C. 2**
- D. 3
- E. There is no limit

Answer: C

Explanation:

Explanation

Explanation:

The reserveEmailCapacity methods let you declare how many emails you want to send prior to actually sending, allowing you to handle limit errors prematurely

NEW QUESTION # 159

A developer wrote a trigger on Opportunity that will update a custom Last Sold Date field on the Opportunity's Account whenever an Opportunity is closed. In the test class for the trigger, the assertion to validate the Last Sold Date field fails.

What might be causing the failed assertion?

- A. The test class is not using System.run() to run tests as a Salesforce administrator.
- B. The test class has not implemented seeAllData=true in the test method.
- **C. The test class has not re-queried the Account record after updating the Opportunity.**
- D. The test class has not defined an Account owner when inserting the test data.

Answer: C

Explanation:

The most likely cause of the failed assertion is that the test class has not re-queried the Account record after updating the Opportunity. This means that the test class is still using the old value of the Last Sold Date field, which does not reflect the change made by the trigger. To fix this, the test class should query the Account record again after updating the Opportunity and before asserting the Last Sold Date field. The test class does not need to define an Account owner when inserting the test data, because the owner will be automatically assigned to the running user. The test class does not need to implement `seeAllData=true` in the test method, because this annotation allows the test class to access the org's data, which is not relevant for this scenario. The test class does not need to use `System.runAs()` to run tests as a Salesforce administrator, because this method is used to test the behavior of the code under different user profiles and permissions, which is not the focus of this test case. Reference: [Testing Apex Triggers], [Isolation of Test Data from Organization Data in Unit Tests], [Running Tests as Different Users]

NEW QUESTION # 160

A developer created an Opportunity trigger that updates the account rating when an associated opportunity is considered high value. Current criteria for an opportunity to be considered high value is an amount greater than or equal to \$1,000,000. However, this criteria value can change over time. There is a new requirement to also display high value opportunities in a Lightning web component. Which two actions should the developer take to meet these business requirements, and also prevent the business logic that obtains the high value opportunities from being repeated in more than one place?2021

- A. Call the trigger from the Lightning web25 component.
- **B. Use custom metadata to hold the high value amount.24**
- **C. Create a helper class that fetches the high value opportunities.**
- D. L22eave the business logic code inside the trigger for efficiency.23

Answer: B,C

Explanation:

To build a maintainable and scalable solution, a developer must separate business logic from trigger execution and avoid hard-coding threshold values.

First, the \$1,000,000 threshold should be stored in Custom Metadata (Option B). Custom Metadata is superior to hard-coding or even Custom Settings in this context because the records are deployable and can be queried efficiently without counting against standard SOQL limits. If the business decides to lower the "high value" threshold to \$500,000, an administrator can simply update the Custom Metadata record without requiring any code changes or redeployments.

Second, the logic to identify these opportunities should be moved to a Helper Class (Option D). This follows the "Separation of Concerns" principle. Instead of writing the SOQL query and logic inside the trigger, the trigger calls a method in the helper class. Similarly, the Lightning Web Component's Apex controller can call the exact same method in the helper class. This ensures that the definition of a "high value opportunity" is managed in one single place in the codebase. If the logic becomes more complex (e.g., adding Industry filters), the developer only needs to update the helper class once to satisfy both the trigger and the UI component. Option A leads to "spaghetti code," and Option C is impossible as triggers cannot be called directly from JavaScript or other Apex classes.

NEW QUESTION # 161

What is the transaction limit for the number of records for SOSL?

- A. 200 (synchronous), 100 (async)
- B. 100 (synchronous), 200 (async)
- C. 0
- **D. 2,000**
- E. There is no limit

Answer: D
