CTFL-AT

Behavior-driven development [Chelimsky10] allows a developer to focus on testing the code based on the expected behavior of the software. Because the tests are based on the exhibited behavior of the software, the tests are generally easier for other team members and stakeholders to understand. Specific behavior-driven development frameworks can be used to define acceptance criteria based on the given/when/then format:
Given some initial context,
When an event occurs,
Then ensure some outcomes.

QUESTION 15

An Agile team would like to implement Acceptance test first development. This is the workflow that they follow to implement that.

Create user story->make test cases from user stories-> execute both positive and negative tests-> verify tests-> solve bugs->integrate.

However, while testing, they found out that there were some misunderstanding in the user stories;therefore, the test cases that followed did not reflect what the user originally wanted. What the team should have had done ?

- A. They should have let business representative only to write user stories
- B. Since developers do the coding, they should have written the user stories
- C. Conduct specification workshop where stories are analyzed, discussed and written collaboratively
- D. Acceptance Test Driven development is not suitable for all type of project.

Correct Answer: C

Explanation/Reference:

As per the syllabus page 26: (2.3.2 The Role of a Tester in an Agile Team)

The role of a tester in an Agile team includes activities that generate and provide feedback not only on test status, test progress, and product quality, but also on process quality. In addition to the activities described elsewhere in this syllabus, these activities include:

- Understanding, implementing, and updating the test strategy
- Measuring and reporting test coverage across all applicable coverage dimensions
- Ensuring proper use of testing tools
- Configuring, using, and managing test environments and test data
- Reporting defects and working with the team to resolve them
- Coaching other team members in relevant aspects of testing
- Ensuring the appropriate testing tasks are scheduled during release and iteration planning
- Actively collaborating with developers and business stakeholders to clarify requirements, especially in terms of testability, consistency, and completeness
- Participating proactively in team retrospectives, suggesting and implementing improvements

QUESTION 16

Which of the following statements would you expect to be the MOST direct advantage of the whole-team approach?

2026 ISQI Accurate CTFL-AcT: Relevant ISTQB Foundation Level - Acceptance Testing Exam Dumps

Our company has dedicated ourselves to develop the CTFL-AcT latest practice materials for all candidates to pass the exam easier, also has made great achievement after more than ten years' development. As the certification has been of great value, a right CTFL-AcT exam guide can be your strong forward momentum to help you pass the CTFL-AcT Exam like a hot knife through butter. And our CTFL-AcT exam questions are exactly the right one for you as our high quality of CTFL-AcT learning guide is proved by the high pass rate of more than 98%.

ISQI ISTQB Foundation Level - Acceptance Testing Sample Questions (Q51-Q56):

NEW QUESTION # 51

As a tester you are part of a development team for health monitoring system to record and synchronize various health parameters, calculate health score and provide practical advice on how to maintain and improve health. You are asked to review the acceptance criteria for the following user story:

US23; As a user of the system. I can monitor my blood pressure and obtain alerts in case of excessive pressure, in order to prevent the risk associated with hypertension.

Which of the following is NOT a good example of an acceptance criterion for this requirement?

- A. The system should be developed using Java script framework to allow fast response times
- B. The alert thresholds depend on the following user's personal settings: age, weight and gender
- C. People with hypertension are advised to get their blood pressure checked at least thrice a week
- D. The monitoring system displays the heart rate together with the blood pressure

Answer: A

Explanation:

Acceptance criteria describe what the system must do to fulfill a requirement from the user or business perspective. They must be observable, testable, and relevant to the business outcome or expected behavior.

In this scenario, the user story is about monitoring blood pressure and receiving alerts for excessive pressure.

The acceptance criteria should focus on system behavior, thresholds, and how alerts are triggered based on user settings.

Option D is not a good acceptance criterion because:

It specifies a technical implementation detail (JavaScript framework), which is not the concern of acceptance testing.

Acceptance criteria should not prescribe how the system is built, but what it must do from a business or user point of view.

Other options (A, B, and C) all reflect testable and behavior-focused outcomes linked to the user story's goal.

D). The system should be developed using JavaScript framework to allow fast response times

NEW QUESTION # 52

As an acceptance tester you want to test the \$100 withdrawal process described by the following BPMN model.

You would like to achieve decision coverage. Consider the following test cases: Test 1: balance = \$100, receipt = YES Test 2: balance = \$99 Test 3: balance = \$120, receipt = NO Test 4: balance = \$2500, receipt = YES Which of the following is the minimal set of test cases allowing to achieve full decision coverage?

- A. Test 1, Test 2, Test 3
- B. Test 1, Test 2
- C. Test 1, Test 2, Test 4
- D. Test 2, Test 3

Answer: B

Explanation:

The goal here is to achieve full decision coverage (also known as branch coverage), which means each decision point in the process

must evaluate to both TRUE and FALSE at least once during testing.

From the BPMN ATM withdrawal model, we identify two key decisions:

Is the balance # \$100?

If yes, is receipt = YES?

To achieve full decision coverage:

One test must evaluate decision 1 as TRUE and another as FALSE.

If decision 1 is TRUE, then decision 2 must be exercised both ways (receipt = YES and NO), but for minimal decision coverage, one path through decision 2 is enough.

Analyzing test cases:

Test 1 (balance = \$100, receipt = YES): decision 1 = TRUE, decision 2 = TRUE Test 2 (balance = \$99): decision 1 = FALSE

These two tests ensure:

Decision 1 evaluated TRUE (Test 1) and FALSE (Test 2)

Decision 2 evaluated at least once (receipt = YES in Test 1)

Thus, Test 1 and Test 2 form the minimal set for full decision coverage.

Other options:

C and D are redundant for the minimal set.

A includes an extra test not needed for minimal decision coverage.

NEW QUESTION # 53

Which one of the following combinations of given perspective and statement matches BEST?

- A. From a technical perspective, the number of concurrent user and the types of transactions performed are major elements.
- **B. From a user perspective, missing feedback from the system when processing a request it is a problem.**
- C. From a business perspective, computing power and architecture are major parameters for fine- tuning the system.
- D. From a business perspective, the choice of performance test tools strongly depends on the applied test techniques.

Answer: B

NEW QUESTION # 54

Which of the following activities is most likely performed by the business analyst as part of defect analysis?

- **A. Identify the requirements / user stories that are not satisfied.**
- B. Check, whether other paths in the business process model perform as intended.
- C. Analyze the function that failed step by step to identify the cause of the defect.
- D. Assess the impact of corrective actions on other parts of the system's implementation.

Answer: A

Explanation:

During defect analysis in the context of acceptance testing, the business analyst plays a key role in mapping test results back to business needs and requirements. If a defect is identified during acceptance testing, the business analyst typically evaluates which requirement, user story, or business rule was not fulfilled. This helps determine whether the issue is critical from a business perspective and what corrective action is required.

Option A is correct because it is the primary responsibility of the business analyst to assess unmet requirements or user stories in the event of a defect.

Other options:

B is typically a developer or architect's responsibility, as it involves evaluating the technical impact.

C is part of root cause analysis, usually performed by developers or technical leads.

D refers to broader testing scope and could be part of test analysis but is less specific to the business analyst's role in defect analysis.

NEW QUESTION # 55

Which of the following techniques is most likely applied to ensure the quality of acceptance testing activities?

- A. Checklist-based verification of requirements to ensure their completeness and quality.
- B. Review of the source code to ensure traceability of user stories to system components.
- C. Eye tracking to verify the feasibility of previously defined user acceptance tests.
- **D. Verification of the traceability between user stories and test cases to make sure it is up to date.**

Answer: D

NEW QUESTION # 56
