Practical Dumps 300-720 Download & Leading Offer in Qualification Exams & Top Cisco Securing Email with Cisco Email Security Appliance

Especially for those students who are headaches when reading a book, 300-720 study tool is their gospel. Because doing exercises will make it easier for one person to concentrate, and at the same time, in the process of conducting a mock examination to test yourself, seeing the improvement of yourself will makes you feel very fulfilled and have a stronger interest in learning. 300-720 Guide Torrent makes your learning process not boring at all.

Cisco 300-720 exam covers a range of topics related to securing email with Cisco Email Security Appliance. These topics include email security architecture, message filtering and encryption, content security, email authentication, and email management. Passing 300-720 Exam demonstrates that a professional is capable of designing and implementing secure email solutions using Cisco Email Security Appliance. It also validates their ability to troubleshoot and manage these solutions effectively.

Cisco Securing Email with Cisco Email Security Appliance Sample Questions (Q59-Q64):

NEW QUESTION # 59

An engineer deploys a Cisco Secure Email Gateway appliance with default settings in an organization that permits only standard H feature does not work. Which additional action resolves the issue?

- A. Configure the outbound firewall rule to permit traffic on port 8081
- B. Enable the Use HTTP option under Advanced Settings for File Reputation.
- C. **TP/HTTPS ports outbound and notices that the AMP file reputation**
- D. Enable the Use SSL option under Advanced Settings for File Reputation.
- E. Configure the outbound firewall rule to permit traffic on port 3237

Answer: C

Explanation:

Configuring the outbound firewall rule to permit traffic on port 3237 is the additional action that resolves the issue. AMP file reputation is a feature that allows Cisco ESA to check files attached to messages against a cloud-based database of known malicious files and apply appropriate actions, such as block, deliver, or quarantine.

By default, AMP file reputation uses TCP port 3237 to communicate with the cloud-based database. If this port is blocked by a firewall, AMP file reputation will not work properly.

To resolve this issue, the administrator can configure the outbound firewall rule to permit traffic on port 3237 from Cisco ESA. The other options are not valid actions to resolve the issue, because they do not affect the port used by AMP file reputation.

NEW QUESTION # 60

What is the default behavior of any listener for TLS communication?

- A. preferred
- B. required
- C. preferred-verify
- **D. off**

Answer: D

Explanation:

The default behavior of any listener for TLS communication is B. off. This means that TLS is not allowed for incoming connections to the listener and connections to the listener do not require encrypted Simple Mail Transfer Protocol (SMTP) conversations. This is stated in the web search result 1 . To enable TLS for a listener, you need to configure the Use TLS option in the mail flow policy settings for the listener on the Mail Policies > HAT Overview page 1 . You can choose from three different settings for TLS: No, Preferred, or Required 1 .

NEW QUESTION # 61

What are two phases of the Cisco ESA email pipeline? (Choose two.)

- A. action
- **B. delivery**
- C. reject
- **D. workqueue**
- E. quarantine

Answer: B,D

Explanation:

Reference:

https://www.cisco.com/c/en/us/td/docs/security/esa/esa12-1/user_guide/b_ESA_Admin_Guide_12_1/b_ESA_Admin_Guide_12_1_chapter_011.pdf (p.1)

NEW QUESTION # 62

Drag and drop the steps to configure Cisco ESA to use SPF/SIDF verification from the left into the correct order on the right.

Associate the filter with a nominated incoming mail policy.	step 1
Configure a filter to take necessary action on SPF/SIDF verification results.	step 2
Create a custom mail-flow policy for verifying incoming messages by using SPF/SIDF.	step 3
Test the results of message verification.	step 4
Configure a sendergroup to use the custom mail-flow policy.	step 5

Answer:

Explanation:

Associate the filter with a nominated incoming mail policy.	Create a custom mail-flow policy for verifying incoming messages by using SPF/SIDF.
Configure a filter to take necessary action on SPF/SIDF verification results.	Configure a sendergroup to use the custom mail-flow policy.
Create a custom mail-flow policy for verifying incoming messages by using SPF/SIDF.	Associate the filter with a nominated incoming mail policy.
Test the results of message verification.	Configure a filter to take necessary action on SPF/SIDF verification results.
Configure a sendergroup to use the custom mail-flow policy.	Test the results of message verification.

NEW QUESTION # 63

A Cisco Secure Email Gateway administrator must provide outbound email authenticity and configures a DKIM signing profile to handle this task. What is the next step to allow this organization to use DKIM for their outbound email?

- A. Import the DNS record of the service provider into the Cisco Secure Email Gateway.
- B. Enable the DKIM service checker
- C. Configure the Trusted Sender Group message authenticity policy.
- D. Export the DNS TXT record to provide to the DNS registrar

Answer: D

Explanation:

To use DKIM for outbound email, the administrator must export the DNS TXT record from the Cisco Secure Email Gateway and provide it to the DNS registrar of the domain. This will allow the recipient servers to verify the DKIM signature of the email by querying the DNS record of the sender domain.
