Free PDF Quiz Salesforce - High-quality Test Analytics-DA-201 Answers

BTW, DOWNLOAD part of Actual4Labs Analytics-DA-201 dumps from Cloud Storage: https://drive.google.com/open?id=1uG6RfSeg7vunRYtsxZnOys2WZPKyvalI

It is Analytics-DA-201 exam qualification certification that gives you capital of standing in society and serving your company. Nowadays, using the Internet to study on our Analytics-DA-201 exam questions has been a new trend of making people access to knowledge and capability-building. Our Analytics-DA-201 Preparation materials display a brand-new learning model and a comprehensive knowledge structure on our official exam bank, which aims at improving your technical skills and creating your value to your future.

Salesforce Analytics-DA-201 Exam Syllabus Topics:

Topic	Details
Topic 1	• ABAP Core Data Services and Data Modeling: This section of the exam measures the skills of the SAP ABAP Cloud Developer and covers the fundamental understanding of core data services (CDS) and how to design data models in the SAP ABAP environment. Candidates are expected to know how to define, consume, and optimize CDS views effectively to support application development in the cloud.

Topic 2	• ABAP SQL and Code Pushdown: This section of the exam measures the competencies of the SAP ABAP Cloud Developer related to performance optimization through ABAP SQL and code pushdown techniques. It ensures that the developer understands how to shift logic to the database layer using efficient SQL scripting to enhance performance in data-intensive applications.
Topic 3	• Core ABAP Programming: This part of the exam assesses the foundational programming skills of the SAP S • 4HANA Technical Consultant. It includes knowledge of syntax, control structures, modularization, and internal tables in ABAP. The section aims to validate the candidate's proficiency in writing clean, efficient ABAP code using best practices.
Topic 4	• ABAP RESTful Application Programming Model: This section of the exam evaluates the capabilities of the SAP S • 4HANA Technical Consultant in using the ABAP RESTful Application Programming Model (RAP). It focuses on understanding the structure and components of RAP, including behavior definitions, service bindings, and metadata extension. The goal is to validate the ability to develop modern and scalable applications using RAP.

Test Analytics-DA-201 Answers Exam | Analytics-DA-201 Reliable Test Objectives – 100% free

Do you want to find a good job which brings you high income? Do you want to be an excellent talent? The Analytics-DA-201 certification can help you realize your dream which you long for because the Analytics-DA-201 test prep can prove that you own obvious advantages when you seek jobs and you can handle the job very well. You can learn our Analytics-DA-201 test prep in the laptops or your cellphone and study easily and pleasantly as we have different types, or you can print our PDF version to prepare your exam which can be printed into papers and is convenient to make notes. Studying our Analytics-DA-201 Exam Preparation doesn't take you much time and if you stick to learning you will finally pass the exam successfully.

Salesforce Certified Tableau Data Analyst Sample Questions (Q113-Q118):

NEW QUESTION # 113
You have the following:

Overall Rank and Rank are calculated fields that use the RANK function.
You filter out the sub-category where [Ovorall Rank] - 1.
For which three the sub-categories will the value of Rank change? Choose three.

- A. Bookcases
- B. Copiers
- C. Furnishings
- D. Tables
- E. Chairs
- F. Accessories
- G. Machines
  G Phones

Answer: D,F,G

Explanation:

In Tableau, the RANK function assigns a rank to each row within a partition of the data, based on the value of the field being ranked. It is important to understand that the rank is recalculated whenever the underlying data or the partitioning changes.

In the given scenario, the Overall Rank is based on the Sales figures, while the Rank (presumably) is based on the Sales within the Category. When filtering on the condition where [Overall Rank] - 1, it means we are excluding the sub-category that has an Overall Rank of 2.

Looking at the data:

* Furnishings has an Overall Rank of 8, which does not meet the filter condition ([Overall Rank] - 1).

Therefore, its rank remains the same.

* Tables have an Overall Rank of 3. When the sub-category with an Overall Rank of 2 is removed (Chairs in this case), Tables move up in the overall ranking. However, since Tables are the top-ranked within the Furniture category, their Rank within the category would remain unchanged at 1.

* Chairs have an Overall Rank of 2, which meets the filter condition and thus will be removed from the view. We cannot determine the change in Rank for Chairs because they are filtered out.

* Accessories have an Overall Rank of 5. If any sub-category with a higher Overall Rank (1 to 4) is removed, the rank of Accessories within the Technology category could change because it is currently ranked 3 in its category. With the removal of Phones (Overall Rank 1), the Rank of Accessories could potentially increase.

* Copiers have an Overall Rank of 6, which does not meet the filter condition. Therefore, its rank remains the same.

* Machines have an Overall Rank of 4. If we remove Phones (Overall Rank 1), Machines will move up in the overall ranking and potentially within the Technology category as well, changing its Rank from 2 to 1.

* Phones have an Overall Rank of 1, which does not meet the filter condition of being Overall Rank 2.

Therefore, its rank remains the same.

* Bookcases have an Overall Rank of 7, which does not meet the filter condition. Therefore, its rank remains the same.

Based on this analysis, when the sub-category with an Overall Rank of 2 (Chairs) is removed, the Rank value will change for Tables, Accessories, and Machines, as they will move up in the overall ranking within their respective categories. However, it's important to note that while Tables will move up in the overall ranking, their rank within the Furniture category would not change as they are already at the top. The rank changes for Accessories and Machines are due to the removal of Phones, which is ranked higher overall and within the Technology category.

NEW QUESTION # 114

Below are some of the values in the Order_ID field:

Which calculation should a Data Analyst use to return the two-letter combinations starting with the letter "P" for each of these values?

- A. LEFT(SPLIT([Order_ID], "_", 2), 2)
- B. MID([Order_ID], FIND([Order_ID], "P") + 1, 2)
- C. SPLIT([Order_ID], "_", -2)
- D. FINDNTH([Order_ID], "P*", 1)

Answer: B

NEW QUESTION # 115

You have a data source that contains the following columns.

Name	data type
Order Date	Date
Region	String
State	String
City	String
Sales	Number (decimal)
Profit	Number (decimal)

You have the following view that shows the percentage of total sales by category:

Region	Category	2019	2020	2021	2022
Central	Furniture	20.09%	21.73%	31.00%	27.18%
	Office Supplies	22.15%		27.42%	35.19%
	Technology	19.91%	24.54%	29.85%	25.70%
East	Furniture	22.68%	25.84%	22.27%	29.22%
	Office Supplies	17.50%	20.76%	30.07%	31.67%
	Technology		22.59%	27.36%	32.89%
South	Furniture	22.99%	20.55%	23.80%	32.66%
	Office Supplies	20.66%	24.87%	22.81%	31.65%
	Technology	34.23%	10.76%	24.89%	30.13%
West	Furniture	19.83%	22.57%	29.22%	28.39%
	Office Supplies	23.93%	17.14%	21.59%	37.34%
	Technology	17.84%	17.00%	25.19%	30.00%

You want to change the calculation to show the percentage of total sales within the categories of every region annually. Which Compute Using option should you use? (Click the appropriate Option in the Answer Area.)

Answer:

Explanation:

Explanation:

Answer Area

NEW QUESTION # 116
You conned to a Microsoft SQL Server database
You need to create a custom SQL query that retrieves rows from a table named Students Only students m the city of Berlin must be returned How should you complete the query? (Drag the appropriate Options to the Answer Area and drop into the correct locations.)

Answer:

Explanation:

Explanation:
Select
Where

The correct way to complete the query is:

SELECT * FROM [dbo] . [Students]

WHERE [Students].[City] = 'Berlin'

The SELECT statement is used to retrieve data from a table or a view. The * symbol means that all columns will be returned. The FROM clause specifies the table or view name and the schema name.

The WHERE clause is used to filter the data based on a condition. The condition is [Students].[City] =

'Berlin', which means that only rows where the City column of the Students table is equal to 'Berlin' will be returned.

The other options are not relevant for this query. CAST is a function that converts a value from one data type to another. JOIN is a clause that combines data from two or more tables based on a common field. ON is a keyword that specifies the join condition. UNION is a set operation that combines the results of two or more queries into one result set.

NEW QUESTION # 117

A Data Analyst has a large data source that contains more than 10 million rows. Users can filter the rows by a field named Animal. The following is a sample of the data.

The analyst wants to ensure that every calculation is affected by including only animals of a particular type.

Which type of filter should the analyst create on the worksheet?

- A. Measure
- B. Table calculation
- C. Extract
- D. Context

Answer: D

NEW QUESTION # 118

......

Experts before starting the compilation of " the Analytics-DA-201 latest questions ", has put all the contents of the knowledge point build a clear framework in mind, though it needs a long wait, but product experts and not give up, but always adhere to the effort, in the end, they finished all the compilation. So, you're lucky enough to meet our Analytics-DA-201 Test Guide l, and it's all the work of the experts. If you want to pass the qualifying Analytics-DA-201 exam with high quality, choose our Analytics-DA-201 exam questions. We are absolutely responsible for you. Don't hesitate!
