PrepPDF offers you a free demo version of the SAP C\_ACDET\_2506 Dumps. This way candidates can easily check the validity and reliability of the C\_ACDET\_2506 exam products without having to spend time.

## SAP Certified Associate - Configuring SAP Ariba Strategic Sourcing Suite Sample Questions (Q49-Q54):

#### NEW QUESTION # 49

While working on editing a field for a customer, you notice that "Editable in full Contract Amendment" is not an option available in the advanced tab of field configuration.

What is likely the cause for this behavior? Note: There are 2 correct answers to this question.

- A. The field you are customizing is standard and therefore cannot be changed.
- **B. The contract must be in an amendment state for this option to be visible in customizing**
- **C. The field you are customizing is not in the contract workspace or request classes.**
- D. A customization is in flight and needs to be cleared and reset prior to making this change.

**Answer: B,C**

#### NEW QUESTION # 50

During the configuration of a new custom field, after it's been saved but before the field has been published, you realize that you set the wrong field type. What is the next step you should take to resolve the issue?

- A. Change the field type by selecting the intended type in the dropdown and Save
- **B. Delete the field and create a new field with the same name and the intended field type**
- C. Mark the field as Hidden, and create a new field with a slightly different name and the intended field type
- D. Clear and recreate the field with the same field name and the intended field type

**Answer: B**

Explanation:

Once a custom field has been saved, its field type cannot be changed-even if the field has not yet been published. The correct approach is to delete the incorrect field and create a new one with the intended type, optionally using the same name to maintain naming consistency. Clearing or hiding the field does not solve the issue, and the system does not allow type changes via the UI once saved. This approach is standard in SAP Ariba field management to avoid data integrity issues.

#### NEW QUESTION # 51

In a Greenfield deployment scenario, how should translation migrations be performed for header field labels, help tips, and validity condition error messages?

- A. User with Partner Administrator can configure translation.
- B. Contact an SAP Deployment lead for customization help.
- **C. Translations are included in migrations and are listed as AMLStringResource in the migration UI.**
- D. Create a package to migrate translations by ICM.

**Answer: C**

Explanation:

In Greenfield deployments, translations for custom field labels, help tips, and validation/error messages are migrated as part of the configuration migration package and are represented in the migration UI as AMLStringResource entries. This structured approach ensures all language-specific content is consistently moved alongside configuration settings.

While administrators and deployment leads may support translation tasks, the migration of translation strings is managed automatically via this AML-based mechanism, not through manual reconfiguration or separate ICM packages.

This ensures a seamless multilingual user experience immediately upon go-live without requiring additional manual translation imports.

#### NEW QUESTION # 52

In a Greenfield deployment scenario, how should translation migrations be performed for header field labels, help tips, and validity condition error messages?

- A. User with Partner Administrator can configure translation.
- B. Contact an SAP Deployment lead for customization help.
- C. Create a package to migrate translations by ICM.
- **D. Translations are included in migrations and are listed as AMLStringResource in the migration**

**Answer: D**

### NEW QUESTION # 53

Which syntax is used for writing custom Validity Conditions?

- A. Scheme
- B. Python
- C. XML
- D. Regular expression

**Answer: A**

### NEW QUESTION # 54
