According to the market research, we have found that a lot of people preparing for the Associate-Cloud-Engineer exam want to gain the newest information about the exam. In order to meet all candidates requirement, we compiled such high quality Associate-Cloud-Engineer study materials to help you. It is believed that our products will be very convenient for you, and you will not find the better study materials than our Associate-Cloud-Engineer Exam Question. If you willing spend few hours to learn our study materials, you will pass the exam in a short time. Now we are going to introduce our Associate-Cloud-Engineer test questions to you.

The Google Associate Cloud Engineer certification is designed to measure the candidates' fundamental skills required to perform the deployment, monitoring, and maintenance of projects on Google Cloud. This certificate is a good starting point for those individuals who are new to Cloud and can be used as a stepping stone to the professional-level certifications of this vendor. To get certified, the applicants are required to complete one exam. The qualifying test measures the ability of the specialists to perform the following tasks: setting up the Cloud solution environment; planning and configuring Cloud solutions; deploying and implementing Cloud solutions; ensuring the effective operation of Cloud solutions; and configuring access & security.

## Practice Associate-Cloud-Engineer Test & Associate-Cloud-Engineer New Test Materials

We are sure you can seep great deal of knowledge from our Associate-Cloud-Engineer study prep in preference to other materials obviously. Our Associate-Cloud-Engineer practice materials have variant kinds including PDF, app and software versions. As Associate-Cloud-Engineer Exam Questions with high prestige and esteem in the market, we hold sturdy faith for you. And you will find that our Associate-Cloud-Engineer learning quiz is quite popular among the candidates all over the world.

### Google Associate Cloud Engineer Exam Sample Questions (Q112-Q117):

#### NEW QUESTION # 112

Your customer has implemented a solution that uses Cloud Spanner and notices some read latency-related performance issues on one table. This table is accessed only by their users using a primary key. The table schema is shown below.

□ You want to resolve the issue. What should you do?

- A. Option C
- B. Option A
- C. Option D
- D. Option B

**Answer: A**

Explanation:

As mentioned in Schema and data model, you should be careful when choosing a primary key to not accidentally create hotspots in your database. One cause of hotspots is having a column whose value monotonically increases as the first key part, because this results in all inserts occurring at the end of your key space. This pattern is undesirable because Cloud Spanner divides data among servers by key ranges, which means all your inserts will be directed at a single server that will end up doing all the work.

[https://cloud.](https://cloud.google.com/spanner/docs/schema-design#primary-key-prevent-hotspots)

[google.com/spanner/docs/schema-design#primary-key-prevent-hotspots](https://cloud.google.com/spanner/docs/schema-design#primary-key-prevent-hotspots)

#### NEW QUESTION # 113

You want to configure an SSH connection to a single Compute Engine instance for users in the dev1 group.

This instance is the only resource in this particular Google Cloud Platform project that the dev1 users should be able to connect to. What should you do?

- A. Enable block project wide keys for the instance. Generate an SSH key for each user in the dev1 group. Distribute the keys to dev1 users and direct them to use their third-party tools to connect.
- B. Set metadata to enable-oslogin=true for the instance. Grant the dev1 group the compute.osLogin role. Direct them to use the Cloud Shell to ssh to that instance.
- C. Enable block project wide keys for the instance. Generate an SSH key and associate the key with that instance. Distribute the key to dev1 users and direct them to use their third-party tools to connect.
- D. Set metadata to enable-oslogin=true for the instance. Set the service account to no service account for that instance. Direct them to use the Cloud Shell to ssh to that instance.

**Answer: C**

#### NEW QUESTION # 114

You are managing several Google Cloud Platform (GCP) projects and need access to all logs for the past 60 days. You want to be able to explore and quickly analyze the log contents. You want to follow Google- recommended practices to obtain the combined logs for all projects. What should you do?

- A. Navigate to Stackdriver Logging and select resource.labels.project\_id="\*"
- B. Create a Stackdriver Logging Export with a Sink destination to a BigQuery dataset. Configure the table expiration to 60 days.

- C. Create a Stackdriver Logging Export with a Sink destination to Cloud Storage. Create a lifecycle rule to delete objects after 60 days.
- D. Configure a Cloud Scheduler job to read from Stackdriver and store the logs in BigQuery. Configure the table expiration to 60 days.

**Answer: B**

Explanation:

### NEW QUESTION # 115

You are asked to set up application performance monitoring on Google Cloud projects A, B, and C as a single pane of glass. You want to monitor CPU, memory, and disk. What should you do?

- A. Enable API and then use default dashboards to view all projects in sequence.
- B. Enable API and then give the metrics.reader role to projects A, B, and C.
- **C. Enable API, create a workspace under project A, and then add project B and C.**
- D. Enable API and then share charts from project A, B, and C.

**Answer: C**

### NEW QUESTION # 116

You are storing sensitive information in a Cloud Storage bucket. For legal reasons, you need to be able to record all requests that read any of the stored data. You want to make sure you comply with these requirements. What should you do?

- A. Allow only a single Service Account access to read the data.
- B. Enable the Identity Aware Proxy API on the project.
- C. Scan the bucket using the Data Loss Prevention API.
- **D. Enable Data Access audit logs for the Cloud Storage API.**

**Answer: D**

Explanation:

Data Access logs pertaining to Cloud Storage operations are not recorded by default. You have to enable them.
