2026 Pegasystems Accurate Latest PEGACPSSA23V1 Test Voucher

The Pegasystems PEGACPSSA23V1 exam questions were developed by Real4dumps in three formats. If you take enough practice tests on PEGACPSSA23V1 practice exam software by Real4dumps, you'll be more comfortable when you walk in on

Pegasystems exam day. So, go with PEGACPSSA23V1 Exam Questions that are prepared under the supervision of industry experts to expand your knowledge base and successfully pass the PEGACPSSA23V1 exam on the first attempt.

Pegasystems Certified Pega Senior System Architect 23 Sample Questions (Q66-Q71):

NEW QUESTION # 66

Which three items are generated and displayed in the compliance score of an application? (Choose Three)

- A. Total core rules used in the application
- B. Unweighted compliance score out of 100
- C. Rules with unjustified warnings in the application
- D. Rules with warnings in the application
- E. Percentage of compliant rules in the application

Answer: C,D,E

Explanation:

The compliance score of an application in Pega Platform includes items such as rules with unjustified warnings in the application (A), rules with warnings in the application (D), and the percentage of compliant rules in the application (E). These metrics provide insights into the application's adherence to best practices and guardrails, highlighting areas that may require attention to improve application quality, maintainability, and performance. References: Pega Community documentation on Application Quality Dashboard and compliance scoring.

NEW QUESTION # 67

A global application with infrastructure nodes located throughout the world requires certain operations to start executing at midnight GMT.

Select two possible designs for this use case. (Choose Two)

- A. Use the Run in background step in the case life cycle and design a dedicated queue processor.
- B. Use the Queue-For-Processing method in an activity and design a dedicated queue processor.
- C. Use the Queue-For-Processing method in an activity and design a standard queue processor.
- D. Use the Run in background step in the case life cycle and design a standard queue processor.

Answer: B,C

Explanation:

To start operations at a specific GMT time regardless of where the server is located, you would use the Queue-For-Processing method in an activity. This method adds a task to a queue to be processed either by a standard or a dedicated queue processor. A dedicated queue processor can be configured to operate on a schedule, so it can start processing at midnight GMT. References: Pega SSA course materials on queue processors and timed events.

NEW QUESTION # 68

In which example would you use the application settings feature?

- A. A data page is available across multiple user sessions and is updated once a day.
- B. A manager can update the price of a service without a developer editing the application.
- C. An IT service application stores a list of operating systems using a Pega system of record.
- D. A weather service application points to a web service for weather data.

Answer: B

Explanation:

Application settings are used to point to external resources that can change without requiring changes to the application code. For example, a weather service application might use application settings to specify the URL of a web service for weather data. References: Pega Platform Help - Application Settings.

NEW QUESTION # 69

Which two options do you consider when creating a pre-processing data transform? (Choose Two)

- A. The security setting for the flow action
- B. The timing of the commit for the flow action
- C. The effect if the flow action is reloaded
- D. The potential reuse of the flow action

Answer: C,D

Explanation:

When creating a pre-processing data transform, you should consider the timing of the commit for the flow action and the effect if the flow action is reloaded. These factors can impact how the data transform processes data and how it integrates with the flow action's lifecycle. References: Pega Platform Help - Data Transforms.

NEW QUESTION # 70

The Static Assembler is used to address rules assembly issues due to which cause?

- A. The server is managing a large number of rules caches.
- B. A new application is migrated to the production system.
- C. Access groups contain multiple production rule sets.
- D. The application record lists several branch rule sets.

Answer: A

Explanation:

The Static Assembler is a Pega tool used to address rules assembly issues specifically when the server is managing a large number of rules caches. By pre-assembling rules into a static content, the Static Assembler helps in improving performance in situations where cache management becomes complex due to the volume of rules. It creates a set of static files that represents the assembled rules, which can reduce the overhead on the server during rule assembly and cache management. Reference: Pega official documentation on performance tools and best practices.

NEW QUESTION # 71

.....

You will not only get familiar with the Certified Pega Senior System Architect 23 (PEGACPSSA23V1) exam environment but also enhance your time management skills which will be quite helpful in the final PEGACPSSA23V1 certification exam.
